Tax Considerations in Financial Planning

#6870B
COURSE MATERIAL
TABLE OF CONTENTS

Introduction 1

Part I: Income Tax Considerations in Business Planning and Investments 3

Chapter 1: Tax Treatment of Investment Income 5
   I. Interest Income 5
   II. Discount on Debt Instruments 15
   III. When to Report Interest Income 22
   IV. Dividends and Other distributions 23
   V. Stripped Preferred Stock 31
Chapter 1: Test Your Knowledge 33
Chapter 1: Solutions and Suggested Responses 35

Chapter 2: Deductions of Investment Expenses 37
   I. Limits on Deductions 37
   II. Interest Expenses 38
   III. Expenses of Producing Income 42
   IV. When to Report Investment Expenses 46
Chapter 2: Test Your Knowledge 47
Chapter 2: Solutions and Suggested Responses 49

Chapter 3: Passive and At-Risk Rules 51
   I. Passive Activity Limitations 51
   II. At-Risk Rules 59
Chapter 3: Test Your Knowledge 67
Chapter 3: Solutions and Suggested Responses 69

Chapter 4: Basis of Investment Property 71
   I. Basis of Investment Property 71
   II. Wash Sales 78
Chapter 4: Test Your Knowledge 83
Chapter 4: Solutions and Suggested Responses 85

Chapter 5: Sale of a Home 87
   I. Introduction and Overview 87
   II. Main Home 87
   III. Figuring Gain or Loss 88
   IV. Determining Basis 93
   V. Excluding the Gain 95
   VI. Business Use or Rental Of Home 100
   VII. Special Situations 101
   VIII. Recapturing a Federal Mortgage Subsidy 102
Chapter 5: Test Your Knowledge 103
Chapter 5: Solutions and Suggested Responses 105
# Table of Contents

## Chapter 6: Rental Income and Expenses  
I. Rental Income and Expenses  
II. Personal Use of a Dwelling (Vacation Homes)  
III. Depreciation  

## Chapter 6: Test Your Knowledge  

## Chapter 6: Solutions and Suggested Responses  

## Chapter 7: Mutual Fund Distributions  
I. An Overview of Mutual Funds  
II. Fees and Expenses  
III. Tax Consequences of Mutual Funds  
IV. Tracking Basis  
V. Sales, Exchanges and Redemptions  

## Chapter 7: Test Your Knowledge  

## Chapter 7: Solutions and Suggested Responses  

## Chapter 8: Taxation of Business Entities  
I. Introduction and Overview  
II. Disregarded Entities: The Limited Liability Company  
III. Partnerships  
IV. Corporations  
V. Subchapter S Corporations  

## Chapter 8: Test Your Knowledge  

## Chapter 8: Solutions and Suggested Responses  

## Chapter 9: Alternative Minimum Tax  
I. Alternative Minimum Tax basics  
II. Other Provisions That Affect AMT  
III. Minimum Tax Credit  
IV. How the AMT Is Calculated  

## Chapter 9: Test Your Knowledge  

## Chapter 9: Solutions and Suggested Responses  

## Chapter 10: Tax Implications of Marriage and Divorce  
I. Distinguishing Community and Separate Property  
II. Federal Taxation: Community or Separate Property Income  

## Chapter 10: Test Your Knowledge  

## Chapter 10: Solutions and Suggested Responses  

## Part II: Income Tax Considerations in Retirement Planning  

## Chapter 11: Employer-Sponsored Retirement Plans  
I. Introduction and Overview  
II. Simplified Employee Pension (SEP) Plans  
III. SIMPLE Plans  
IV. Qualified Plans

INTRODUCTION

Financial planning and income tax considerations go hand-in-hand. When a young couple is deciding whether to buy their first home or deciding how to save for their children’s college education, federal income tax considerations are inevitably part of the equation. In planning for retirement, for example, people generally try to put as much money away pre-tax as possible. What are the various ways to achieve this? What are the tax implications if the individual needs the money before retirement?

These are just a few of the key questions addressed by this course. Any type of investment decision or financial plan must include an analysis of many factors, including the risk of the investment, the individual or couple’s short term and long term financial needs, and, of course, the tax implications.

This course is divided into three sections. The first section looks at a number of issues involving the implications of income tax in various types of investment decisions, including real property and mutual fund investments. This section also looks at the important issues of the alternative minimum tax and the passive and at-risk rules.

Section two addresses income tax considerations in retirement planning. It focuses on Individual Retirement Arrangements and other employer-sponsored plans that allow workers to save money for retirement with pre-tax dollars. This section also addresses the potential income tax considerations of social security benefits.

Section three looks at income tax considerations in estate and education planning. It focuses on recent changes in the estate tax rates, tax benefits for survivors, the role of life insurance in financial planning, and methods of saving for education with pre-tax monies.
PART I: INCOME TAX CONSIDERATIONS IN BUSINESS PLANNING AND INVESTMENTS
Chapter Objective

After completing this chapter, you should be able to:

- Recognize the proper tax treatment for various types of investment income.

No investment advisor or financial professional can properly recommend any particular investment or investment strategy without a thorough understanding of its tax consequences. This chapter provides information on the tax treatment of investment income. Investment income generally includes interest, dividends, capital gains, and other types of distributions.

I. INTEREST INCOME

In general, any interest that an individual receives or that is credited to an individual's account and can be withdrawn is taxable income.

A. TAXABLE INTEREST – GENERAL

Taxable interest includes interest individuals receive from bank accounts, loans they make to others, and other sources. The following are some sources of taxable interest.

1. Dividends That Are Actually Interest

Certain distributions commonly called dividends are actually interest. Persons must report as interest so-called “dividends” on deposits or on share accounts in:

- Cooperative banks;
- Credit unions;
- Domestic building and loan associations;
- Domestic savings and loan associations;
- Federal savings and loan associations, and
- Mutual savings banks.

The “dividends” will be shown as interest on Form 1099-INT.
2. Money Market Funds

Money market funds are offered by nonbank financial institutions, such as mutual funds and stock brokerage houses, and pay dividends. Generally, amounts received from money market funds should be reported as dividends, not as interest.

3. Certificates of Deposit and Other Deferred Interest Accounts

When one of these accounts is opened, interest may be paid at fixed intervals of 1 year or less during the term of the account. This generally must be included as interest income when it is actually received or when the individual is entitled to receive it without paying a substantial penalty. The same is true for accounts that mature in 1 year or less and pay interest in a single payment at maturity.

a. Interest Subject to Penalty for Early Withdrawal

If funds are withdrawn from a deferred interest account before maturity, the owner may have to pay a penalty. Individuals must report the total amount of interest paid or credited to their account during the year, without subtracting the penalty.

b. Money Borrowed to Invest in Certificate of Deposit

The interest paid on money borrowed from a bank or savings institution to meet the minimum deposit required for a certificate of deposit from the institution and the interest earned on the certificate are two separate items. Individuals must report the total interest earned on the certificate as income. If the individual itemizes deductions, he or she can deduct the interest paid as investment interest, up to the amount of his or her net investment income.

Example

Jane deposited $5,000 with a bank and borrowed $5,000 from the bank to make up the $10,000 minimum deposit required to buy a 6-month certificate of deposit. The certificate earned $575 at maturity in 2016, but Jane received only $265, which represented the $575 Jane earned minus $310 interest charged on her $5,000 loan. The bank gives Jane a Form 1099-INT for 2016 showing the $575 interest earned. The bank also gives Jane a statement showing that she paid $310 interest for 2016. Jane must include the $575 in income. If she itemizes her deductions on Schedule A (Form 1040), she can deduct $310, subject to the net investment income limit.

4. Interest on Insurance Dividends

Interest on insurance dividends left on deposit with an insurance company that can be withdrawn annually is taxable to the individual in the year it is credited to his or her account. However, if the individual can withdraw it only on the anniversary date of the policy (or other specified date), the interest is taxable in the year that date occurs.
5. **Prepaid Insurance Premiums**

Any increase in the value of prepaid insurance premiums, advance premiums, or premium deposit funds is interest if it is applied to the payment of premiums due on insurance policies or made available for an individual to withdraw.

6. **U.S. Obligations**

Interest on U.S. obligations, such as U.S. Treasury bills, notes and bonds, issued by any agency or instrumentality of the United States is taxable for federal income tax purposes.

7. **Interest on Tax Refunds**

Interest received on tax refunds is taxable income.

8. **Installment Sale Payments**

If a contract for the sale or exchange of property provides for deferred payments, it also usually provides for interest payable with the deferred payments. That interest is taxable when it is received. If little or no interest is provided for in a deferred payment contract, part of each payment may be treated as interest.

9. **Interest on Annuity Contract**

Accumulated interest on an annuity contract sold before its maturity date is taxable.

10. **Bonds Traded Flat**

If an individual buys a bond at a discount when interest has been defaulted or when the interest has accrued but has not been paid, that interest is not income and is not taxable as interest if paid later. When the individual receives a payment of that interest, it is a return of capital that reduces the remaining cost basis. Interest that accrues after the date of purchase, however, is taxable interest income for the year received or accrued.

**B. BELOW-MARKET LOANS**

If someone makes a below-market gift or demand loan, he or she must report as interest income any forgone interest from that loan. If an individual receives a below-market loan, he or she may be able to deduct the forgone interest as well as any interest that was actually paid, but not if it is personal interest. The rules for below-market loans apply to:

- Gift loans;
- Pay-related loans;
- Corporation-shareholder loans;
- Tax-avoidance loans, and
- Certain loans to qualified continuing care facilities under a continuing care contract.
A *pay-related loan* is any below-market loan between an employer and an employee or between an independent contractor and a person for whom the contractor provides services.

A *tax-avoidance loan* is any below-market loan where the avoidance of federal tax is one of the main purposes of the interest arrangement.

The rules that apply to a below-market loan depend on whether the loan is a gift loan, demand loan, or term loan:

- A gift loan is any below-market loan where the forgone interest is in the nature of a gift.
- A demand loan is a loan payable in full at any time upon demand by the lender. A demand loan is a below-market loan if no interest is charged or if interest is charged at a rate below the applicable federal rate.

A demand loan or gift loan that is a below-market loan is generally treated as an arm’s-length transaction in which the lender is treated as having made:

- A loan to the borrower in exchange for a note that requires the payment of interest at the applicable federal rate; and
- An additional payment to the borrower in an amount equal to the forgone interest.

The borrower is generally treated as transferring the additional payment back to the lender as interest. The lender must report that amount as interest income. The lender’s additional payment to the borrower is treated as a gift, dividend, contribution to capital, pay for services, or other payment, depending on the substance of the transaction. The borrower may have to report this payment as taxable income, depending on its classification. These transfers are considered to occur annually, generally on December 31.

A term loan is any loan that is not a demand loan. A term loan is a below-market loan if the amount of the loan is more than the present value of all payments due under the loan.

A lender who makes a below-market term loan other than a gift loan is treated as transferring an additional lump-sum cash payment to the borrower (as a dividend, contribution to capital, etc.) on the date the loan is made. The amount of this payment is the amount of the loan minus the present value, at the applicable federal rate, of all payments due under the loan. An equal amount is treated as original issue discount (OID). The lender must report the annual part of the OID as interest income. The borrower may be able to deduct the OID as interest expense. The following are exceptions to the below-market loan rule:

- The rules for below-market loans do not apply to any day on which the total outstanding amount of loans between the borrower and lender is $10,000 or less. This exception applies only to:
  - Gift loans between individuals if the gift loan is not directly used to buy or carry income-producing assets, and
• Pay-related loans or corporation-shareholder loans if the avoidance of federal
tax is not a principal purpose of the interest arrangement.

This exception does not apply to a term loan described above that previously has been
subject to the below-market loan rules. Those rules will continue to apply even if the
outstanding balance is reduced to $10,000 or less.

• Loans to qualified continuing care facilities under continuing care contracts are not subject
to the rules for below-market loans for the calendar year if the lender or the lender’s
spouse is 62 or older at the end of the year.

• Loans are excluded from the below-market loan rules if their interest arrangements do
not have a significant effect on the federal tax liability of the borrower or the lender. These
loans include:
  ▫ Loans made available by the lender to the general public on the same terms
    and conditions that are consistent with the lender’s customary business
    practice;
  ▫ Loans subsidized by a federal, state, or municipal government that are made
    available under a program of general application to the public;
  ▫ Certain employee-relocation loans;
  ▫ Certain loans from a foreign person, unless the interest income would be
effectively connected with the conduct of a U.S. trade or business and would
not be exempt from U.S. tax under an income tax treaty;
  ▫ Gift loans to a charitable organization, contributions to which are deductible,
if the total outstanding amount of loans between the organization and lender
is $250,000 or less at all times during the tax year; and
  ▫ Other loans on which the interest arrangement can be shown to have no
significant effect on the federal tax liability of the lender or the borrower.

All the facts and circumstances are used to determine if the interest
arrangement has a significant effect on the federal tax liability of the lender or
borrower. Some factors to be considered are:
  • Whether items of income and deduction generated by the loan offset
each other;
  • The amount of these items;
  • The cost to the individual of complying with the below-market loan
rules, if they were to apply; and
  • Any reasons other than taxes for structuring the transaction as a
below-market loan.
If someone structures a transaction to meet this exception, and one of the principal purposes of structuring the transaction in that way is the avoidance of federal tax, the loan will be considered a tax-avoidance loan and this exception will not apply.

For gift loans between individuals, if the outstanding loans between the lender and borrower total $100,000 or less, the forgone interest to be included in income by the lender and deducted by the borrower is limited to the amount of the borrower’s net investment income for the year. If the borrower’s net investment income is $1,000 or less, it is treated as zero. This limit does not apply to a loan if the avoidance of federal tax is one of the main purposes of the interest arrangement.

C. EXCEPTIONS

1. Exempt-Interest Dividends

Exempt-interest dividends received from a mutual fund or other regulated investment company, including those received from a qualified fund of funds in any tax year beginning after December 22, 2010, are not included in taxable income.

Exempt-interest dividends should be shown in box 10 of Form 1099-DIV. Individuals do not reduce their basis for distributions that are exempt-interest dividends.

Although exempt-interest dividends are not taxable, individuals must show them on their tax return if they have to file. This is an information reporting requirement and does not change the exempt-interest dividends into taxable income.

2. Interest on VA Dividends

Interest on insurance dividends that are left on deposit with the Department of Veterans Affairs (VA) is not taxable. This includes interest paid on dividends on converted United States Government Life Insurance policies and on National Service Life Insurance policies.

3. Individual Retirement Arrangements (IRAs)

Interest on a Roth IRA generally is not taxable. Interest on a traditional IRA is tax deferred. Individuals generally do not include it in their income until they make withdrawals from the IRA.

D. U.S. TREASURY BILLS, NOTES, AND BONDS

Treasury bills, notes, and bonds are direct debts of the U.S. Government. Interest income from Treasury bills, notes, and bonds is subject to federal income tax, but is exempt from all state and local income taxes. Investors should receive Form 1099-INT showing the amount of interest (in box 3) that was paid to them each year.

Payments of principal and interest generally will be credited to an investor’s designated checking or savings account by direct deposit through the TreasuryDirect system.
1. **Treasury Bills**

These bills generally have a 4-week, 13-week, 26-week, or 52-week maturity period. They are issued at a discount in the amount of $100 and multiples of $100. The difference between the discounted price an investor pays for the bills and the face value he or she receives at maturity is interest income. Generally, investors must report this interest income when the bill is paid at maturity.

If an investor reinvests his or her Treasury bill at its maturity in a new Treasury bill, note, or bond, he or she will receive payment for the difference between the proceeds of the maturing bill (par amount less any tax withheld) and the purchase price of the new Treasury security. However, the investor must report the full amount of the interest income on each of his or her Treasury bills at the time it reaches maturity.

2. **Treasury Notes and Bonds**

Treasury notes have maturity periods of more than 1 year, ranging up to 10 years. Maturity periods for Treasury bonds are longer than 10 years. Both of these Treasury issues generally are issued in denominations of $100 to $1 million. Both notes and bonds generally pay interest every 6 months. Generally, investors report this interest for the year paid. When the notes or bonds mature, investors can redeem these securities for face value.

Treasury notes and bonds are usually sold by auction. Two types of bids are accepted: competitive bids and noncompetitive bids. If an investor makes a competitive bid and a determination is made that the purchase price is less than the face value, the investor will receive a refund for the difference between the purchase price and the face value. This amount is considered the original issue discount. However, the original issue discount rules do not apply if the discount is less than one-fourth of 1% (.0025) of the face amount multiplied by the number of full years from the date of original issue to maturity. If the purchase price is determined to be more than the face amount, the difference is a premium.

If an investor sells a bond between interest payment dates, part of the sales price represents interest accrued to the date of sale. The investor must report that part of the sales price as interest income for the year of sale.

If an investor buys a bond between interest payment dates, part of the purchase price represents interest accrued before the date of purchase. When that interest is paid, the investor must treat it as a return of his or her capital investment, rather than interest income, by reducing his or her basis in the bond.

**E. STATE OR LOCAL GOVERNMENT OBLIGATIONS**

Interest received on an obligation issued by a state or local government is generally not taxable. The issuer should be able to tell investors whether the interest is taxable. The issuer should also give investors a periodic (or year-end) statement showing the tax treatment of the obligation.

Even if interest on the obligation is not subject to income tax, investors may have to report a capital gain or loss when it is sold. Estate, gift, or generation-skipping tax may apply to other dispositions of the obligation.
1. **Tax-Exempt Interest**

Interest on a bond used to finance government operations generally is not taxable if the bond is issued by a state, the District of Columbia, a U.S. possession, or any of their political subdivisions. Political subdivisions include:

- Port authorities;
- Toll road commissions;
- Utility services authorities;
- Community redevelopment agencies; and
- Qualified volunteer fire departments (for certain obligations issued after 1980).

There are other requirements for tax-exempt bonds. Investors should contact the issuing state or local government agency or see §§ 103 and 141 through 150 of the Internal Revenue Code and the related regulations.

**a. Obligations That Are Not Bonds**

Interest on a state or local government obligation may be tax exempt even if the obligation is not a bond. For example, interest on a debt evidenced only by an ordinary written agreement of purchase and sale may be tax exempt. Also, interest paid by an insurer on default by the state or political subdivision may be tax exempt.

**b. Registration Requirement**

A bond issued after June 30, 1983, generally must be in registered form for the interest to be tax exempt.

**c. Indian Tribal Government**

Bonds issued after 1982 by an Indian tribal government are treated as issued by a state. Interest on these bonds is generally tax exempt if the bonds are part of an issue of which substantially all of the proceeds are to be used in the exercise of any essential government function. However, interest on private activity bonds (other than certain bonds for tribal manufacturing facilities) is taxable.

**d. Original Issue Discount**

Original issue discount (OID) on tax-exempt state or local government bonds is treated as tax-exempt interest.

**e. Information Reporting Requirement**

Investors are required to show any tax-exempt interest received on their tax return. This is an information-reporting requirement only; it does not change tax-exempt interest to taxable interest.

2. **Taxable Interest**

Interest on some state or local obligations is taxable.
a. Federally Guaranteed Bonds

Interest on federally guaranteed state or local obligations issued after 1983 is generally taxable. This rule does not apply to interest on obligations guaranteed by the following U.S. Government agencies:

- Bonneville Power Authority (if the guarantee was under the Northwest Power Act as in effect on July 18, 1984);
- Department of Veterans Affairs;
- Federal home loan banks. (The guarantee must be made after July 30, 2008, in connection with the original bond issue during the period beginning on July 30, 2008, and ending on December 31, 2010 (or a renewal or extension of a guarantee so made) and the bank must meet safety and soundness requirements.)
- Federal Home Loan Mortgage Corporation;
- Federal Housing Administration;
- Federal National Mortgage Association;
- Government National Mortgage Corporation;
- Resolution Funding Corporation; and
- Student Loan Marketing Association.

b. Mortgage Revenue Bonds

The proceeds of these bonds are used to finance mortgage loans for homebuyers. Generally, interest on state or local government home mortgage bonds issued after April 24, 1979, is taxable unless the bonds are qualified mortgage bonds or qualified veterans’ mortgage bonds.

c. Arbitrage Bonds

Interest on arbitrage bonds issued by state or local governments after October 9, 1969, is taxable. An arbitrage bond is a bond in which any portion of the proceeds is expected to be used to buy (or to replace funds used to buy) higher yielding investments. A bond is treated as an arbitrage bond if the issuer intentionally uses any part of the proceeds of the issue in this manner.

d. Private Activity Bonds

Interest on a private activity bond that is not a qualified bond (defined below) is taxable. Generally, a private activity bond is part of a state or local government bond issue that meets both of the following requirements:

- More than 10% of the proceeds of the issue is to be used for a private business use; and.
- More than 10% of the payment of the principal or interest is:
- Secured by an interest in property to be used for a private business use (or payments for this property), or
- Derived from payments for property (or borrowed money) used for a private business use.

Also, a bond is generally considered a private activity bond if the amount of the proceeds to be used to make or finance loans to persons other than government units is more than 5% of the proceeds or $5 million (whichever is less).

i. Qualified Bond

Interest on a private activity bond that is a qualified bond is tax exempt. A qualified bond is an exempt-facility bond (including an enterprise zone facility bond, New York Liberty bond, a Midwestern disaster area bond, a Hurricane like disaster area bond, a Gulf Opportunity Zone bond treated as an exempt-facility bond, or any recovery zone facility bond issued after February 17, 2009, and before January 1, 2012), qualified student loan bond, qualified small issue bond (including a tribal manufacturing facility bond), qualified redevelopment bond, qualified mortgage bond, qualified veterans’ mortgage bond, or qualified 501(c)(3) bond (a bond issued for the benefit of certain tax-exempt organizations).

Interest received on these tax-exempt bonds, if issued after August 7, 1986, generally is a “tax preference item” and may be subject to the alternative minimum tax.

The interest on the following bonds is not a tax preference item and is not subject to the alternative minimum tax.

- Qualified 501(c)(3) bonds.
- New York Liberty bonds.
- Gulf Opportunity Zone bonds.
- Midwestern disaster area bonds.
- Hurricane Ike disaster area bonds.
- Exempt facility bonds issued after July 30, 2008.
- Qualified mortgage bonds issued after July 30, 2008.
- Qualified veterans’ mortgage bonds issued after July 30, 2008.

ii. Qualified bonds issued in 2009 or 2010

The interest on any qualified bond issued in 2009 or 2010 is not a tax preference item and is not subject to the alternative minimum tax. For this purpose, a refunding bond (whether a current or advanced refunding) is treated as issued on the date the refunded bond was issued (or on the date the original bond was issued in the case of a series of refundings). However, this rule does not apply to any refunding bond issued to refund any qualified bond issued during 2004 through 2008 or after 2010.
iii. Qualified bonds issued after December 31, 2010

A portion of the interest on specified private activity bonds issued after December 31, 2010, may be a tax preference item subject to the alternative minimum tax. The tax preference status will apply to the portion of the interest that remains after reducing it by deductions that would be allowed if the interest were taxable.

iv. Enterprise Zone Facility Bonds

Interest on certain private activity bonds issued by a state or local government to finance a facility used in an empowerment zone or enterprise community is tax exempt.

v. New York Liberty Bonds

New York Liberty bonds are bonds issued after March 9, 2002, to finance the construction and rehabilitation of real property in a newly designated “Liberty Zone” of New York City. Interest on these bonds issued before 2014 is tax exempt.

e. Market Discount

Market discount on a tax-exempt bond is not tax-exempt. If an investor bought the bond after April 30, 1993, he or she can choose to accrue the market discount over the period he or she owns the bond and include it in his or her income currently, as taxable interest. If the investor does not make that choice, or if he or she bought the bond before May 1, 1993, any gain from market discount is taxable when he or she disposes of the bond.

II. DISCOUNT ON DEBT INSTRUMENTS

In general, a debt instrument, such as a bond, note, debenture, or other evidence of indebtedness, that bears no interest or bears interest at a lower than current market rate will usually be issued at less than its face amount. This discount is, in effect, additional interest income.

The following are some of the types of discounted debt instruments:

• U.S. Treasury bonds;
• Corporate bonds;
• Municipal bonds;
• Certificates of deposit;
• Notes between individuals;
• Stripped bonds and coupons; and
• Collateralized debt obligations (CDOs).
The discount on these instruments (except municipal bonds) is taxable in most instances. The discount on municipal bonds generally is not taxable.

A. ORIGINAL ISSUE DISCOUNT (OID)

OID is a form of interest. Investors generally include OID in their income as it accrues over the term of the debt instrument, whether or not they receive any payments from the issuer. A debt instrument generally has OID when the instrument is issued for a price that is less than its stated redemption price at maturity. OID is the difference between the stated redemption price at maturity and the issue price.

All debt instruments that pay no interest before maturity are presumed to be issued at a discount. Zero coupon bonds are one example of these instruments. The OID accrual rules generally do not apply to short-term obligations (those with a fixed maturity date of 1 year or less from date of issue).

Investors can treat the discount as zero if it is less than one-fourth of 1% (.0025) of the stated redemption price at maturity multiplied by the number of full years from the date of original issue to maturity. This small discount is known as “de minimis” OID.

**Examples**

*Example 1.* Edward bought a 10-year bond with a stated redemption price at maturity of $1,000, issued at $980 with OID of $20. One-fourth of 1% of $1,000 (stated redemption price) times 10 (the number of full years from the date of original issue to maturity) equals $25. Because the $20 discount is less than $25, the OID is treated as zero. (If Edward holds the bond at maturity, he will recognize $20 ($1,000 - $980) of capital gain.)

*Example 2.* The facts are the same as in Example 1, except that the bond was issued at $950. The OID is $50. Because the $50 discount is more than the $25 figured in Example 1, Edward must include the OID in income as it accrues over the term of the bond.

If an investor buys a debt instrument with de minimis OID at a premium, the discount is not includible in his or her income. If an investor buys a debt instrument with de minimis OID at a discount, the discount is reported under the market discount rules.

The OID rules discussed here do not apply to the following debt instruments:

- Tax-exempt obligations;
- U.S. savings bonds;
- Short-term debt instruments (those with a fixed maturity date of not more than 1 year from the date of issue);
- Obligations issued by an individual before March 2, 1984;
• Loans between individuals, if all the following are true:
  ▫ The lender is not in the business of lending money;
  ▫ The amount of the loan, plus the amount of any outstanding prior loans between the same individuals, is $10,000 or less; and
  ▫ Avoiding any federal tax is not one of the principal purposes of the loan.

1. Premium

An investor is considered to have bought a debt instrument at a premium if its adjusted basis immediately after purchase was greater than the total of all amounts payable on the instrument after the purchase date, other than qualified stated interest.

If an investor bought an OID debt instrument at a premium, he or she generally does not have to report any OID as ordinary income.

2. Acquisition Premium

An investor is considered to have bought a debt instrument at an acquisition premium if both of the following are true:

• The investor did not pay a premium; and
• The instrument’s adjusted basis immediately after purchase (including purchase at original issue) was greater than its adjusted issue price. This is the issue price plus the OID previously accrued, minus any payment previously made on the instrument other than qualified stated interest.

Acquisition premium reduces the amount of OID includible in an investor’s income.

B. CERTIFICATES OF DEPOSIT (CDs)

Individuals who buy a CD with a maturity of more than 1 year must include in income each year a part of the total interest due and report it in the same manner as other OID.

This also applies to similar deposit arrangements with banks, building and loan associations, etc., including:

• Time deposits;
• Bonus plans;
• Savings certificates;
• Deferred income certificates;
• Bonus savings certificates; and
• Growth savings certificates.
1. **Bearer CDs**

CDs issued after 1982 generally must be in registered form. Bearer CDs are CDs that are not in registered form. They are not issued in the depositor’s name and are transferable from one individual to another. Banks must provide the IRS and the person redeeming a bearer CD with a Form 1099-INT.

2. **Time Deposit Open Account Arrangement**

This is an arrangement with a fixed maturity date in which an investor makes deposits on a schedule arranged between him and his bank. But, there is no actual or constructive receipt of interest until the fixed maturity date is reached. For instance, if an investor and his bank enter into an arrangement under which the investor agrees to deposit $100 each month for a period of 5 years, interest will be compounded twice a year at 7 1/2%, but payable only at the end of the 5-year period. The investor must include a part of the interest in his or her income as OID each year. Each year the bank must give the investor a Form 1099-OID to show the amount the investor must include in his or her income for the year.

3. **Redemption Before Maturity**

If, before the maturity date, an investor redeems a deferred interest account for less than its stated redemption price at maturity, the investor can deduct the amount of OID that he or she previously included in income but did not receive.

4. **Renewable Certificates**

If an investor renews a CD at maturity, it is treated as a redemption and a purchase of a new certificate. This is true regardless of the terms of renewal.

**C. FACE-AMOUNT CERTIFICATES**

These certificates are subject to the OID rules. They are a form of endowment contracts issued by insurance or investment companies for either a lump-sum payment or periodic payments, with the face amount becoming payable on the maturity date of the certificate.

In general, the difference between the face amount and the amount an investor paid for the contract is OID. Investors must include a part of the OID in their income over the term of the certificate. The issuer must provide the investor with a statement on Form 1099-OID indicating the amount he or she must include in his or her income each year.

**D. INFLATION-INDEXED DEBT INSTRUMENTS**

If an investor holds an inflation-indexed debt instrument (other than a series I U.S. savings bond), he or she must report as OID any increase in the inflation-adjusted principal amount of the instrument that occurs while he or she held the instrument during the year. In general, an inflation-indexed debt instrument is a debt instrument on which the payments are adjusted for inflation and deflation (such as Treasury Inflation-Protected Securities). Investors should receive Form 1099-OID from the payer showing the amount they must report as OID and any qualified stated interest paid to them during the year.
E. STRIPPED BONDS AND COUPONS

If an investor strips one or more coupons from a bond and sells the bond or the coupons, the bond and coupons are treated as separate debt instruments issued with OID.

The holder of a stripped bond has the right to receive the principal (redemption price) payment. The holder of a stripped coupon has the right to receive interest on the bond.

Stripped bonds and stripped coupons include:

- Zero coupon instruments available through the Department of the Treasury’s Separate Trading of Registered Interest and Principal of Securities (STRIPS) program and government-sponsored enterprises such as the Resolution Funding Corporation and the Financing Corporation; and

- Instruments backed by U.S. Treasury securities that represent ownership interests in those securities, such as obligations backed by U.S. Treasury bonds that are offered primarily by brokerage firms.

1. Seller

If an investor strips coupons from a bond and sells the bond or coupons, the investor must include in income the interest that accrued while he or she held the bond before the date of sale to the extent the investor did not previously include this interest in his or her income. For an obligation acquired after October 22, 1986, investors must also include the market discount that accrued before the date of sale of the stripped bond (or coupon) to the extent they did not previously include this discount in their income.

Investors also must add the interest and market discount that they include in income to the basis of the bond and coupons. This adjusted basis must be allocated between the items the investor keeps and the items he or she sells, based on the fair market value of the items. The difference between the sale price of the bond (or coupon) and the allocated basis of the bond (or coupon) is the investor's gain or loss from the sale.

Investors should also treat any item they keep as an OID bond originally issued and bought by them on the sale date of the other items. If the investor keeps the bond, he or she must treat the amount of the redemption price of the bond that is more than the basis of the bond as the OID. If the investor keeps the coupons, he or she must treat the amount payable on the coupons that is more than the basis of the coupons as the OID.

2. Buyer

If an investor buys a stripped bond or stripped coupon, he or she must treat it as if it were originally issued on the date it is purchased. If the investor buys a stripped bond, the investor should treat as OID any excess of the stated redemption price at maturity over the purchase price. If he or she buys a stripped coupon, the investor should treat as OID any excess of the amount payable on the due date of the coupon over the purchase price.
3. **Figuring OID**

The rules for figuring OID on stripped bonds and stripped coupons depend on the date the debt instruments were purchased, not the date issued.

**F. MARKET DISCOUNT BONDS**

A market discount bond is any bond having market discount except:

- Short-term obligations (those with fixed maturity dates of up to 1 year from the date of issue);
- Tax-exempt obligations that were bought before May 1, 1993;
- U.S. savings bonds; and
- Certain installment obligations.

Market discount arises when the value of a debt obligation decreases after its issue date, generally because of an increase in interest rates. If an investor buys a bond on the secondary market, it may have market discount.

When an investor buys a market discount bond, he or she can choose to accrue the market discount over the period he or she owns the bond and includes it in his or her income currently as interest income. If the investor does not make this choice, the following rules generally apply:

- The investor must treat any gain when he or she disposes of the bond as ordinary interest income, up to the amount of the accrued market discount;
- The investor must treat any partial payment of principal on the bond as ordinary interest income, up to the amount of the accrued market discount;
- If the investor borrows money to buy or carry the bond, his or her deduction for interest paid on the debt is limited.

1. **Market Discount**

Market discount is the amount of the stated redemption price of a bond at maturity that is more than the investor’s basis in the bond immediately after he or she acquires it. Investors must treat market discount as zero if it is less than one-fourth of 1% (.0025) of the stated redemption price of the bond multiplied by the number of full years to maturity (after the bond is acquired).

If a market discount bond also has OID, the market discount is the sum of the bond’s issue price and the total OID includible in the gross income of all holders (for a tax-exempt bond, the total OID that accrued) before they acquired the bond, reduced by their basis in the bond immediately after they acquired it.

2. **Bonds Acquired at Original Issue**

Generally, a bond that is acquired at original issue is not a market discount bond. If the investor’s adjusted
basis in a bond is determined by reference to the adjusted basis of another person who acquired the bond at original issue, the investor is also considered to have acquired it at original issue.

A bond acquired at original issue can be a market discount bond if either of the following is true:

- The investor’s cost basis in the bond is less than the bond’s issue price; or
- The bond is issued in exchange for a market discount bond under a plan of reorganization. (This does not apply if the bond is issued in exchange for a market discount bond issued before July 19, 1984, and the terms and interest rates of both bonds are the same.)

The accrued market discount is figured in one of two ways.

- **Ratable accrual method.** In this method, investors treat the market discount as accruing in equal daily installments during the period in which they hold the bond. They figure the daily installments by dividing the market discount by the number of days after the date they acquired the bond, up to and including its maturity date. Then they multiply the daily installments by the number of days they held the bond to figure their accrued market discount.

- **Constant yield method.** Instead of using the ratable accrual method, investors can choose to figure the accrued discount using a constant interest rate (the constant yield method). They make this choice by attaching to their timely filed return a statement identifying the bond and stating that they are making a constant interest rate election. The choice takes effect on the date the bond was acquired. If an investor chooses to use this method for any bond, they cannot change their choice for that bond.

Investors can choose to include market discount in income currently if they have not revoked a prior choice to include market discount in income currently within the last 5 calendar years.

Once this choice is made, it will apply to all market discount bonds that are acquired during the tax year and in later tax years. Investors cannot revoke their choice without the consent of the IRS.

**a. Effect on Basis**

Investors increase the basis of their bonds by the amount of market discount they include in their income.

**G. DISCOUNT ON SHORT-TERM OBLIGATIONS**

When an investor buys a short-term obligation (one with a fixed maturity date of 1 year or less from the date of issue), other than a tax-exempt obligation, he or she can generally choose to include any discount and interest payable on the obligation in income currently. If the investor does not make this choice, the following rules generally apply.

- The investor must treat any gain when he or she sells, exchanges, or redeems the obligation as ordinary income, up to the amount of the ratable share of the discount; and
• If the investor borrows money to buy or carry the obligation, his or her deduction for interest paid on the debt is limited.

Investors must include any discount or interest in current income as it accrues for any short-term obligation (other than a tax-exempt obligation) that is:

• Held by an accrual-basis taxpayer;
• Held primarily for sale to customers in the ordinary course of the investor's trade or business;
• Held by a bank, regulated investment company, or common trust fund;
• Held by certain pass-through entities;
• Identified as part of a hedging transaction; or
• A stripped bond or stripped coupon held by the person who stripped the bond or coupon (or by any other person whose basis in the obligation is determined by reference to the basis in the hands of that person).

H. ELECTION TO REPORT ALL INTEREST AS OID

Generally, investors can elect to treat all interest on a debt instrument acquired during the tax year as OID and include it in income currently. For purposes of this election, interest includes stated interest, acquisition discount, OID, de minimis OID, market discount, de minimis market discount, and unstated interest as adjusted by any amortizable bond premium or acquisition premium.

III. WHEN TO REPORT INTEREST INCOME

When an investor should report his or her interest income depends on whether he or she uses the cash method or an accrual method to report income. Most individual taxpayers use the cash method. If an investor uses this method, he or she generally reports his or her interest income in the year in which he or she actually or constructively receives it. However, there are special rules for reporting the discount on certain debt instruments.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>On September 1, 2014, Richard loaned another individual $2,000 at 12%, compounded annually. Richard is not in the business of lending money. The note stated that principal and interest would be due on August 31, 2016. In 2016, Richard received $2,508.80 ($2,000 principal and $508.80 interest). If Richard uses the cash method, he must include in income on his 2016 return the $508.80 interest he received in that year.</td>
</tr>
</tbody>
</table>

A person constructively receives income when it is credited to his or her account or made available to him or her. A person does not need to have physical possession of it. For example, an investor is considered
to have received interest, dividends, or other earnings on any deposit or account in a bank, savings and loan, or similar financial institution, or interest on life insurance policy dividends left to accumulate, when they are credited to his or her account and subject to his or her withdrawal. This is true even if they are not yet entered in the individual’s passbook.

An individual constructively receives income on the deposit or account even if he or she must:

- Make withdrawals in multiples of even amounts;
- Give a notice to withdraw before making the withdrawal;
- Withdraw all or part of the account to withdraw the earnings; or
- Pay a penalty on early withdrawals, unless the interest he or she is to receive on an early withdrawal or redemption is substantially less than the interest payable at maturity.

If an investor uses an accrual method, he or she reports interest income when he or she earns it, whether or not he or she has received it. Interest is earned over the term of the debt instrument.

**Example**

If, in the previous example, Richard uses an accrual method, he must include the interest in his income as he earns it. He would report the interest as follows: 2014, $80; 2015, $249.60; and 2016, $179.20.

Interest on bearer bonds with detachable coupons is generally taxable in the year the coupon becomes due and payable. It does not matter when you mail the coupon for payment.

**IV. DIVIDEndS AND OTHER DISTRIBUTIONS**

Dividends are distributions of money, stock, or other property paid to an individual by a corporation or by a mutual fund. Individuals also may receive dividends through a partnership, an estate, a trust, or an association that is taxed as a corporation. However, some amounts received that are called dividends are actually interest income. The most common kinds of distributions are:

- Ordinary dividends;
- Capital gain distributions;
- Nontaxable distributions; and
- Other distributions you may receive from a corporation or a mutual fund.

Most distributions are paid in cash (check). However, distributions can consist of more stock, stock rights, other property, or services.
If stock is sold, exchanged, or otherwise disposed of after a dividend is declared, but before it is paid, the owner of record (usually the payee shown on the dividend check) must include the dividend in income.

If a mutual fund (or other regulated investment company) or real estate investment trust (REIT) declares a dividend (including any exempt-interest dividend or capital gain distribution) in October, November, or December payable to shareholders of record on a date in one of those months but actually pays the dividend during January of the next calendar year, the shareholders are considered to have received the dividend on December 31. Investors report the dividend in the year it was declared.

A. ORDINARY DIVIDENDS

Ordinary (taxable) dividends are the most common type of distribution from a corporation or mutual fund. They are paid out of the earnings and profits and are ordinary income to individual investors. This means they are not capital gains. Investors can assume that any dividend they received on common or preferred stock is an ordinary dividend unless the paying corporation tells them otherwise. Ordinary dividends will be shown in box 1a of the Form 1099-DIV the investor receives.

1. Qualified Dividends

Qualified dividends are the ordinary dividends subject to the same 0%, 15%, or 20% maximum tax rate that applies to net capital gain. They should be shown in box 1b of the Form 1099-DIV received.

The maximum rate of tax on qualified dividends is:

- 0% on any amount that otherwise would be taxed at a 10% or 15% rate.
- 15% on any amount that otherwise would be taxed at rates greater than 15% but less than 39.6%.
- 20% on any amount that otherwise would be taxed at a 39.6% rate.

To qualify for the maximum rate, all of the following requirements must be met.

- The dividends must have been paid by a U.S. corporation or a qualified foreign corporation.
- The dividends are not of the type listed later under Dividends that are not qualified dividends.
- The holding period is met.

a. Holding Period

An investor must have held the stock for more than 60 days during the 121-day period that begins 60 days before the ex-dividend date. The ex-dividend date is the first date following the declaration of a dividend on which the buyer of a stock is not entitled to receive the next dividend payment. When counting the number of days the stock was held, include the day the investor disposed of the stock, but not the day he or she acquired it.
In the case of preferred stock, the investor must have held the stock more than 90 days during the 181-day period that begins 90 days before the ex-dividend date if the dividends are due to periods totaling more than 366 days. If the preferred dividends are due to periods totaling less than 367 days, the holding period in the preceding paragraph applies.

b. Dividends That Are Not Qualified Dividends

The following dividends are not qualified dividends. They are not qualified dividends even if they are shown in box 1b of Form 1099-DIV.

- Capital gain distributions.
- Dividends paid on deposits with mutual savings banks, cooperative banks, credit unions, U.S. building and loan associations, U.S. savings and loan associations, federal savings and loan associations, and similar financial institutions. (Report these amounts as interest income.)
- Dividends from a corporation that is a tax-exempt organization or farmer’s cooperative during the corporation’s tax year in which the dividends were paid or during the corporation’s previous tax year.
- Dividends paid by a corporation on employer securities held on the date of record by an employee stock ownership plan (ESOP) maintained by that corporation.
- Dividends on any share of stock to the extent you are obligated (whether under a short sale or otherwise) to make related payments for positions in substantially similar or related property.
- Payments in lieu of dividends, but only if you know or have reason to know the payments are not qualified dividends.
- Payments shown on Form 1099-DIV, box 1b, from a foreign corporation to the extent you know or have reason to know the payments are not qualified dividends.

2. Dividends Used to Buy More Stock

The corporation in which an investor owns stock may have a dividend reinvestment plan. This plan lets investors choose to use their dividends to buy (through an agent) more shares of stock in the corporation instead of receiving the dividends in cash. Most mutual funds also permit shareholders to automatically reinvest distributions in more shares in the fund, instead of receiving cash. If a person uses his or her dividends to buy more stock at a price equal to its fair market value, he or she still must report the dividends as income.

If someone is a member of a dividend reinvestment plan that lets people buy more stock at a price less than its fair market value, he or she must report as dividend income the fair market value of the additional stock on the dividend payment date.
Investors also must report as dividend income any service charge subtracted from their cash dividends before the dividends are used to buy the additional stock. But they may be able to deduct the service charge.

In some dividend reinvestment plans, investors can invest more cash to buy shares of stock at a price less than fair market value. If individuals choose to do this, they must report as dividend income the difference between the cash they invest and the fair market value of the stock they buy. When figuring this amount, investors should use the fair market value of the stock on the dividend payment date.

3. Money Market Funds

Report amounts received from money market funds as dividend income. Money market funds are a type of mutual fund and should not be confused with bank money market accounts that pay interest.

B. CAPITAL GAIN DISTRIBUTIONS

Capital gain distributions (also called capital gain dividends) are paid to investors or credited to their account by mutual funds (or other regulated investment companies) and real estate investment trusts (REITs). They will be shown in box 2a of the Form 1099-DIV received from the mutual fund or REIT. Capital gain distributions should be reported as long-term capital gains, regardless of how long the individual owned his or her shares in the mutual fund or REIT.

1. Undistributed Capital Gains of Mutual Funds and REITs

Some mutual funds and REITs keep their long-term capital gains and pay tax on them. Investors must treat their share of these gains as distributions, even though they did not actually receive them. However, they are not included on Form 1099-DIV. Instead, they are reported in box 1a of Form 2439.

2. Basis Adjustment

Investors should increase their basis in a mutual fund, or their interest in a REIT, by the difference between the gain they report and the credit they claim for the tax paid.

C. NONDIVIDEND DISTRIBUTIONS

A nondividend distribution is a distribution that is not paid out of the earnings and profits of a corporation or a mutual fund. An investor should receive a Form 1099-DIV or other statement showing the nondividend distribution. On Form 1099-DIV, a nondividend distribution will be shown in box 3. If the investor does not receive such a statement, the investor reports the distribution as an ordinary dividend.

A nondividend distribution reduces the basis of the stock. It is not taxed until the investor’s basis in the stock is fully recovered. This nontaxable portion is also called a return of capital; it is a return of the investor’s investment in the stock of the company. If the investor buys stock in a corporation in different lots at different times, and he or she cannot definitely identify the shares subject to the nondividend distribution, reduce the basis of the earliest purchases first.
When the basis of the investor’s stock has been reduced to zero, he or she reports any additional nondividend distribution received as a capital gain. Whether he or she reports it as a long-term or short-term capital gain depends on how long he or she has held the stock.

1. Liquidation Distributions

Liquidating distributions, sometimes called liquidating dividends, are distributions received during a partial or complete liquidation of a corporation. These distributions are, at least in part, one form of a return of capital. They may be paid in one or more installments.

Any liquidating distribution received is not taxable to an individual investor until the investor has recovered the basis of his or her stock. After the basis of the investor’s stock has been reduced to zero, he or she must report the liquidating distribution as a capital gain. Whether an investor reports the gain as a long-term or short-term capital gain depends on how long he or she has held the stock.

a. Stock Acquired at Different Times

If someone acquired stock in the same corporation in more than one transaction, he or she owns more than one block of stock in the corporation. If the person receives distributions from the corporation in complete liquidation, he or she must divide the distribution among the blocks of stock the person owns in the following proportion: the number of shares in that block over the total number of shares he or she owns. Divide distributions in partial liquidation among that part of the stock that is redeemed in the partial liquidation. After the basis of a block of stock is reduced to zero, the investor must report the part of any later distribution for that block as a capital gain.

b. Distributions Less Than Basis

If the total liquidating distributions received is less than the basis of an investor’s stock, he or she may have a capital loss. An investor can report a capital loss only after he or she has received the final distribution in liquidation that results in the redemption or cancellation of the stock. Whether the investor reports the loss as a long-term or short-term capital loss depends on how long he or she held the stock.

2. Distributions of Stock and Stock Rights

Distributions by a corporation of its own stock are commonly known as stock dividends. Stock rights (also known as “stock options”) are distributions by a corporation of rights to acquire the corporation’s stock. Generally, stock dividends and stock rights are not taxable to the individual investor, and the investor does not report them on his or her return.

a. Taxable Stock Dividends and Stock Rights

Distributions of stock dividends and stock rights are taxable if any of the following apply:

- The investor or any other shareholder has the choice to receive cash or other property instead of stock or stock rights;
• The distribution gives cash or other property to some shareholders and an increase in the percentage interest in the corporation's assets or earnings and profits to other shareholders;

• The distribution is in convertible preferred stock and has the same result as above;

• The distribution gives preferred stock to some common stock shareholders and common stock to other common stock shareholders; or

• The distribution is on preferred stock. (The distribution, however, is not taxable if it is an increase in the conversion ratio of convertible preferred stock made solely to take into account a stock dividend, stock split, or similar event that would otherwise result in reducing the conversion right.)

The term “stock” includes rights to acquire stock, and the term “shareholder” includes a holder of rights or convertible securities. If an individual receives taxable stock dividends or stock rights, he or she must include their fair market value at the time of the distribution in his or her income.

b. Constructive Distributions

Investors must treat certain transactions that increase their proportionate interest in the earnings and profits or assets of a corporation as if they were distributions of stock or stock rights. These constructive distributions are taxable if they have the same result as a distribution described above.

This treatment applies to a change in an investor’s stock’s conversion ratio or redemption price, a difference between the stock’s redemption price and issue price, a redemption that is not treated as a sale or exchange of the stock, and any other transaction having a similar effect on his or her interest in the corporation.

i. Preferred Stock Redeemable at a Premium

If an investor receives preferred stock having a redemption price higher than its issue price, the difference (the redemption premium) generally is taxable as a constructive distribution of additional stock on the preferred stock.

For stock issued before October 10, 1990, investors should include the redemption premium in their income ratably over the period during which the stock cannot be redeemed. For stock issued after October 9, 1990, they should include the redemption premium on the basis of its economic accrual over the period during which the stock cannot be redeemed, as if it were original issue discount on a debt instrument.

The redemption premium is not a constructive distribution, and therefore is not taxable, in the following situations:

• The stock was issued before October 10, 1990 (before December 20, 1995, if redeemable solely at the option of the issuer), and the redemption premium is “reasonable.” (For stock issued before October 10, 1990, only the part of the redemption premium that is not “reasonable” is a constructive distribution.) The redemption premium is reasonable if it is
not more than 10% of the issue price on stock not redeemable for 5 years from the issue date or is in the nature of a penalty for making a premature redemption;

• The stock was issued after October 9, 1990 (after December 19, 1995, if redeemable solely at the option of the issuer), and the redemption premium is “de minimis.” The redemption premium is de minimis if it is less than one-fourth of 1% (.0025) of the redemption price multiplied by the number of full years from the date of issue to the date redeemable;

• The stock was issued after October 9, 1990, and must be redeemed at a specified time or is redeemable at the investor’s option, but the redemption is unlikely because it is subject to a contingency outside his or her control (not including the possibility of default, insolvency, etc.);

• The stock was issued after December 19, 1995, and is redeemable solely at the option of the issuer, but the redemption premium is in the nature of a penalty for premature redemption or redemption is not more likely than not to occur. The redemption will be treated under a “safe harbor” as not more likely than not to occur if all of the following are true:
  ▫ The investor and the issuer are not related;
  ▫ There are no plans, arrangements, or agreements that effectively require or are intended to compel the issuer to redeem the stock; or
  ▫ The redemption would not reduce the stock’s yield.

**ii. Fractional Shares**

An individual investor may not own enough stock in a corporation to receive a full share of stock if the corporation declares a stock dividend. However, with the approval of the shareholders, the corporation may set up a plan in which fractional shares are not issued, but instead are sold, and the cash proceeds are given to the shareholders. Any cash received for fractional shares under such a plan is treated as an amount realized on the sale of the fractional shares. An investor reports this transaction on Form 8949. An investor enters his or her gain or loss in column (h) of Schedule D (Form 1040) in Part I or Part II, whichever is appropriate. The investor’s gain or loss is the difference between the cash he or she receives and the basis of the fractional shares sold.
Example

Linda owns one share of common stock that she bought on January 3, 2007, for $100. The corporation declared a common stock dividend of 5% on June 30, 2016. The fair market value of the stock at the time the stock dividend was declared was $200. Linda was paid $10 for the fractional-share stock dividend under a plan described in the above discussion. She figures her gain or loss as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fair market value of old stock</td>
<td>$200.00</td>
</tr>
<tr>
<td>Fair market value of stock dividend (cash received)</td>
<td>+ 10.00</td>
</tr>
<tr>
<td>Fair market value of old stock and stock dividend</td>
<td>$210.00</td>
</tr>
<tr>
<td>Basis (cost) of old stock after the stock dividend</td>
<td>$95.24</td>
</tr>
<tr>
<td>Basis (cost) of stock dividend</td>
<td>+ 4.76</td>
</tr>
<tr>
<td>Total</td>
<td>$100.00</td>
</tr>
<tr>
<td>Cash received</td>
<td>$10.00</td>
</tr>
<tr>
<td>Basis (cost) of stock dividend</td>
<td>- 4.76</td>
</tr>
<tr>
<td>Gain</td>
<td>$5.24</td>
</tr>
</tbody>
</table>

Because Linda had held the share of stock for more than 1 year at the time the stock dividend was declared, her gain on the stock dividend is a long-term capital gain.

iii. Scrip Dividends

A corporation that declares a stock dividend may issue investors a scrip certificate that entitles them to a fractional share. The certificate is generally nontaxable when it is received. If the investor chooses to have the corporation sell the certificate for the investor and give him or her the proceeds, the investor’s gain or loss is the difference between the proceeds and the part of his or her basis in the corporation’s stock that is allocated to the certificate.

However, if an investor receives a scrip certificate that he or she can choose to redeem for cash instead of stock, the certificate is taxable when it is received. Investors must include its fair market value in income on the date they receive it.

D. OTHER DISTRIBUTIONS

Investors may receive any of the following distributions during the year:

- **Exempt-interest dividends.** Exempt-interest dividends received from a mutual fund or other regulated investment company, including those received from a qualified fund of funds in any tax year beginning after December 22, 2010, are not included in the investor’s taxable income. Exempt-interest dividends should be shown in box 10 of Form 1099-DIV.
  - **Information reporting requirement.** Although exempt-interest dividends are not taxable, an investor must show them on his or her tax return if he or
she has to file a return. This is an information reporting requirement and does not change the exempt-interest dividends to taxable income.

- **Alternative minimum tax treatment.** Exempt-interest dividends paid from specified private activity bonds may be subject to the alternative minimum tax.

- **Dividends on insurance policies.** Insurance policy dividends that the insurer keeps and uses to pay investor premiums are not taxable. However, investors must report as taxable interest income the interest that is paid or credited on dividends left with the insurance company. If dividends on an insurance contract (other than a modified endowment contract) are distributed to them, they are a partial return of the premiums they paid. They should not be included in gross income until they are more than the total of all net premiums the investor paid for the contract. Taxable distributions on insurance policies are reported on Form 1040, line 21.

- **Dividends on veterans’ insurance.** Dividends received on veterans’ insurance policies are not taxable. In addition, interest on dividends left with the Department of Veterans Affairs is not taxable.

- **Patronage dividends.** Generally, patronage dividends received in money from a cooperative organization are included in an investor’s income.

### V. STRIPPED PREFERRED STOCK

If the dividend rights are stripped from certain preferred stock, the holder of the stripped preferred stock may have to include amounts in income equal to the amounts that would have been included if the stock were a bond with original issue discount (OID).

Stripped preferred stock is any stock that meets both of the following tests:

- There has been a separation in ownership between the stock and any dividend on the stock that has not become payable.

- The stock:
  - Is limited and preferred as to dividends;
  - Does not participate in corporate growth to any significant extent; and
  - Has a fixed redemption price.

If an investor buys stripped preferred stock after April 30, 1993, the investor must include certain amounts in his or her gross income while he or she holds the stock. These amounts are ordinary income. They are equal to the amounts the investor would have included in gross income if the stock were a bond that:

- Was issued on the purchase date of the stock; and

- Has OID equal to the redemption price for the stock, minus the price at which the investor bought the stock.
CHAPTER 1: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>

<td>B. insurance dividends</td>
</tr>
<tr>
<td></td>
<td>C. dividends</td>
</tr>
<tr>
<td></td>
<td>D. a refund</td>
</tr>
</tbody>
</table>
Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

1.  
   **A. Incorrect.** A cooperative bank is owned (proportionally) by its depositors or members. Because of this ownership interest, operational profit payments made to these members are referred to as “dividends.” However, for state and federal tax purposes, these payments are generally reported as taxable interest income.  
   **B. Incorrect.** Credit unions are depositor/member owned. The ownership percentages are based on the dollar amount of the depositors share accounts. Therefore, payments made to depositors are usually called “share dividends” – reflecting this shared ownership.  
   **C. Incorrect.** Similar to other depositor owned institutions, domestic building and loan associations pay “dividends” which must be reported for tax purposes as “interest” by the recipient.  
   **D. CORRECT.** A commercial bank pays depositors interest for the use and subsequent investment of the deposited funds. These payments are typically taxable interest income to the recipient and always called interest within a commercial bank.  
   *(See page 5 of the course material.)*

2.  
   **A. Incorrect.** Money market mutual fund shareholders do not receive interest payments from the fund as a return on their investment – it has another name.  
   **B. Incorrect.** Interest on an insurance dividend left on deposit with an insurance company is taxable to the individual in the year that it is credited to his or her account. This item should be reported as interest income and not as a dividend.  
   **C. CORRECT.** Generally, amounts received from money market mutual funds should be reported as dividends, not as interest by the recipient.  
   **D. Incorrect.** A refund is not the typical description for amounts routinely received by an investor from a money market mutual fund.  
   *(See page 6 of the course material.)*
I. LIMITS ON DEDUCTIONS

An individual’s deductions for investment expenses may be limited by a number of rules, including the following:

- The at-risk rules;
- The passive activity loss limits;
- The limit on investment interest; or
- The 2% limit on certain miscellaneous itemized deductions.

A. AT-RISK RULES

Special at-risk rules apply to most income-producing activities. These rules limit the amount of loss that an investor can deduct to the amount he or she risks losing in the activity. Generally, this is the amount of cash and the adjusted basis of property the investor contributes to the activity. It also includes money the investor borrows for use in the activity if they are personally liable for repayment or if they use property not used in the activity as security for the loan. This subject will be discussed in more detail in Chapter 3.

B. PASSIVE ACTIVITY LOSSES AND CREDITS

A passive activity generally is any activity involving the conduct of any trade or business in which the investor does not materially participate and any rental activity. However, if the individual is involved in renting real estate, the activity is not a passive activity if both of the following are true:

- More than one-half of the personal services the investor performs during the year in all trades or businesses are performed in real property trades or businesses in which he or she materially participates; and
- The investor performs more than 750 hours of services during the year in real property trades or businesses in which he or she materially participates.

The terms trade or business generally means any activity that involves the conduct of a trade or business, is conducted in anticipation of starting a trade or business, or involves certain research or experimental
expenditures. However, it does not include rental activities or certain activities treated as incidental to holding property for investment. Investors are considered to materially participate in an activity if they are involved on a regular, continuous, and substantial basis in the operations of the activity.

The amount of losses and tax credits an individual can claim from passive activities is limited. Generally, taxpayers are allowed to deduct passive activity losses only up to the amount of their passive activity income. Also, taxpayers can use credits from passive activities only against tax on the income from passive activities. There are exceptions for certain activities, such as rental real estate activities. The subject will be discussed in more detail in Chapter 3.

C. OTHER NONPASSIVE INCOME

Generally, taxpayers can use losses from passive activities only to offset income from passive activities. Investors generally cannot use passive activity losses to offset other income, such as wages or portfolio income. Portfolio income includes gross income from interest, dividends, annuities, or royalties that is not derived in the ordinary course of a trade or business. It also includes gains or losses (not derived in the ordinary course of a trade or business) from the sale or trade of property (other than an interest in a passive activity) producing portfolio income or held for investment. This includes capital gain distributions from mutual funds (and other regulated investment companies) and real estate investment trusts.

II. INTEREST EXPENSES

A. INVESTMENT INTEREST

If an individual borrows money to buy property to hold for investment, the interest the investor pays is investment interest. He or she can deduct investment interest subject to the limit discussed later. However, the investor cannot deduct interest incurred to produce tax-exempt income. Investment interest does not include any qualified home mortgage interest or any interest taken into account in computing income or loss from a passive activity.

1. Investment Property

Property held for investment includes property that produces interest, dividends, annuities, or royalties not derived in the ordinary course of a trade or business. It also includes property that produces gain or loss (not derived in the ordinary course of a trade or business) from the sale or trade of property producing these types of income or held for investment (other than an interest in a passive activity). Investment property also includes an interest in a trade or business activity in which the investor did not materially participate (other than a passive activity).

2. Allocation of Interest Expense

If an individual borrows money for business or personal purposes as well as for investment, he or she must allocate the debt among those purposes. Only the interest expense on the part of the debt used for investment purposes is treated as investment interest. The allocation is not affected by the use of property that secures the debt.
Example 1

Walt borrows $10,000 and uses $8,000 to buy stock. He uses the other $2,000 to buy items for his home. Since 80% of the debt is used for, and allocated to, investment purposes, 80% of the interest on that debt is investment interest. The other 20% is nondeductible personal interest.

a. Debt Proceeds

If an investor receives debt proceeds in cash, the proceeds are generally not treated as investment property. If an investor deposits debt proceeds in an account, that deposit is treated as investment property, regardless of whether the account bears interest. But, if the individual withdraws the funds and uses them for another purpose, he or she must reallocate the debt to determine the amount considered to be for investment purposes.

Example 2

Assume in Example 1 that Walt borrowed the money on March 1 and immediately bought the stock for $8,000. Walt did not buy the household items until June 1. He had deposited the $2,000 in the bank. Walt had no other transactions on the bank account and made no principal payments on the debt. Walt paid interest from another account. The $8,000 is treated as being used for an investment purpose. The $2,000 is treated as being used for an investment purpose for the 3-month period. Walt’s total interest expense for 3 months on this debt is investment interest. In June, when he spends the $2,000 for household items, he must begin to allocate 80% of the debt and the interest expense to investment purposes and 20% to personal purposes.

If an individual receives loan proceeds in cash or if the loan proceeds are deposited in an account, he or she can treat any payment (up to the amount of the proceeds) made from any account he or she owns, or from cash, as made from those proceeds. This applies to any payment made within 30 days before or after the proceeds are received in cash or deposited in his or her account.

If the individual received the loan proceeds in cash, he or she can treat the payment as made on the date he or she received the cash instead of the date the payment was actually made.

b. Pass-Through Entities

If an individual uses borrowed funds to buy an interest in a partnership or S corporation, then the interest on those funds must be allocated based on the assets of the entity. If the individual contributes to the capital of the entity, he or she can make the allocation using any reasonable method.
3. When to Deduct Investment Interest

If an investor uses the cash method of accounting, the investor must pay the interest before he or she can deduct it. If an individual uses an accrual method of accounting, he or she can deduct interest over the period it accrues, regardless of when it is paid.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jack borrowed $1,000 on August 26, 2016, payable in 90 days at 12% interest. On November 26, 2016, he paid this with a new note for $1,030, due on February 26, 2017. If Jack uses the cash method of accounting, he cannot deduct any part of the $30 interest on his return for 2016 because he did not actually pay it. If Jack uses an accrual method, he may be able to deduct a portion of the interest on the loans through December 31, 2016, on his return for 2016.</td>
</tr>
</tbody>
</table>

a. Interest Paid in Advance

Generally, if an individual pays interest in advance for a period that goes beyond the end of the tax year, he or she must spread the interest over the tax years to which it belongs under the OID rules. The individual can deduct in each year only the interest for that year.

b. Interest on Margin Accounts

If an individual is a cash method taxpayer, he or she can deduct interest on margin accounts to buy taxable securities as investment interest in the year he or she paid it. The investor is considered to have paid interest on these accounts only when he or she actually pays the broker or when payment becomes available to the broker through his or her account. Payment may become available to the broker through his or her account when the broker collects dividends or interest for the investor’s account, or sells securities held for the investor or received from the investor. Investors cannot deduct any interest on money borrowed for personal reasons.

c. Limit on Interest Deduction for Market Discount Bonds

The amount an individual can deduct for interest expense paid or accrued during the year to buy or carry a market discount bond may be limited. This limit does not apply if the individual accrues the market discount and includes it in his or her income currently.

B. LIMIT ON DEDUCTION

Generally, deductions for investment interest expense are limited to the amount of the investor’s net investment income. Investors can carry over the amount of investment interest that he or she could not deduct because of this limit to the next tax year. The interest carried over is treated as investment interest paid or accrued in that next year.

Investors can carry over disallowed investment interest to the next tax year even if it is more than their taxable income in the year the interest was paid or accrued.
1. **Net Investment Income**

Investment income generally includes gross income from property held for investment (such as interest, dividends, annuities, and royalties). Investment income does not include Alaska Permanent Fund dividends. It also does not include qualified dividends or net capital gain unless the investor chooses to include them.

Investment income generally does not include net capital gain from disposing of investment property (including capital gain distributions from mutual funds). However, investors can choose to include all or part of their net capital gain in investment income.

If an investor chooses to include any amount of his or her net capital gain in investment income, the investor must reduce his or her net capital gain that is eligible for the lower capital gains tax rates by the same amount. Before making this choice, investors must consider the overall effect on their tax liability.

2. **Investment Income of Child**

Investment income includes the part of a child’s interest and dividend income that an investor chooses to report on his or her return.

3. **Investment Expenses**

Investment expenses are an investor’s allowed deductions (other than interest expense) directly connected with the production of investment income. Investment expenses that are included as a miscellaneous itemized deduction on Schedule A (Form 1040) are allowable deductions after applying the 2% limit that applies to miscellaneous itemized deductions. The amount used is the smaller of the investment expenses included on Schedule A (Form 1040), line 23 or the amount on Schedule A (Form 1040), line 27.

4. **Losses from Passive Activities**

Income or expenses that an investor used in computing income or loss from a passive activity are not included in determining their investment income or investment expenses (including investment interest expense).

---

**Example**

Ted is a partner in a partnership that operates a business. However, he does not materially participate in the partnership’s business. Ted’s interest in the partnership is considered a passive activity.

Ted’s investment income from interest and dividends (other than qualified dividends) is $10,000. His investment expenses (other than interest) are $3,200 after taking into account the 2% limit on miscellaneous itemized deductions. His investment interest expense is $8,000. Ted also has income from the partnership of $2,000.
Example (continued)

Ted figures his net investment income and the limit on his investment interest expense deduction in the following way:

<table>
<thead>
<tr>
<th>Total investment income</th>
<th>$10,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minus: Investment expense (other than Interest)</td>
<td>$3,200</td>
</tr>
<tr>
<td>Net investment income</td>
<td>$6,800</td>
</tr>
<tr>
<td>Deductible investment interest expense for the year</td>
<td>$6,800</td>
</tr>
</tbody>
</table>

The $2,000 of income from the passive activity is not used in determining Ted’s net investment income. His investment interest deduction for the year is limited to $6,800, the amount of his net investment income.

III. EXPENSES OF PRODUCING INCOME

Individuals must deduct investment expenses (other than interest expenses) as miscellaneous itemized deductions on Schedule A (Form 1040). To be deductible, these expenses must be ordinary and necessary expenses paid or incurred:

- To produce or collect income, or
- To manage property held for producing income.

The expenses must be directly related to the income or income-producing property, and the income must be taxable to the investor.

The deduction for most income-producing expenses is subject to a 2% limit that also applies to certain other miscellaneous itemized deductions. The amount deductible is limited to the total of these miscellaneous deductions that is more than 2% of an individual’s adjusted gross income.

A. TYPES OF EXPENSES

1. Attorney or Accounting Fees

Individuals can deduct attorney or accounting fees that are necessary to produce or collect taxable income. However, in some cases, attorney or accounting fees are part of the basis of property.

2. Automatic Investment Service and Dividend Reinvestment Plans

A bank may offer its checking account customers an automatic investment service so that, for a charge, each customer can choose to invest a part of the checking account each month in common stock. Or, a bank that is a dividend disbursing agent for a number of publicly-owned corporations may set up an automatic dividend reinvestment service. Through that service, cash dividends are reinvested in more shares of stock, after the bank deducts a service charge.
A corporation in which an individual owns stock also may have a dividend reinvestment plan. This plan lets individuals choose to use their dividends to buy more shares of stock in the corporation instead of receiving the dividends in cash.

Individuals can deduct the monthly service charge they pay to a bank to participate in an automatic investment service. If they participate in a dividend reinvestment plan, they can deduct any service charge subtracted from their cash dividends before the dividends are used to buy more shares of stock. Individuals can deduct the charges in the year in which they are paid.

3. Clerical Help and Office Rent

Individuals can deduct office expenses, such as rent and clerical help, that are paid in connection with their investments and collecting the taxable income on them.

4. Cost of Replacing Missing Securities

To replace taxable securities that are misplaced, lost, stolen, or destroyed, individuals may have to post an indemnity bond. The individual can deduct the premium he or she pays to buy the indemnity bond and the related incidental expenses. The individual may, however, get a refund of part of the bond premium if the missing securities are recovered within a specified time. Under certain types of insurance policies, the person can recover some of the expenses.

If an individual receives the refund in the tax year he or she pays the amounts, the individual can deduct only the difference between the expenses paid and the amount refunded. If the refund is made in a later tax year, the individual must include the refund in income in the year it is received, but only to the extent that the expenses decreased the individual’s tax in the year they were deducted.

5. Fees to Collect Income

Individuals can deduct fees paid to a broker, bank, trustee, or similar agent to collect investment income, such as their taxable bond or mortgage interest, or dividends on shares of stock. On the other hand, individuals cannot deduct a fee paid to a broker to acquire investment property, such as stocks or bonds. They must add the fee to the cost of the property.

Likewise, individuals cannot deduct any broker’s fees, commissions, or option premiums paid (or that were netted out) in connection with the sale of investment property. They can be used only to figure gain or loss from the sale.

6. Investment Counsel and Advice

Individuals can deduct fees paid for counsel and advice about investments that produce taxable income. This includes amounts paid for investment advisory services.

7. Safe Deposit Box Rent

Individuals can deduct rent paid for a safe deposit box if it is used to store taxable income-producing stocks, bonds, or other investment-related papers and documents. If the box is also used to store tax-exempt securities or personal items, only part of the rent can be deducted.
8. State and Local Transfer Taxes

Individuals cannot deduct the state and local transfer taxes paid when securities are bought and sold. If an individual pays these transfer taxes when securities are purchased, they must be treated as part of the cost of the property. If the transfer taxes are paid when the securities are sold, they must be treated as a reduction in the amount realized.

9. Trustee’s Commissions for Revocable Trust

If an individual sets up a revocable trust and has its income distributed, he or she can deduct the commission paid to the trustee for managing the trust to the extent it is to produce or collect taxable income or to manage property. However, the individual cannot deduct any part of the commission that is for producing or collecting tax-exempt income or for managing property that produces tax-exempt income.

If the individual is a cash-basis taxpayer and pays the commissions for several years in advance, he must deduct a part of the commission each year. He cannot deduct the entire amount in the year it is paid.

10. Investment Expenses from Pass-Through Entities

If an individual holds an interest in a partnership, S corporation, real estate mortgage investment conduit (REMIC), or a nonpublicly offered mutual fund, the individual can deduct his or her share of that entity's investment expenses.

An individual’s share of the investment expenses of a REMIC or a nonpublicly offered mutual fund are considered to be indirect deductions through that pass-through entity. Individuals must include in their gross income an amount equal to the amount of the expenses allocated to that individual, whether or not he or she is able to claim a deduction for those expenses. If the individual is a shareholder in a nonpublicly offered mutual fund, he or she must include on his or her return the full amount of ordinary dividends or other distributions of stock. If an individual is a residual interest holder in a REMIC, he must report the amount as ordinary income.

B. NONDEDUCTIBLE EXPENSES

Some expenses that individuals incur as an investor are not deductible, including the following.

1. Stockholders’ Meetings

Individuals cannot deduct transportation and other expenses that are paid to attend stockholders’ meetings of companies in which the individual has no interest other than owning stock. This is true even if the person’s purpose in attending is to get information that would be useful in making further investments.

2. Investment-Related Seminars

Individuals cannot deduct expenses for attending a convention, seminar, or similar meeting for investment purposes.
3. **Single-Premium Life Insurance, Endowment, and Annuity Contracts**

Individuals cannot deduct interest on money they borrow to buy or carry a single-premium life insurance, endowment, or annuity contract.

4. **Borrowing on Insurance**

Generally, individuals cannot deduct interest on money borrowed to buy or carry a life insurance, endowment, or annuity contract if the individual plans to systematically borrow part or all of the increases in the cash value of the contract. This rule applies to the interest on the total amount borrowed to buy or carry the contract, not just the interest on the borrowed increases in the cash value.

5. **Tax-Exempt Income**

Individuals cannot deduct expenses incurred to produce tax-exempt income. Nor can individuals deduct interest on money borrowed to buy tax-exempt securities or shares in a mutual fund or other regulated investment company (mutual fund) that distributes only exempt-interest dividends.

The rule disallowing a deduction for interest expenses on tax-exempt securities applies to amounts paid in connection with personal property used in a short sale or amounts paid by others for the use of any collateral in connection with the short sale. However, it does not apply to the expenses incurred when the person deposits cash as collateral for the property used in the short sale and the cash does not earn a material return during the period of the sale.

Individuals may have expenses that are for both tax-exempt and taxable income. If they cannot specifically identify what part of the expenses is for each type of income, they can divide the expenses, using reasonable proportions based on facts and circumstances. The individual must attach a statement to his or her return showing how the expenses were divided and stating that each deduction claimed is not based on tax-exempt income.

One accepted method for dividing expenses is to do it in the same proportion that each type of income is to the total income. If the expenses relate in part to capital gains and losses, they can include the gains, but not the losses, in figuring this proportion. To find the part of the expenses that is for the tax-exempt income, an individual should divide tax-exempt income by the total income and multiply his or her expenses by the result.

### Example

Martin received $6,000 interest; $4,800 was tax-exempt and $1,200 was taxable. In earning this income, Martin had $500 of expenses. He cannot specifically identify the amount of each expense item that is for each income item, so he must divide his expenses. 80% ($4,800 tax-exempt interest divided by $6,000 total interest) of his expenses is for the tax-exempt income. Martin cannot deduct $400 (80% of $500) of the expenses. Martin can deduct $100 (the rest of the expenses) because they are for the taxable interest.
If an individual itemizes his or her deductions, he or she can deduct as taxes, state income taxes on interest income that is exempt from federal income tax. But he or she cannot deduct, as either taxes or investment expenses, state income taxes on other exempt income.

6. Interest Expense and Carrying Charges on Straddles

Individuals cannot deduct interest and carrying charges that are allocable to personal property that is part of a straddle. The nondeductible interest and carrying charges are added to the basis of the straddle property. However, this treatment does not apply if:

- All the offsetting positions making up the straddle either consist of one or more qualified covered call options and the optioned stock or consist of section 1256 contracts (and the straddle is not part of a larger straddle), or
- The straddle is a hedging transaction.

IV. WHEN TO REPORT INVESTMENT EXPENSES

If an investor uses the cash method to report income and expenses, he or she can generally deduct his or her expenses, except for certain prepaid interest, in the year in which they are paid.

If the individual uses an accrual method, he or she generally deducts his or her expenses when he or she incurs a liability for them, rather than when they are paid.
# CHAPTER 2: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

<table>

</table>
THIS PAGE INTENTIONALLY LEFT BLANK.
CHAPTER 2: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 1. | A. **CORRECT**. The at risk rules generally limit the amount that an investor can deduct from his or her taxes to the amount he or she actually has “at risk.”
  B. Incorrect. It may be true that people who are afraid to invest rarely make money, but it is not the meaning of this rule.
  C. Incorrect. Entitlement to more tax deductions is not the meaning or intent of the rule.
  D. Incorrect. One of the responses is the correct description of the rule.
  *(See page 37 of the course material.)* |
|   |   |
| 2. | A. Incorrect. There is a limit on the amount of these expenses that can be deducted.
  B. **CORRECT**. The amount deductible is limited to more than 2% of an individual’s adjusted gross income.
  C. Incorrect. The limit is actually less than 8%.
  D. Incorrect. The limit is the same as that of certain other miscellaneous itemized deductions.
  *(See page 42 of the course material.)* |
There are many factors that must be taken into account when an individual makes a particular investment decision. For individuals considering certain types of investments as part of their financial plan, it is important to recognize certain tax implications that could reduce the value of particular types of investments. For example, if William decides to invest in a shopping center in hopes of using the money to pay for his children’s education in later years, what are the implications if the project loses money? Will he be able to deduct all of those losses against other income? The passive activity limitations and at-risk rules can have a significant affect on the tax implications of certain types of investments, and therefore, must be understood before crafting a financial plan.

I. PASSIVE ACTIVITY LIMITATIONS

Passive income and at-risk rules affect the losses that a taxpayer can use to offset income from other sources, such as capital gains on the sale of stocks or bonds. In general, taxpayers can deduct passive activity losses only from passive activity income. Taxpayers carry any excess loss forward to the following year or years until used, or until deducted in the year they dispose of their entire interest in the activity in a fully taxable transaction. Before applying this limit on passive activity losses, taxpayers must first determine the amount of their loss disallowed under the at-risk rules, explained later in this chapter.

A. PERSONS SUBJECT TO RULES

The passive activity rules apply to:

- Individuals;
- Estates;
- Trusts (other than grantor trusts);
- Personal service corporations; and
- Closely held corporations.

Even though the rules do not apply to grantor trusts, partnerships, or S corporations directly, they do apply to the owners of these entities.
B. PASSIVE ACTIVITIES

1. Types of Activities

There are two kinds of passive activities:

- Trade or business activities in which individuals do not materially participate during the year; and

- Rental activities, even if the individual does materially participate in them, unless he or she is a real estate professional.

2. Former Passive Activities

A former passive activity is an activity that was a passive activity in any earlier tax year, but is not a passive activity in the current tax year. A taxpayer can deduct a prior years’ disallowed loss from the activity up to the amount of their current year net income from the activity. Any remaining prior year disallowed loss should be treated like any other passive loss.

In addition, any prior year disallowed passive activity credits from a former passive activity offsets the allocable part of a taxpayer’s current year tax liability. The allocable part of a taxpayer’s current year tax liability is that part of this year’s tax liability that is allocable to the current year net income from the former passive activity. You figure this after you reduce your net income from the activity by any prior year unallowed loss from that activity (but not below zero).

3. Trade or Business Activities

A trade or business activity is an activity that:

- Involves the conduct of a trade or business (that is, deductions would be allowable under § 162 of the Internal Revenue Code if other limitations, such as the passive activity rules, did not apply);

- Is conducted in anticipation of starting a trade or business; or

- Involves research or experimental expenditures that are deductible under Internal Revenue Code § 174 (or that would be deductible if the taxpayer chose to deduct rather than capitalize them).

A trade or business activity does not include a rental activity or the rental of property that is incidental to an activity of holding the property for investment.

4. Rental Activities

A rental activity is a passive activity even if an individual materially participated in that activity, unless he or she materially participated as a real estate professional. An activity is a rental activity if tangible property (real or personal) is used by customers or held for use by customers, and the gross income (or expected gross income) from the activity represents amounts paid (or to be paid) mainly for the use
of the property. It does not matter whether the use is under a lease, a service contract, or some other arrangement.

An activity is not a rental activity if any of the following apply:

- The average period of customer use of the property is seven days or less. The average period of customer use is calculated by dividing the total number of days in all rental periods by the number of rentals during the tax year. If the activity involves renting more than one class of property, multiply the average period of customer use of each class by a fraction. The numerator of the fraction is the gross rental income from that class of property and the denominator is the activity’s total gross rental income. The activity’s average period of customer use will equal the sum of the amounts for each class;

- The average period of customer use of the property, as figured above, is 30 days or less and the individual provides significant personal services with the rentals. Significant personal services include only services performed by individuals. To determine if personal services are significant, all relevant facts and circumstances are taken into consideration, including the frequency of the services, the type and amount of labor required to perform the services, and the value of the services relative to the amount charged for use of the property. Significant personal services do not include the following:
  - Services needed to permit the lawful use of the property;
  - Services to repair or improve property that would extend its useful life for a period substantially longer than the average rental; and
  - Services that are similar to those commonly provided with long-term rentals of real estate, such as cleaning and maintenance of common areas or routine repairs.

- An individual provides extraordinary personal services in making the rental property available for customer use. Services are extraordinary personal services if they are performed by individuals and the customers’ use of the property is incidental to their receipt of the services;

- The rental is incidental to a non-rental activity. The rental of property is incidental to an activity of holding property for investment if the main purpose of holding the property is to realize a gain from its appreciation and the gross rental income from the property is less than 2% of the smaller of the property's unadjusted basis or fair market value. The unadjusted basis of property is its cost not reduced by depreciation or any other basis adjustment. The rental of property is incidental to a trade or business activity if all of the following apply:
  - An individual owns an interest in the trade or business activity during the year;
  - The rental property was used mainly in that trade or business activity during the current year, or during at least 2 of the 5 preceding tax years;
The individual’s gross rental income from the property is less than 2% of the smaller of its unadjusted basis or fair market value. Lodging provided to an employee or the employee’s spouse or dependents is incidental to the activity or activities in which the employee performs services if the lodging is furnished for the employer’s convenience.

- The individual customarily makes the rental property available during defined business hours for nonexclusive use by various customers; or

- The individual provides the property for use in a non-rental activity in his or her capacity as an owner of an interest in the partnership, S corporation, or joint venture conducting that activity.

If an individual meets any of the exceptions listed above, see the instructions for Form 8582 for information about how to report any income or loss from the activity.

If a taxpayer or his or her spouse actively participated in a passive rental real estate activity, the taxpayer can deduct up to $25,000 of loss from the activity from his or her non-passive income. This special allowance is an exception to the general rule disallowing losses in excess of income from passive activities. Similarly, an individual can offset credits from the activity against the tax on up to $25,000 of non-passive income after taking into account any losses allowed under this exception.

If a taxpayer is married, filing a separate return, and lived apart from his or her spouse for the entire tax year, the taxpayer’s special allowance cannot be more than $12,500. If an individual lived with his or her spouse at any time during the year and is filing a separate return, he or she cannot use the special allowance to reduce his or her non-passive income or tax on non-passive income. The maximum special allowance is reduced if an individual’s modified adjusted gross income exceeds certain amounts.

**Example**

Kate, a single taxpayer, has $70,000 in wages, $15,000 income from a limited partnership, a $26,000 loss from rental real estate activities in which she actively participated, and is not subject to the modified adjusted gross income phaseout rule. She can use $15,000 of her $26,000 loss to offset her $15,000 passive income from the partnership. She actively participated in her rental real estate activities, so she can use the remaining $11,000 rental real estate loss to offset $11,000 of her non-passive income (wages).

5. **Active Participation**

Active participation is a less stringent standard than material participation. For example, an individual may be treated as actively participating if he or she makes management decisions in a significant and bona fide sense. Management decisions that count as active participation include approving new tenants, deciding on rental terms, approving expenditures, and similar decisions.
Only individuals can actively participate in rental real estate activities. However, a decedent’s estate is treated as actively participating for its tax years ending less than 2 years after the decedent’s death, if the decedent would have satisfied the active participation requirement for the activity for the tax year the decedent died. A decedent’s qualified revocable trust can also be treated as actively participating if both the trustee and the executor (if any) of the estate choose to treat the trust as part of the estate. The choice applies to tax years ending after the decedent’s death and before:

- Two years after the decedent’s death if no estate tax return is required; or
- Six months after the estate tax liability is finally determined if an estate tax return is required.

The choice is irrevocable and cannot be made later than the due date for the estate’s first income tax return (including any extensions). Limited partners are not treated as actively participating in a partnership’s rental real estate activities.

An individual is not treated as actively participating in a rental real estate activity unless his or her interest in the activity (including a spouse’s interest) was at least 10% (by value) of all interests in the activity throughout the year. Active participation is not required to take the low-income housing credit, the rehabilitation investment credit, or commercial revitalization deduction from rental real estate activities.

### Example

Mike, a single taxpayer, had the following income and loss during the tax year:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salary</td>
<td>$42,300</td>
</tr>
<tr>
<td>Dividends</td>
<td>300</td>
</tr>
<tr>
<td>Interest</td>
<td>1,400</td>
</tr>
<tr>
<td>Rental loss</td>
<td>(4,000)</td>
</tr>
</tbody>
</table>

The rental loss came from a house Mike owned. He advertised and rented the house to the current tenant himself. He also collected the rents and either did the repairs or hired someone to do them. Even though the rental loss is a loss from a passive activity, Mike can use the entire $4,000 loss to offset his other income because he actively participated.

6. **Phaseout Rule**

The maximum special allowance of $25,000 ($12,500 for married individuals filing separate returns and living apart at all times during the year) is reduced by 50% of the amount of an individual’s modified adjusted gross income that is more than $100,000 ($50,000 if a taxpayer is married filing separately). If a taxpayer’s modified adjusted gross income is $150,000 or more ($75,000 or more if they are married filing separately), he or she generally cannot use the special allowance.

Modified adjusted gross income for this purpose is an individual’s adjusted gross income figured without the following:
• Taxable social security and tier 1 railroad retirement benefits;

• Deductible contributions to individual retirement accounts (IRAs) and § 501(c)(18) pension plans;

• The exclusion from income of interest from qualified U.S. savings bonds used to pay qualified higher education expenses;

• The exclusion from income of amounts received from an employer’s adoption assistance program;

• Passive activity income or loss included on Form 8582;

• Any rental real estate loss allowed because you materially participated in the rental activity as a real estate professional;

• Any overall loss from a publicly traded partnership;

• The deduction allowed for the deductible part of self-employment tax;

• The deduction for domestic production activities;

• The deduction allowed for interest on student loans; or

• The deduction for qualified tuition and related expenses.

### Example

During 2016, John was unmarried and was not a real estate professional. For 2016, he had $120,000 in salary and a $31,000 loss from his rental real estate activities in which he actively participated. His modified adjusted gross income is $120,000. When he files his 2016 return, he may deduct only $15,000 of his passive activity loss. He must carry over the remaining $16,000 passive activity loss to 2017. He figures his deduction and carryover as follows:

<table>
<thead>
<tr>
<th>Calculation</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjusted gross income, modified as required</td>
<td>$120,000</td>
</tr>
<tr>
<td>Minus amount not subject to phaseout</td>
<td>$100,000</td>
</tr>
<tr>
<td>Amount subject to phaseout rule</td>
<td>$20,000</td>
</tr>
<tr>
<td>Multiply by 50%</td>
<td>× 50%</td>
</tr>
<tr>
<td>Required reduction to special allowance</td>
<td>$10,000</td>
</tr>
<tr>
<td>Maximum special allowance</td>
<td>$25,000</td>
</tr>
<tr>
<td>Minus required reduction (see above)</td>
<td>$15,000</td>
</tr>
<tr>
<td>Adjusted special allowance</td>
<td>$15,000</td>
</tr>
<tr>
<td>Passive loss from rental real estate</td>
<td>$31,000</td>
</tr>
<tr>
<td>Deduction allowable/Adjusted special allowance (see above)</td>
<td>$15,000</td>
</tr>
<tr>
<td>Amount that must be carried forward</td>
<td>$16,000</td>
</tr>
</tbody>
</table>
A higher phaseout range applies to rehabilitation investment credits from rental real estate activities. For those credits, the phaseout of the $25,000 special allowance starts when a taxpayer’s modified adjusted gross income exceeds $200,000 ($100,000 if the taxpayer is a married individual filing a separate return and living apart at all times during the year).

There is no phaseout of the $25,000 special allowance for low-income housing credits or for the commercial revitalization deduction (CRD).

If a taxpayer has more than one of the exceptions to the phaseout rules in the same tax year, he or she must apply the $25,000 phaseout against his or her passive activity losses and credits in the following order:

- The portion of passive activity losses not attributable to the CRD.
- The portion of passive activity losses attributable to the CRD.
- The portion of passive activity credits attributable to credits other than the rehabilitation and low-income housing credits.
- The portion of passive activity credits attributable to the rehabilitation credits.
- The portion of passive activity credits attributable to the low-income housing credit.

C. ACTIVITIES THAT ARE NOT PASSIVE

The following are not passive activities:

- Trade or business activities in which an individual materially participates for the tax year;
- A working interest in an oil or gas well held directly or through an entity that does not limit the investor’s liability (such as a general partner interest in a partnership). It does not matter whether the individual materially participated in the activity for the tax year. However, if the individual’s liability was limited for part of the year (for example, the individual converted his or her general partner interest to a limited partner interest during the year) and he or she had a net loss from the well for the year, some of the individual’s income and deductions from the working interest may be treated as passive activity gross income and passive activity deductions;
- The rental of a dwelling unit that an individual also used for personal purposes during the year for more than the greater of 14 days or 10% of the number of days during the year that the home was rented at a fair rental;
- An activity of trading personal property for the account of those who own interests in the activity; or
- Rental real estate activities in which an individual materially participated as a real estate professional.
1. Material Participation

A trade or business activity is not a passive activity if an individual materially participated in the activity. An individual is considered to have materially participated in a trade or business activity for a tax year if he or she satisfies any of the following tests:

1) The individual participated in the activity for more than 500 hours;

2) His or her participation was substantially all the participation in the activity of all individuals for the tax year, including the participation of individuals who did not own any interest in the activity;

3) The individual participated in the activity for more than 100 hours during the tax year, and participated at least as much as any other individual (including individuals who did not own any interest in the activity) for the year;

4) The activity is a significant participation activity, and the individual participated in all significant participation activities for more than 500 hours. A significant participation activity is any trade or business activity in which an individual participated for more than 100 hours during the year and in which he or she did not materially participate under any of the material participation tests, other than this test;

5) The individual materially participated in the activity for any five (whether or not consecutive) of the ten immediately preceding tax years;

6) The activity is a personal service activity in which the individual materially participated for any three (whether or not consecutive) preceding tax years. An activity is a personal service activity if it involves the performance of personal services in the fields of health (including veterinary services), law, engineering, architecture, accounting, actuarial science, performing arts, consulting, or any other trade or business in which capital is not a material income-producing factor; or

7) Based on all the facts and circumstances, the individual participated in the activity on a regular, continuous, and substantial basis during the year.

An individual did not materially participate in the activity under the last test if he or she participated in the activity for 100 hours or less during the year. An individual’s participation in managing the activity does not count in determining whether he or she materially participated under this test if:

- Any other person received compensation for managing the activity; or

- Any other person spent more hours than the individual during the tax year managing the activity (regardless of whether the individual was compensated for the management services).
In general, any work an individual does in connection with an activity in which he or she owns an interest is treated as participation in the activity. A taxpayer may not treat the work he or she does in connection with an activity as participation in the activity if both of the following are true:

- The work is not work that is customarily done by the owner of that type of activity; and
- One of the individual’s main reasons for doing the work is to avoid the disallowance of any loss or credit from the activity under the passive activity rules.

An investor is generally not actively participating in a business unless they are directly involved in the day-to-day management operations of the enterprise. Work conducted by an investor generally includes:

- Studying and reviewing financial statements or reports on operations of the activity;
- Preparing or compiling summaries or analyses of the finances or operations of the activity for his or her own use; and
- Monitoring the finances or operations of the activity in a nonmanagerial capacity.

An individual’s participation in an activity includes his or her spouse’s participation. This applies even if the spouse did not own any interest in the activity and the couple did not file a joint return for the tax year in question.

Taxpayers can generally use any reasonable method to prove their participation in an activity for the year. It is not necessary to keep contemporaneous daily time reports, logs, or similar documents if an individual can establish his or her participation in some other way. For example, individuals can show the services they performed and the approximate number of hours spent by using an appointment book, calendar, or narrative summary.

If an individual owned an activity as a limited partner, he or she generally is not treated as materially participating in the activity. However, the individual can be considered to have materially participated if he or she met test (1), (5), or (6) discussed above, for the tax year. An individual is not treated as a limited partner, however, if he or she was a general partner in the partnership at all times during the partnership’s tax year ending with or within his or her tax year (or, if shorter, during that part of the partnership’s tax year in which he or she directly or indirectly owned his or her limited partner interest).

A closely held corporation or a personal service corporation is treated as materially participating in an activity only if one or more shareholders holding more than 50% by value of the outstanding stock of the corporation materially participated in the activity.

II. AT-RISK RULES

The at-risk rules limit the losses from most activities to the amount an individual has at risk in the activity. Any loss that is disallowed because of the at-risk limits is treated as a deduction from the same activity in the next tax year. If a taxpayer’s losses from an at-risk activity are allowed, they are subject to recapture in later years if the individual’s amount at risk is reduced below zero. The at-risk rules must be applied before the passive activity rules discussed in the previous section.
A. ACTIVITIES COVERED BY THE AT-RISK RULES

Persons involved in one of the following activities as a trade or business or for the production of income are subject to the at-risk rules:

- Holding, producing, or distributing motion picture films or video tapes;
- Farming;
- Leasing § 1245 property, including personal property and certain other tangible property that is depreciable or amortizable;
- Exploring for, or exploiting, oil and gas;
- Exploring for, or exploiting, geothermal deposits (for wells started after September 1978); or
- Any other activity that is carried on as a trade or business or for the production of income.

1. Section 1245 Property

Section 1245 property includes any property that is or has been subject to depreciation or amortization and is:

- Personal property;
- Other tangible property (other than a building or its structural components) that is:
  - Used in manufacturing, production, extraction or furnishing transportation, communications, electrical energy, gas, water, or sewage disposal services;
  - A research facility;
  - A facility used in any of the activities for the bulk storage of fungible commodities;
- Real property (other than property described above) with an adjusted basis that was reduced by certain amortization deductions listed in section 1245(a)(3)(C) of the Internal Revenue Code;
- A single purpose agricultural or horticultural structure; or
- A storage facility (other than a building or its structural components) used for the distribution of petroleum.

2. Exception for Holding Real Property Placed in Service Before 1987

The at-risk rules do not apply to the holding of real property placed in service before 1987. They also do not apply to the holding of an interest acquired before 1987 in a pass-through entity engaged in holding real property placed in service before 1987. This exception does not apply to holding mineral property.
Personal property and services that are incidental to making real property available as living accommodations are included in the activity of holding real property. For example, making personal property, such as furniture, and services available when renting a hotel or motel room or a furnished apartment is considered incidental to making real property available as living accommodations.

3. Exception for Equipment Leasing by a Closely Held Corporation

If a closely held corporation is actively engaged in equipment leasing, the equipment leasing is treated as a separate activity not covered by the at-risk rules. A closely held corporation is actively engaged in equipment leasing if 50% or more of its gross receipts for the tax year are from equipment leasing. Equipment leasing means the leasing, purchasing, servicing, and selling of equipment that is § 1245 property.

However, equipment leasing does not include the leasing of master sound recordings and similar contractual arrangements for tangible or intangible assets associated with literary, artistic, or musical properties, such as books, lithographs of artwork, or musical tapes. A closely held corporation cannot exclude these leasing activities from the at-risk rules nor count them as equipment leasing for the gross receipts test.

The equipment leasing exclusion also is not available for leasing activities related to other at-risk activities, such as motion picture films and video tapes, farming, oil and gas properties, and geothermal deposits. For example, if a closely held corporation leases a video tape, it cannot exclude this leasing activity from the at-risk rules under the equipment leasing exclusion.

4. Special Exception for Qualified Corporations

A qualified corporation is not subject to the at-risk limits for any qualifying business carried on by the corporation. Each qualifying business is treated as a separate activity. A qualified corporation is a closely held corporation that is not:

- A personal holding company; or
- A personal service corporation.

B. “LOSS” DEFINED

A “loss” is the excess of allowable deductions from the activity for the year (including depreciation or amortization allowed or allowable and disregarding the at-risk limits) over income received or accrued from the activity during the year. Income does not include income from the recapture of previous losses.

IRS Form 6198 is used to figure how much loss from an activity can be deducted. The form must be filed with a tax return if a taxpayer has a loss from any part of an activity that is covered by the at-risk rules, and the individual is not at risk for some of his or her investment in the activity.
C. WHO IS AFFECTED

The at-risk limits apply to individuals (including partners and S corporation shareholders), estates, trusts, and certain closely held corporations (other than S corporations).

For the at-risk rules, a C corporation is a closely held corporation if at any time during the last half of the tax year, more than 50% in value of its outstanding stock is owned directly or indirectly by or for five or fewer individuals. To determine whether more than 50% in value of the stock is owned by five or fewer individuals, apply the following rules:

1. Stock owned directly or indirectly by or for a corporation, partnership, estate, or trust is considered owned proportionately by its shareholders, partners, or beneficiaries.

2. An individual is considered to own the stock directly or indirectly by or for his or her family. Family includes only brothers and sisters (including half-brothers and half-sisters), a spouse, ancestors, and lineal descendants.

3. If a person holds an option to buy stock, he or she is considered to be the owner of that stock.

4. When applying rule (1) or (2), stock considered owned by a person under rule (1) or (3) is treated as actually owned by that person. Stock considered owned by an individual under rule (2) is not treated as owned by the individual for again applying rule (2) to consider another the owner of that stock.

5. Stock that may be considered owned by an individual under either rule (2) or (3) is considered owned by the individual under rule (3).

D. AT-RISK AMOUNTS

An individual is considered at risk in any activity for:

- The money and adjusted basis of property he or she contributes to the activity; and
- Amounts he or she borrows for use in the activity if:
  - The individual is personally liable for repayment, or
  - The individual pledges property (other than property used in the activity) as security for the loan.

1. Amounts Borrowed

An individual is considered at risk for amounts borrowed to use in the activity if he or she is personally liable for repayment. An individual is also at risk if the amounts borrowed are secured by property other than property used in the activity. In this case, the amount considered at risk is the net fair market value of the individual’s interest in the pledged property. The net fair market value of property is its fair market value (determined on the date the property is pledged) less any prior (or superior) claims to which it is
subject. However, no property will be taken into account as security if it is directly or indirectly financed by debt that is secured by property the individual contributed to the activity.

If an individual borrows money to finance a contribution to an activity, he or she cannot increase the amount at risk by the contribution and the amount borrowed to finance the contribution. A taxpayer may increase his or her at-risk amount only once.

Even if an individual is personally liable for the repayment of a borrowed amount or he or she secures a borrowed amount with property other than property used in the activity, the individual is not considered at risk if he or she borrowed the money from a person having an interest in the activity or from someone related to a person having an interest in the activity. This does not apply to:

- Amounts borrowed by a corporation from a person whose only interest in the activity is as a shareholder of the corporation;
- Amounts borrowed from a person having an interest in the activity as a creditor; or
- Amounts borrowed after May 3, 2004, secured by real property used in the activity of holding real property (other than mineral property) that, if nonrecourse, would be qualified nonrecourse financing.

E. AMOUNTS NOT AT RISK

An individual is not considered at risk for amounts protected against loss through nonrecourse financing, guarantees, stop loss agreements, or other similar arrangements.

1. Nonrecourse Financing

Nonrecourse financing is financing for which an individual is not personally liable. If an individual borrows money to contribute to an activity and the lender’s only recourse is to their interest in the activity or the property used in the activity, the loan is a nonrecourse loan.

An individual is not considered at risk for his or her share of any nonrecourse loan used to finance an activity or to acquire property used in the activity unless the loan is secured by property not used in the activity. However, an individual is considered at risk for qualified nonrecourse financing secured by real property used in an activity of holding real property.

Qualified nonrecourse financing is financing for which no one is personally liable for repayment and that is:

- Borrowed in connection with the activity of holding real property;
- Secured by real property used in the activity;
- Not convertible from a debt obligation to an ownership interest; and
- Loaned or guaranteed by any federal, state, or local government, or borrowed from a qualified person.
The rules below apply to any financing incurred after August 3, 1998. Individuals can also choose to apply these rules to financing obtained before August 4, 1998. If an individual elects to do this, he or she must reduce the amounts at risk as a result of applying these rules to years ending before August 4, 1998, to the extent they increase the losses allowed for those years.

In determining whether qualified nonrecourse financing is secured only by real property used in the activity of holding real property, disregard property that is incidental to the activity of holding real property. Also disregard other property if the total gross fair market value of that property is less than 10% of the total gross fair market value of all the property securing the financing.

For this purpose, individuals should treat themselves as owning directly their proportional share of the assets in any partnership in which they own, directly or indirectly, an equity interest.

A qualified person is a person who actively and regularly engages in the business of lending money. The most common example is a bank.

2. Other Loss Limiting Arrangements

Any capital an individual contributed to an activity is not at risk if he or she is protected against economic loss by an agreement or arrangement for compensation or reimbursement. For example, an individual is not at risk if he or she will be reimbursed for part or all of any loss because of a binding agreement between themselves and another person.

<table>
<thead>
<tr>
<th>Examples</th>
</tr>
</thead>
</table>

**Example 1.** Some commercial feedlots reimburse investors against any loss sustained on sales of the fed livestock above a stated dollar amount per head. Under such stop loss orders, the investor is at risk only for the portion of the investor's capital for which the investor is not entitled to a reimbursement.

**Example 2.** Bill is personally liable for a mortgage, but he separately obtains insurance to compensate him for any payments he must actually make because of his personal liability. Bill is considered at risk only to the extent of the uninsured portion of the personal liability to which he is exposed. He can include in the amount he has at risk the amount of any premium he paid from his personal assets for the insurance. However, if Bill obtains casualty insurance or insurance protecting himself against tort liability, it does not affect the amount he is otherwise considered to have at risk.

F. REDUCTIONS OF AMOUNTS AT RISK

The amount an individual has at risk in any activity is reduced by any losses allowed in previous years under the at-risk rules. It may also be reduced because of distributions an individual received from the activity, debts changed from recourse to nonrecourse, or the initiation of a stop loss or similar agreement. If the amount at risk is reduced below zero, the individual’s previously allowed losses are subject to recapture, as explained next.
G. RECAPTURE RULE

If the amount an individual has at risk in any activity at the end of any tax year is less than zero, he or she must recapture at least part of the previously allowed losses. This is done by adding to the individual’s income from the activity for that year the lesser of the following amounts:

- The negative at-risk amount (treated as a positive amount); or
- The total amount of losses deducted in previous tax years beginning after 1978, minus any amounts the individual previously added to his or her income from that activity under this recapture rule.

The recapture income is not used to reduce any net loss from the activity for the tax year. Instead, the recaptured amount is treated as a deduction for the activity in the next tax year.
### CHAPTER 3: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

<table>
<thead>
<tr>
<th>1.</th>
<th>Which of the following is true regarding passive activity losses:</th>

### CHAPTER 3: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

1. A. Incorrect. Federal law limits the offset of passive activity losses to be offset only against passive activity income.

   B. Incorrect. While this is true, this is not the best answer.

   C. Incorrect. To the extent there is insufficient passive activity income against which to offset passive activity losses, it can be carried forward. However, this is not the most accurate answer.

   D. **CORRECT.** Both B and C are correct. Passive activity losses can only be offset against passive activity income. However, excess losses can be carried forward to subsequent tax years.

   *(See page 51 of the course material.)*

2. A. Incorrect. There is no affect of whether a lease is short or long term, or whether there is a lease at all, on whether income is considered to be from an active or a passive activity.

   B. **CORRECT.** Unless the taxpayer acted as a professional in the transaction, i.e., he used his real estate license to acquire the property, rents and other income are considered passive.

   C. Incorrect. The income is passive in this case regardless of the number of properties owned by the taxpayer unless he or she was involved as a real estate professional.

   D. Incorrect. The fact that rental income is a significant part of a taxpayer’s total income does not make the income active, rather than passive.

   *(See page 52 of the course material.)*

3. A. **CORRECT.** In this case, Bill participated for more than 500 hours during the year in active management of the business, and therefore his income from the business would not be classified as passive. The other men do not meet the test.

   B. Incorrect. Even regular attendance at meetings is not sufficient given the relatively small amount of time he devoted to the activity.

   C. Incorrect. Since neither partner put significant time into the business, it will be considered passive participation since the firm has employees putting in significantly more time.

   D. Incorrect. Only one of the responses is considered to have active or material involvement.

   *(See page 58 of the course material.)*
Chapter Objective

After completing this chapter, you should be able to:

- Recall what constitutes the basis of an investment.

I. BASIS OF INVESTMENT PROPERTY

Basis is a way of measuring an individual’s investment in property for tax purposes. Individuals must know the tax basis of their property to determine whether they have a gain or loss on its sale or other disposition. Investment property normally has an original basis equal to its cost. If an individual gets property in some way other than buying it, such as by gift or inheritance, its fair market value may be important in figuring the basis.

A. COST BASIS

The basis of property an investor buys is usually its cost. The cost is the amount paid in cash, debt obligations, or other property or services.

1. Unstated Interest

If an individual buys property on a time-payment plan that charges little or no interest, the basis of the property is the stated purchase price, minus the amount considered to be unstated interest. An individual generally has unstated interest if his or her interest rate is less than the applicable federal rate.

B. BASIS OTHER THAN COST

There are times when an individual must use a basis other than cost. In these cases, he or she may need to know the property’s fair market value or the adjusted basis of the previous owner.

Fair market value is the price at which the property would change hands between a buyer and a seller, neither being forced to buy or sell and both having reasonable knowledge of all the relevant facts. Sales of similar property, around the same date, may be helpful in figuring fair market value.

1. Property Received for Services

If an individual receives investment property for services, he or she must include the property’s fair market value in income. The amount included in income then becomes the basis in the property. If the services were performed for a price that was agreed to beforehand, this price will be accepted as the fair market value of the property if there is no evidence to the contrary.
a. Restricted Property

If an individual receives, as payment for services, property that is subject to certain restrictions, his or her basis in the property generally is its fair market value when it becomes substantially vested. Property becomes substantially vested when it is transferable or is no longer subject to substantial risk of forfeiture, whichever happens first.

b. Bargain Purchases

If an individual buys investment property at less than fair market value, as payment for services, he or she must include the difference in income. The person’s basis in the property is the price he or she pays plus the amount he or she includes in income.

2. Property Received in Taxable Trades

If investment property is received in trade for other property, the basis of the new property is its fair market value at the time of the trade unless the individual received the property in a nontaxable trade.

Example

Rich trades A Company stock for B Company stock having a fair market value of $1,200. If the adjusted basis of the A Company stock is less than $1,200, Rich has a taxable gain on the trade. If the adjusted basis of the A company stock is more than $1,200, Rich has a deductible loss on the trade. The basis of his B Company stock is $1,200. If he later sells the B Company stock for $1,300, Rich will have a gain of $100.

3. Property Received in Nontaxable Trades

If an investor has a nontaxable trade, he or she does not recognize gain or loss until he or she disposes of the property he or she received in the trade. The basis of property received in a nontaxable or partly nontaxable trade is generally the same as the adjusted basis of the property given up. This amount is increased by any cash paid, additional costs, and gain recognized. This amount is reduced by any cash or unlike property received, any loss recognized, and any liability that was assumed or treated as assumed.

4. Property Received From Spouse

If property is transferred to an individual from his or her spouse (or former spouse, if the transfer is incident to divorce), the person’s basis is the same as his or her spouse’s or former spouse’s adjusted basis just before the transfer.
5. Property Received as a Gift

To figure the basis in property received as a gift, the owner must know its adjusted basis to the donor just before it was given to him or her, its fair market value at the time it was given to him or her, the amount of any gift tax paid on it, and the date it was given to him or her.

If the fair market value of the property at the time of the gift was less than the donor’s adjusted basis just before the gift, the owner’s basis for gain on its sale or other disposition is the same as the donor’s adjusted basis plus or minus any required adjustments to basis during the period they hold the property. The owner’s basis for loss is its fair market value at the time of the gift plus or minus any required adjustments to basis during the period he or she holds the property.

If the individual uses the basis for figuring a gain and the result is a loss, and then uses the basis for figuring a loss and the result is a gain, he or she will have neither a gain nor a loss.

Example

Rex receives a gift of investment property having an adjusted basis of $10,000 at the time of the gift. The fair market value at the time of the gift is $9,000. Rex later sells the property for $9,500. He has neither gain nor loss. Rex’s basis for figuring gain is $10,000, and $10,000 minus $9,500 results in a $500 loss. His basis for figuring loss is $9,000, and $9,500 minus $9,000 results in a $500 gain.

If the fair market value of the property at the time of the gift was equal to or more than the donor’s adjusted basis just before the gift, the owner’s basis for gain or loss on its sale or other disposition is the donor’s adjusted basis plus or minus any required adjustments to basis during the period they hold the property. Also, the owner may be allowed to add to the donor’s adjusted basis all or part of any gift tax paid, depending on the date of the gift. If the property was received as a gift before 1977, the basis in the property is the donor’s adjusted basis increased by the total gift tax paid on the gift. However, the owner’s basis cannot be more than the fair market value of the gift at the time it was gifted.

If an individual received property as a gift after 1976, his or her basis is the donor’s adjusted basis increased by the part of the gift tax paid that was for the net increase in value of the gift. The owner can figure this part by multiplying the gift tax paid on the gift by a fraction. The numerator (top part) is the net increase in value of the gift and the denominator (bottom part) is the amount of the gift.
The net increase in value of the gift is the fair market value of the gift minus the donor’s adjusted basis. The amount of the gift is its value for gift tax purposes after reduction by any annual exclusion and marital or charitable deduction that applies to the gift.

If an individual receives property in a transfer that is partly a sale and partly a gift, his or her basis is the larger of the amount he or she paid for the property or the transferor’s adjusted basis in the property at the time of the transfer. Add to that amount the amount of any gift tax paid on the gift. For figuring loss, the individual’s basis is limited to the property’s fair market value at the time of the transfer.

6. Property Received as Inheritance

a. Before or After 2010

If an individual inherited property from a decedent who died before or after 2010, or who died in 2010 and the executor of the decedent’s estate elected not to file Form 8939, Allocation of Increase in Basis for Property Acquired From a Decedent, his or her basis in that property generally is its fair market value (its appraised value on Form 706, United States Estate (and Generation-Skipping Transfer) Tax Return) on:

- The date of the decedent’s death, or
- The later alternate valuation date if the estate qualifies for, and elects to use, alternate valuation.

If the estate filed Form 706 after July 31, 2015, the individual may receive an information statement from the estate showing the value of the inherited property.

If no Form 706 was filed, use the appraised value on the date of death for state inheritance or transmission taxes. For stocks and bonds, if no Form 706 was filed and there are no state inheritance or transmission taxes, see the Form 706 instructions for figuring the fair market value of the stocks and bonds on the date of the decedent’s death.

b. Appreciated Property Given to the Decedent.

The individual’s basis in certain appreciated property that he or she inherited is the decedent’s adjusted basis in the property immediately before death rather than its fair market value. This applies to appreciated property that the individual or his or her spouse gave the decedent as a gift during the 1-year period ending on the date of death. Appreciated property is any property whose fair market value on the day it was given to the decedent was more than its adjusted basis.

c. Inherited in 2010 and Executor Elected to File Form 8939

If an individual inherited property from a decedent who died in 2010 and the executor made the election to file Form 8939, see Publication 4895, Tax Treatment of Property Acquired From a Decedent Dying in 2010, to figure the basis.
C. ADJUSTED BASIS

Before an individual can figure any gain or loss on a sale, exchange, or other disposition of property or figure allowable depreciation, depletion, or amortization, he or she usually must make certain adjustments (increases and decreases) to the basis of the property. The result of these adjustments to the basis is the adjusted basis.

1. Stocks and Bonds

The basis of stocks or bonds generally is the purchase price plus the costs of purchase, such as commissions and recording or transfer fees. If the owner acquired stocks or bonds other than by purchase, the basis is usually determined by the fair market value or the previous owner’s adjusted basis.

The basis of stock must be adjusted for certain events that occur after purchase. For example, if a person receives more stock from nontaxable stock dividends or stock splits, the person must reduce the basis of his or her original stock. The person must also reduce his or her basis when he or she receives nondividend distributions, because these distributions, up to the amount of the basis, are a nontaxable return of capital.

If an investor can adequately identify the shares of stock or the bonds he or she sold, the investor’s basis is the cost or other basis of the particular shares of stock or bonds. If an investor buys and sells securities at various times in varying quantities and cannot adequately identify the shares sold, the basis of the securities sold is the basis of the securities acquired first. Except for certain mutual fund shares, the investor cannot use the average price per share to figure gain or loss on the sale of the shares.

Example

Steve bought 100 shares of stock of XYZ Corporation in 2001 for $10 a share. In January 2002 he bought another 200 shares for $11 a share. In July 2002 he gave his son 50 shares. In December 2004 Steve bought 100 shares for $9 a share. In April 2016 he sold 130 shares. Steve cannot identify the shares he disposed of, so he must use the stock he acquired first to figure the basis. The shares of stock he gave his son had a basis of $500 (50 × $10). Steve figures the basis of the 130 shares of stock he sold in 2016 as follows:

<table>
<thead>
<tr>
<th>Shares (Price per Share)</th>
<th>Basis</th>
</tr>
</thead>
<tbody>
<tr>
<td>50 shares (50 × $10)</td>
<td>$500</td>
</tr>
<tr>
<td>80 shares (80 × $11)</td>
<td>$880</td>
</tr>
<tr>
<td>Total basis of stock sold</td>
<td>$1,380</td>
</tr>
</tbody>
</table>

An investor will make an adequate identification if he or she shows that certificates representing shares of stock from a lot that he or she bought on a certain date or for a certain price were delivered to his or her broker or other agent. If the investor has left the stock certificates with his or her broker or other agent, he or she will make an adequate identification if the investor:
• Tells his or her broker or other agent the particular stock to be sold or transferred at the
time of the sale or transfer, and

• Receive a written confirmation of this from his or her broker or other agent within a
reasonable time.

Stock identified this way is the stock sold or transferred even if stock certificates from a different lot are
delivered to the broker or other agent.

If an investor bought stock in different lots at different times and holds a single stock certificate for this
stock, the investor will make an adequate identification if he or she:

• Tells his or her broker or other agent the particular stock to be sold or transferred when he
or she delivers the certificate to his or her broker or other agent; and

• Receive a written confirmation of this from his or her broker or other agent within a
reasonable time.

If an investor sells part of the stock represented by a single certificate directly to the buyer instead of
through a broker, he or she will make an adequate identification if he or she keeps a written record of
the particular stock that he or she intends to sell. These methods of identification of stocks also apply to
bonds sold or transferred.

a. Shares in a Mutual Fund or REIT

The basis of shares in a mutual fund (or other regulated investment company) or a real estate investment
trust (REIT) is generally figured in the same way as the basis of other stock and usually includes any
commissions or load charges paid for the purchase.

b. Commissions and Load Charges

The fees and charges paid to acquire or redeem shares of a mutual fund are not deductible. An investor
can usually add acquisition fees and charges to the cost of the shares and thereby increase the basis. A
fee paid to redeem the shares is usually a reduction in the redemption price (sales price).

An investor cannot add the entire acquisition fee or load charge to the cost of the mutual fund shares
acquired if all of the following conditions apply.

1. The investor gets a reinvestment right because of the purchase of the shares or the
payment of the fee or charge.

2. The investor disposes of the shares within 90 days of the purchase date.

3. The investor acquires new shares in the same mutual fund or another mutual fund, for
which the fee or charge is reduced or waived because of the reinvestment right he or she
got when he or she acquired the original shares.
The amount of the original fee or charge in excess of the reduction in (3) is added to the cost of the original shares. The rest of the original fee or charge is added to the cost basis of the new shares (unless all three conditions above also apply to the purchase of the new shares).

c. Average Basis for Mutual Fund Shares

Investors can choose to use the average basis of mutual fund shares if they acquired the identical shares at various times and prices, or they acquired the shares after 2011 in connection with a dividend reinvestment plan, and left them on deposit in an account kept by a custodian or agent.

d. Undistributed Capital Gains

If an investor had to include in his or her income any undistributed capital gains of the mutual fund or REIT, the investor can increase his or her basis in the stock by the difference between the amount the investor included and the amount of tax paid for him or her by the fund or REIT.

e. Automatic Investment Service

If an investor participates in an automatic investment service, his or her basis for each share of stock, including fractional shares, bought by the bank or other agent is the purchase price plus a share of the broker’s commission.

f. Dividend Reinvestment Plans

If an investor participates in a dividend reinvestment plan and receives stock from the corporation at a discount, his or her basis is the full fair market value of the stock on the dividend payment date. The investor must include the amount of the discount in his or her income.

g. Stock Dividends

Stock dividends are distributions made by a corporation to the owners of its stock. Generally, stock dividends are not taxable to shareholders. If the stock dividends are not taxable, investors must divide their basis for the old stock between the old and new stock. If the new stock the investor received as a nontaxable dividend is identical to the old stock on which the dividend was declared, the investor should divide the adjusted basis of the old stock by the number of shares of old and new stock. The result is his or her basis for each share of stock.

<table>
<thead>
<tr>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Example 1.</strong> Kim owned one share of common stock that she bought for $45. The corporation distributed two new shares of common stock for each share held. Kim then had three shares of common stock. Her basis in each share is $15 ($45 ÷ 3).</td>
</tr>
<tr>
<td><strong>Example 2.</strong> Kim owned two shares of common stock. She had bought one for $30 and the other for $45. The corporation distributed two new shares of common stock for each share held. Kim had six shares after the distribution – three with a basis of $10 each ($30 ÷ 3) and three with a basis of $15 each ($45 ÷ 3).</td>
</tr>
</tbody>
</table>
If the new stock the investor received as a nontaxable dividend is not identical to the old stock on which it was declared, the basis of the new stock is calculated differently. In this case, the investor should divide the adjusted basis of the old stock between the old and the new stock in the ratio of the fair market value of each lot of stock to the total fair market value of both lots on the date of distribution of the new stock.

**Example**

Richard bought a share of common stock for $100. Later, the corporation distributed a share of preferred stock for each share of common stock held. At the date of distribution, Richard’s common stock had a fair market value of $150 and the preferred stock had a fair market value of $50. Richard can figure the basis of the old and new stock by dividing his $100 basis between them. The basis of his common stock is $75 ($150/$200 × $100), and the basis of the new preferred stock is $25 ($50/$200 × $100).

### II. WASH SALES

Individuals cannot deduct losses from sales or trades of stock or securities in a wash sale unless the loss was incurred in the ordinary course of the individual’s business as a dealer in stock or securities. A wash sale occurs when someone sells or trades stock or securities at a loss and within 30 days before or after the sale the individual:

- Buys substantially identical stock or securities;
- Acquires substantially identical stock or securities in a fully taxable trade;
- Acquires a contract or option to buy substantially identical stock or securities; or
- Acquires substantially identical stock for the individual’s individual retirement account (IRA) or Roth IRA.

If an individual sells stock and his or her spouse or a corporation he or she controls buys substantially identical stock, the individual also has a wash sale. If the loss was disallowed because of the wash sale rules, the individual must add the disallowed loss to the cost of the new stock or securities (except in the last item above). The result is the individual’s basis in the new stock or securities. This adjustment postpones the loss deduction until the disposition of the new stock or securities. The holding period for the new stock or securities begins on the same day as the holding period of the stock or securities sold.
Examples

Example 1. Nick buys 100 shares of X stock for $1,000. Nick sells these shares for $750 and within 30 days from the sale he buys 100 shares of the same stock for $800. Because he bought substantially identical stock, he cannot deduct his loss of $250 on the sale. However, Nick will add the disallowed loss of $250 to the cost of the new stock, $800, to obtain his basis in the new stock, which is $1,050.

Example 2. Nancy is an employee of a corporation that has an incentive pay plan. Under this plan, Nancy is given 10 shares of the corporation’s stock as a bonus award. She includes the fair market value of the stock in her gross income as additional pay. Nancy later sells these shares at a loss. If she receives another bonus award of substantially identical stock within 30 days of the sale, she cannot deduct her loss on the sale.

A. OPTIONS AND FUTURES CONTRACTS

The wash sale rules apply to losses from sales or trades of contracts and options to acquire or sell stock or securities. They do not apply to losses from sales or trades of commodity futures contracts and foreign currencies. Losses from the sale, exchange, or termination of a securities futures contract to sell generally are treated in the same manner as losses from the closing of a short sale.

1. Warrants

The wash sale rules apply if someone sells common stock at a loss and, at the same time, buys warrants for common stock of the same corporation. But if the individual sells warrants at a loss and, at the same time, buys common stock in the same corporation, the wash sale rules apply only if the warrants and stock are considered substantially identical, as discussed next.

B. SUBSTANTIALLY IDENTICAL

In determining whether stock or securities are substantially identical, one must consider all the facts and circumstances in each particular case. Ordinarily, stocks or securities of one corporation are not considered substantially identical to stocks or securities of another corporation. However, they may be substantially identical in some cases. For example, in a reorganization, the stocks and securities of the predecessor and successor corporations may be substantially identical.

Similarly, bonds or preferred stock of a corporation are not ordinarily considered substantially identical to the common stock of the same corporation. However, where the bonds or preferred stock are convertible into common stock of the same corporation, the relative values, price changes, and other circumstances may make these bonds or preferred stock and the common stock substantially identical.
For example, preferred stock is substantially identical to the common stock if the preferred stock:

- Is convertible into common stock;
- Has the same voting rights as the common stock;
- Is subject to the same dividend restrictions;
- Trades at prices that do not vary significantly from the conversion ratio; and
- Is unrestricted as to convertibility.

C. MORE OR LESS STOCK BOUGHT THAN SOLD

If the number of shares of substantially identical stock or securities an individual buys within 30 days before or after the sale is either more or less than the number of shares sold, they must determine the particular shares to which the wash sale rules apply. This is done by matching the shares bought with an equal number of the shares sold. The shares or securities so matched are subject to the wash sale rules.

**Examples**

**Example 1.** David bought 100 shares of M stock on September 26, 2015, for $5,000. On December 19, 2015, he bought 50 shares of substantially identical stock for $2,750. On December 27, 2015, David bought 25 shares of substantially identical stock for $1,125. On January 9, 2016, he sold for $4,000 the 100 shares he bought in September. David has a $1,000 loss on the sale. However, because he bought 75 shares of substantially identical stock within 30 days of the sale, he cannot deduct the loss ($750) on 75 shares. He can deduct the loss ($250) on the other 25 shares. The basis of the 50 shares bought on December 19, 2015, is increased by two-thirds (50 ÷ 75) of the $750 disallowed loss. The new basis of those shares is $3,250 ($2,750 + $500). The basis of the 25 shares bought on December 27, 2015, is increased by the rest of the loss to $1,375 ($1,125 + $250).

**Example 2.** David bought 100 shares of M stock on September 26, 2015. On February 6, 2016, he sold those shares at a $1,000 loss. On each of the 4 days from February 11-14, 2016, David bought 50 shares of substantially identical stock. He cannot deduct his $1,000 loss. David must add half the disallowed loss ($500) to the basis of the 50 shares bought on February 11. Add the other half ($500) to the basis of the shares bought on February 12.

D. GAIN AND LOSS ON SAME DAY

Losses from a wash sale of one block of stock or securities cannot be used to reduce any gains on identical blocks sold the same day.
E. DEALERS

The wash sale rules do not apply to a dealer in stock or securities if the loss is from a transaction made in the ordinary course of business.

F. SHORT SALES

The wash sale rules apply to a loss realized on a short sale if an individual sells, or enters into another short sale of, substantially identical stock or securities within a period beginning 30 days before the date the short sale is complete and ending 30 days after that date.

For purposes of the wash sale rules, a short sale is considered complete on the date the short sale is entered into, if:

- On that date, the investor owns stock or securities identical to those sold short (or by that date the investor enters into a contract or option to acquire that stock or those securities); and
- The investor later delivers the stock or securities to close the short sale.

Otherwise, a short sale is not considered complete until the property is delivered to close the sale. This treatment also applies to losses from the sale, exchange, or termination of a securities futures contract to sell.

Example

On June 4, Lucy buys 100 shares of stock for $1,000. She sells short 100 shares of the stock for $750 on October 15. On October 16, Lucy buys 100 shares of the same stock for $750. She closes the short sale on November 19 by delivering the shares bought on June 4. Lucy cannot deduct the $250 loss ($1,000 - $750) because the date of entering into the short sale (October 15) is considered the date the sale is complete for wash sale purposes and Lucy bought substantially identical stock within 30 days from that date.
The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

### 1. What is the basis of property transferred from one spouse to another:

- **A.** its fair market value at the time it was acquired by the transferor spouse
- **B.** the fair market value at the time of the transfer
- **C.** the adjusted basis of the spouse at the time of the transfer
- **D.** the higher of A and C above

### 2. Which of the following determines the basis of stocks or bonds:

- **A.** the purchase price of the stocks or bonds alone
- **B.** the purchase price of the stocks or bonds in addition to any costs associated with the purchase
- **C.** the fair market value at the time of purchase
- **D.** the lesser of A and C above

### 3. How does the “wash rule” affect tax issues related to the sale of stocks:

- **A.** it prohibits taxpayers from taking losses from the sale of stocks they sold and substantially repurchased within 30 days
- **B.** it limits profits of people who seek financial gain with “unclean” hands
- **C.** it limits insiders from selling shares short when they know a company is going to announce bad news
- **D.** it prohibits shareholders from selling stock unless they have owned it for at least 30 days
Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

| 1. | **A.** Incorrect. The original basis is not used when it is transferred from one spouse to another. |
|    | **B.** Incorrect. The adjusted basis of the transferor spouse becomes the basis for the receiving spouse, not the fair market value. |
|    | **C.** CORRECT. The receiving person’s basis is the same as the adjusted basis of the transferring spouse, whether or not the transfer is incident to divorce. |
|    | **D.** Incorrect. There is no such choice. |

*(See page 72 of the course material.)*

| 2. | **A.** Incorrect. The purchase price is only part of the equation used to determine the basis of stocks or bonds. |
|    | **B.** CORRECT. The purchase price is added to acquisition costs, such as brokerage fees and commissions, in order to determine the basis. |
|    | **C.** Incorrect. The actual purchase price is what is relevant, not the fair market value to the extent there is a difference. |
|    | **D.** Incorrect. Only the actual purchase price is relevant in making this determination. |

*(See page 75 of the course material.)*

| 3. | **A.** CORRECT. The wash sale rule keeps taxpayers from selling a stock at a loss and substantially repurchasing the stock within 30 days and taking a tax loss on the transaction. |
|    | **B.** Incorrect. This rule has nothing to do with corporate greed or criminal action. |
|    | **C.** Incorrect. The rule is not aimed at insiders. |
|    | **D.** Incorrect. The rule does not prohibit such sales. However, it limits the ability of taxpayers to deduct losses from such transactions. |

*(See page 78 of the course material.)*
CHAPTER 5: SALE OF A HOME

Chapter Objective

After completing this chapter, you should be able to:

• Recognize the tax rules that apply when an individual sells his or her home.

I. INTRODUCTION AND OVERVIEW

For most Americans, the largest investment anyone will ever have is their home. It is therefore essential that accountants be able to advise their clients on the various tax implications of selling a home. This chapter explains the tax rules that apply when an individual sells his or her main home.

II. MAIN HOME

This section explains the term “main home.” Usually, the home an individual lives in most of the time is his or her main home and can be

• House;
• Houseboat;
• Mobile home;
• Cooperative apartment; or
• Condominium.

To exclude gain, an individual generally must have owned and lived in the property as his or her main home for at least two years during the five-year period ending on the date of sale.

A. SALE OF LAND ONLY

If an individual sells the land on which his or her main home is located, but not the house itself, he or she cannot exclude any gain he or she has from the sale of the land. However, if the individual sells vacant land used as part of his or her main home, and that is adjacent to it, the individual may be able to exclude the gain from the sale under certain circumstances.
Example

Bill buys a piece of land and moves his main home to it. Then he sells the land on which his main home was located. This sale is not considered a sale of Bill’s main home, and he cannot exclude any gain on the sale of the land.

B. MORE THAN ONE HOME

If an individual has more than one home, he or she can exclude gain only from the sale of his or her main home. A taxpayer must include in income the gain from the sale of any other home. If an individual has two homes and lives in both of them, his or her main home is ordinarily the one he or she lives in most of the time during the year.

Examples

Example 1. Lisa owns two homes, one in New York and one in Florida. From 2012 through 2016, Lisa lives in the New York home for 7 months and in the Florida residence for 5 months of each year. In the absence of facts and circumstances indicating otherwise, the New York home is Lisa’s main home. She would be eligible to exclude the gain from the sale of the New York home but not of the Florida home in 2016.

Example 2. Connie owns a house, but she lives in another house that she rents. The rented house is Connie’s main home.

C. PROPERTY USED PARTLY AS MAIN HOME

If an individual uses only part of the property as his or her main home, the rules discussed in this chapter apply only to the gain or loss on the sale of that part of the property.

III. FIGURING GAIN OR LOSS

To figure the gain or loss on the sale of an individual’s main home, the owner must know the selling price, the amount realized, and the adjusted basis. Subtract the adjusted basis from the amount realized to get the individual's gain or loss.

A. SELLING PRICE

The selling price is the total amount an individual receives for his or her home. It includes money, all notes, mortgages, or other debts assumed by the buyer as part of the sale, and the fair market value of any other property or any services the seller receives.
In some cases, an individual may have to sell his or her home because of a job transfer. If an employer pays an employee for a loss on the sale or for his or her selling expenses, the seller should not include the payment as part of the selling price. Rather, the employer will include the amount paid as wages and it will become part of the individual’s gross income.

1. Option to Buy

If a buyer pays for an option to buy and later exercises the option, the amount received by the seller for the option must be added to the selling price of the home. If the option is not exercised, the seller must report the payment as ordinary income in the year the option expired.

B. AMOUNT REALIZED

The amount realized is the selling price of the home minus selling expenses. Selling expenses include all of the following:

- Commissions;
- Advertising fees;
- Legal fees; and
- Loan charges paid by the seller, such as loan placement fees or “points.”

C. ADJUSTED BASIS

While the seller owned his or her home, the seller may have made adjustments (increases or decreases) to the basis. If so, this adjusted basis must be determined before the seller can figure gain or loss on the sale of the home.

D. AMOUNT OF GAIN OR LOSS

To figure the amount of gain or loss, the amount realized is compared to the adjusted basis. If the amount realized is more than the adjusted basis, the difference is a gain and, except for any part the seller can exclude, generally is taxable. If the amount realized is less than the adjusted basis, the difference is a loss. A loss on the sale of an individual’s main home cannot be deducted.

1. Jointly Owned Home

If an individual and his or her spouse sell their jointly owned home and file a joint return, they will calculate their gain or loss as one taxpayer.

a. Separate Returns

If a seller files a separate return from his or her spouse, each spouse must calculate his or her own gain or loss according to his or her ownership interest in the home. Each spouse’s ownership interest is determined by state law.
b. Joint Owners Not Married

If two owners who are not married sell their jointly owned home, each must calculate their own gain or loss according to their ownership interest in the home.

E. OTHER DISPOSITIONS

The following rules apply to foreclosures and repossessions, abandonments, trades, and transfers to a spouse.

1. Foreclosure and Repossession

If an individual’s home was foreclosed on or repossessed, the owner is treated as having a disposition. The owner will figure his or her gain or loss in generally the same way as a normal sale. However, the amount of the gain or loss depends, in part, on whether the owner was personally liable for repaying the debt secured by the home. An individual also may realize ordinary income from cancellation of debt if the loan balance is more than the fair market value of the property.

2. Nonrecourse Debt

If an individual is not personally liable for repaying the debt (nonrecourse debt) secured by the transferred property, the amount they realize includes the full debt canceled by the transfer. The full canceled debt is included even if the fair market value of the property is less than the canceled debt.

**Examples**

**Example 1.** Chris bought a new car for $15,000. He paid $2,000 down and borrowed the remaining $13,000 from the dealer’s credit company. Chris is not personally liable for the loan (nonrecourse), but pledges the new car as security. The credit company repossessed the car because he stopped making loan payments. The balance due after taking into account the payments Chris made was $10,000. The fair market value of the car when repossessed was $9,000. The amount Chris realized on the repossession is $10,000. That is the debt canceled by the repossession, even though the car’s fair market value is less than $10,000. Chris figures his gain or loss on the repossession by comparing the amount realized ($10,000) with his adjusted basis ($15,000). He has a $5,000 nondeductible loss.
Examples

**Example 2.** Abena paid $200,000 for her home. She paid $15,000 down and borrowed the remaining $185,000 from a bank. Abena is not personally liable for the loan (nonrecourse debt), but pledges the house as security. The bank foreclosed on the loan because Abena stopped making payments. When the bank foreclosed on the loan, the balance due was $180,000, the fair market value of the house was $170,000, and Abena’s adjusted basis was $175,000 due to a casualty loss she had deducted. The amount Abena realized on the foreclosure is $180,000, the debt canceled by the foreclosure. She figures her gain or loss by comparing the amount realized ($180,000) with her adjusted basis ($175,000). She has a $5,000 realized gain.

3. **Recourse Debt**

If an individual is personally liable for the debt (recourse debt), the amount realized on the foreclosure or repossession does not include the canceled debt that is the individual’s income from cancellation of debt. However, if the fair market value of the transferred property is less than the canceled debt, the amount realized includes the canceled debt up to the fair market value of the property. The owner is treated as receiving ordinary income from the canceled debt for the part of the debt that is more than the fair market value.

Examples

**Example 1.** Assume the same facts as in the previous Example 1, except Chris is personally liable for the car loan (recourse debt). In this case, the amount he realizes is $9,000. This is the canceled debt ($10,000) up to the car’s fair market value ($9,000). Chris figures his gain or loss on the repossession by comparing the amount realized ($9,000) with his adjusted basis ($15,000). He has a $6,000 nondeductible loss. He also is treated as receiving ordinary income from cancellation of debt. That income is $1,000 ($10,000 - $9,000). This is the part of the canceled debt not included in the amount realized.

**Example 2.** Assume the same facts as in the previous Example 2, except Abena is personally liable for the loan (recourse debt). In this case, the amount she realizes is $170,000. This is the canceled debt ($180,000) up to the fair market value of the house ($170,000). Abena figures her gain or loss on the foreclosure by comparing the amount realized ($170,000) with her adjusted basis ($175,000). She has a $5,000 nondeductible loss. She also is treated as receiving ordinary income from cancellation of debt. That income is $10,000 ($180,000 - $170,000). This is the part of the canceled debt not included in the amount realized.
4. **Seller’s (Lender’s) Gain or Loss on Repossession**

If an individual or entity finances a buyer’s purchase of property and later acquires an interest in it through foreclosure or repossession, he or she may have a gain or loss on the acquisition.

5. **Cancellation of Debt**

If property that is repossessed or foreclosed on secures a debt for which the owner is personally liable (recourse debt), he or she generally must report as ordinary income the amount by which the canceled debt is more than the fair market value of the property. This income is separate from any gain or loss realized from the foreclosure or repossession.

**F. ABANDONMENT**

If an individual abandons his or her home, the individual may have ordinary income. If the abandoned home secures a debt for which the owner is personally liable and the debt is canceled, the owner has ordinary income equal to the amount of the canceled debt.

**G. TRADING HOMES**

If an individual trades his or her old home for another home, the individual should treat the trade as a sale and a purchase.

**Example**

Ray owned and lived in a home that had an adjusted basis of $41,000. A real estate dealer accepted his old home as a trade-in and allowed him $50,000 toward a new home priced at $80,000. This is treated as a sale of his old home for $50,000 with a gain of $9,000 ($50,000 – $41,000). If the dealer had allowed Ray $27,000 and assumed Ray’s unpaid mortgage of $23,000 on his old home, Ray’s sales price would still be $50,000 (the $27,000 trade-in allowed plus the $23,000 mortgage assumed).

**H. TRANSFER TO A SPOUSE**

If an owner transfers his or her home to a spouse, or to a former spouse incident to a divorce, there is generally no gain or loss. This is true even if the individual receives cash or other consideration for the home. Therefore, the rules in this chapter do not apply.

**Example**

Linda and George purchased a home while they were married and lived there together for several years. The couple divorced. As part of the settlement, Linda received the home. Linda paid George for the value of his half of the property and retained sole title to the home. This transaction does not result in any gain to Linda based on the valuation of the house.
IV. DETERMINING BASIS

To calculate whether there has been a gain or a loss, a seller must know the basis of his or her home. In general, a seller’s basis is determined by how he or she got the home. If a seller either bought or built the home, the seller’s basis is generally his or her actual cost. If the seller got the home in some other way, i.e., through inheritance or as a gift, the seller’s basis is generally the fair market value of the property at the time they received it, or, in the alternative, the adjusted basis of the person from whom he or she got the property.

While living in the home, the seller may have made adjustments to his or her basis. This is referred to as the adjusted basis of the home, and must also be calculated to determine gain or loss.

A. COST AS A BASIS

The cost of property is the amount the owner pays for it in cash, debt, obligation, other property or services.

1. Purchase

If an individual buys his or her home, the individual’s basis is its cost. This includes the purchase price and certain settlement or closing costs. Generally, the purchase price includes the down payment and any debt, such as a first or second mortgage or notes the individual gave the seller in payment for the home. If an individual builds, or contracts to build, a new home, the purchase price can include costs of construction.

2. Settlement Fees

When the seller bought the home, he or she may have paid settlement fees or closing costs in addition to the contract price of the property. A seller can include in his or her basis some of the settlement fees and closing costs he or she paid for buying the home. The seller cannot include in his or her basis the fees and costs for getting a mortgage loan. A fee paid for buying the home is any fee the individual would have had to pay even if he or she had paid cash for the home.

B. ADJUSTED BASIS

Adjusted basis is an individual’s basis increased or decreased by certain amounts.

1. Increases to Basis

These include any:

- Additions and other improvements that have a useful life of more than one year;
- Special assessments for local improvements; and
- Amounts the owner spent after a casualty to restore damaged property.
a. Improvements

These add to the value of a home, prolong its useful life, or adapt it to new uses. An owner adds the cost of additions and other improvements to the basis of his or her property. Examples include putting a recreation room or another bathroom in an unfinished basement, putting up a new fence, putting in new plumbing or wiring, putting on a new roof, or paving an unpaved driveway are improvements. An addition to a house, such as a new deck, a sunroom, or a garage, is also an improvement.

b. Repairs

These maintain a home in good condition but do not add to its value or prolong its life. Owners do not add their cost to the basis of their property. Examples include repainting a house inside or outside, fixing gutters or floors, repairing leaks or plastering, and replacing broken windows.

2. Decreases to Basis

These include any:

- Discharge of qualified principal residence indebtedness that was excluded from income.
- Some or all of the cancellation of debt income that was excluded due to bankruptcy or insolvency.
- Gain the owner postponed from the sale of a previous home before May 7, 1997.
- Deductible casualty losses.
- Insurance payments the owner received or expects to receive for casualty losses.
- Payments the owner received for granting an easement or right-of-way.
- Depreciation allowed or allowable if the owner used his or her home for business or rental purposes.
- Energy-related credits allowed for expenditures made on the residence.
- Adoption credit the owner claimed for improvements added to the basis of his or her home.
- Nontaxable payments from an adoption assistance program of the owner’s employer that he or she used for improvements added to the basis of the home.
- Energy conservation subsidy excluded from the owner’s gross income because he or she received it (directly or indirectly) from a public utility after 1992 to buy or install any energy conservation measure. An energy conservation measure is an installation or modification that is primarily designed either to reduce consumption of electricity or natural gas or to improve the management of energy demand for a home.
• District of Columbia first-time homebuyer credit (allowed on the purchase of a principal residence in the District of Columbia beginning on August 5, 1997 and before January 1, 2012).

• General sales taxes (allowed beginning 2004 and ending before 2014) claimed as an itemized deduction on Schedule A (Form 1040) that were imposed on the purchase of personal property, such as a houseboat used as a home or a mobile home.

### Note: Importance of Recordkeeping

Homeowners should keep records to prove their home’s adjusted basis. Ordinarily, an owner must keep records for three years after the due date for filing their return for the tax year in which the owner sold his or her home. But, if the owner sold a home before May 7, 1997, and postponed tax on any gain, the basis of that home affects the basis of the new home he or she bought. Owners should keep records proving the basis of both homes as long as they are needed for tax purposes. The records individuals should keep include:

- Proof of the home’s purchase price and purchase expenses;
- Receipts and other records for all improvements, additions, and other items that affect the home’s adjusted basis;
- Any worksheets that the owner used to figure the adjusted basis of the home he or she sold, the gain or loss on the sale, the exclusion, and the taxable gain;
- Any Form 982 the owner filed to report any discharge of qualified principal residence indebtedness;
- Any Form 2119, *Sale of Your Home*, that the owner filed to postpone gain from the sale of a previous home before May 7, 1997; and
- Any worksheets the owner used to prepare Form 2119, such as the *Adjusted Basis of Home Sold Worksheet or the Capital Improvements Worksheet* from the Form 2119 instructions.

### V. EXCLUDING THE GAIN

Taxpayers may qualify to exclude from their income all or part of any gain from the sale of their main home. This means that, if they qualify, they will not have to pay tax on the gain up to the limit described later. To qualify, the taxpayer must meet the ownership and use tests described later. A taxpayer can choose not to take the exclusion. In that case, the taxpayer must include the gain from the sale in his or her gross income on his or her tax return for the year of the sale.
A. MAXIMUM EXCLUSION

1. $250,000 Exclusion

Individuals can exclude up to $250,000 of the gain on the sale of their main home if all of the following are true:

- They meet the ownership test;
- They meet the use test; and
- During the two-year period ending on the date of the sale, they did not exclude gain from the sale of another home.

2. $500,000 Exclusion

Taxpayers can exclude the entire gain on the sale of their main home up to $500,000 if all of the following are true:

- They are married and file a joint return for the year;
- Either the owner or their spouse meets the ownership test;
- Both the owner and their spouse meet the use test; and
- During the two-year period ending on the date of the sale, neither the owner nor their spouse excluded gain from the sale of another home.

B. OWNERSHIP AND USE TESTS

To claim the exclusion, an individual must meet the ownership and use tests. This means that during the five-year period ending on the date of the sale, the individual must have owned the home for at least two years (the ownership test), and lived in the home as his or her main home for at least two years (the use test).

1. Exception

If an individual owned and lived in the property as his or her main home for less than two years, he or she can still claim an exclusion in some cases. The maximum amount the individual can claim will be reduced.
Examples

Example 1. Home owned and occupied for at least 2 years.
Amanda bought and moved into her main home in September 2014. She sold the home at a gain in October 2016. During the 5-year period ending on the date of sale in October 2016, she owned and lived in the home for more than 2 years. She meets the ownership and use tests.

Example 2. Met ownership test but not use test.
Dan bought a home, lived in it for 6 months, moved out, and never occupied the home again. He later sold the home for a gain. He owned the home during the entire 5-year period ending on the date of sale. He meets the ownership test but not the use test. He cannot exclude any part of his gain on the sale, unless he qualified for a reduced maximum exclusion.

2. Period of Ownership and Use

The required two years of ownership and use during the five-year period ending on the date of the sale do not have to be continuous, nor do they have to occur at the same time. An individual can meet the tests if he or she can show that he or she owned and lived in the property as his or her main home for either 24 full months or 730 days (365 × 2) during the five-year period ending on the date of sale.

3. Temporary Absence

Short temporary absences for vacations or other seasonal absences, even if the owner rents out the property during the absences, are counted as periods of use.

Example

Professor Paul Beard, who is single, bought and moved into a house on August 19, 2013. He lived in it as his main home continuously until January 5, 2015, when he went abroad for a 1-year sabbatical leave. On February 5, 2016, one month after returning from the leave, he sold the house at a gain. Because his leave was not a short temporary absence, he cannot include the period of leave to meet the 2-year use test. He cannot exclude any part of his gain because he did not use the residence for the required 2 years.

4. Ownership and Use Tests Met at Different Times

Individuals can meet the ownership and use tests during different two-year periods. However, the owner must meet both tests during the five-year period ending on the date of the sale.
Example

Beginning in 2005, Helen Jones lived in a rented apartment. The apartment building was later changed to a condominium, and she bought her apartment on December 2, 2013. In 2014, Helen became ill, and on April 14 of that year she moved to her daughter’s home. On July 7, 2016, while still living in her daughter’s home, she sold her condominium.

Helen can exclude gain on the sale of her condominium because she met the ownership and use tests during the 5-year period from July 8, 2011, to July 7, 2016, the date she sold the condominium. She owned her condominium from December 2, 2013, to July 7, 2016 (more than 2 years). She lived in the property from July 8, 2011 (the beginning of the 5-year period), to April 14, 2014 (more than 2 years).

The time Helen lived in her daughter’s home during the 5-year period can be counted toward her period of ownership, and the time she lived in her rented apartment during the 5-year period can be counted toward her period of use.

5. Cooperative Apartment

If an individual sold stock as a tenant-stockholder in a cooperative housing corporation, the ownership and use tests are met if, during the 5-year period ending on the date of sale, the individual:

- Owned the stock for at least 2 years; and
- Lived in the house or apartment that the stock entitles him or her to occupy as his or her main home for at least 2 years.

6. Exception for Individuals with a Disability

There is an exception to the use test if during the 5-year period before the sale of a home:

- The owner becomes physically or mentally unable to care for himself or herself; and
- He or she owned and lived in the home as his or her main home for a total of at least 1 year during the 5-year period before the sale of the home.

Under this exception, an individual is considered to live in his or her home during any time that he or she owns the home and lives in a facility (including a nursing home) that is licensed by a state or political subdivision to care for persons in his or her condition. If an individual meets this exception to the use test, he or she still has to meet the 2-out-of-5-year ownership test to qualify for the exclusion.
7. **Previous Home Destroyed or Condemned**

For the ownership and use tests, an individual can add the time he or she owned and lived in a previous home that was destroyed or condemned to the time he or she owned and lived in the home on which he or she wishes to exclude gain. This rule applies if any part of the basis of the home the individual sold depended on the basis of the destroyed or condemned home. Otherwise, the individual must have owned and lived in the same home for 2 of the 5 years before the sale to qualify for the exclusion.

8. **Married Persons**

If an individual and his or her spouse file a joint return for the year of sale, he or she can exclude gain if either spouse meets the ownership and use tests.

### Examples

**Example 1.** One spouse sells a home.

Emily sells her home in June 2016 for a gain of $300,000. She marries Jamie later in the year. She meets the ownership and use tests, but Jamie does not. Emily can exclude up to $250,000 of gain on a separate or joint return for 2016. The $500,000 maximum exclusion for certain joint returns does not apply because Jamie does not meet the use test.

**Example 2.** Each spouse sells a home.

The facts are the same as in Example 1 except that Jamie also sells a home in 2016 for a gain of $200,000 before he marries Emily. He meets the ownership and use tests on his home. Emily can exclude $250,000 of gain and Jamie can exclude $200,000 of gain on the respective sales of their individual homes. However, Emily cannot use Jamie’s unused exclusion to exclude more than $250,000 of gain. Therefore, Emily and Jamie must recognize $50,000 of gain on the sale of Emily’s home. The $500,000 maximum exclusion for certain joint returns does not apply because Emily and Jamie do not both meet the use test for the same home.

---

**a. Sale of Main Home by Surviving Spouse**

If an individual’s spouse died and he or she did not remarry before the date of sale, the individual is considered to have owned and lived in the property as his or her main home during any period of time when his or her spouse owned and lived in it as a main home.

**b. Home Transferred From Spouse**

If a home was transferred to an individual by his or her spouse (or former spouse if the transfer was incident to divorce), the individual is considered to have owned it during any period of time when his or her spouse owned it.
c. Use of Home After Divorce

An individual is considered to have used property as his or her main home during any period when he or she owned it and his or her spouse or former spouse is allowed to live in it under a divorce or separation instrument and uses it as his or her main home.

C. REDUCED MAXIMUM EXCLUSION

If an individual fails to meet the requirements to qualify for the $250,000 or $500,000 exclusion, he or she may still qualify for a reduced exclusion. This applies to those who:

- Fail to meet the ownership and use tests, or
- Have used the exclusion within 2 years of selling their current home.

In both cases, to qualify for a reduced exclusion, the sale of the individual’s main home must be due to one of the following reasons:

- A change in place of employment.
- Health.
- Unforeseen circumstances.

1. Unforeseen Circumstances

The sale of a main home is because of an unforeseen circumstance if the owner’s primary reason for the sale is the occurrence of an event that he or she did not anticipate before buying and occupying his or her main home.

VI. BUSINESS USE OR RENTAL OF HOME

Individuals may be able to exclude the gain from the sale of a home that they have used for business or to produce rental income, but the individuals must meet the ownership and use tests.

<table>
<thead>
<tr>
<th>Examples</th>
</tr>
</thead>
</table>

**Example 1.** On May 24, 2010, Amy, who is unmarried for all years in this example, bought a house. She moved in on that date and lived in it until May 31, 2012, when she moved out of the house and put it up for rent. The house was rented from June 1, 2012 to March 31, 2014. Amy claimed depreciation deductions in 2012 through 2014 totaling $10,000. Amy moved back into the house on April 1, 2014, and lived there until she sold it on January 28, 2016. During the 5-year period ending on the date of the sale (January 29, 2011 – January 28, 2016), Amy owned and lived in the house for more than 2 years as shown in the table below.
Examples (continued)

<table>
<thead>
<tr>
<th>Five-Year Period</th>
<th>Used As Home</th>
<th>Used As Rental</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/29/11 – 5/31/12</td>
<td>16 months</td>
<td></td>
</tr>
<tr>
<td>6/1/12 – 3/31/14</td>
<td></td>
<td>22 months</td>
</tr>
<tr>
<td>4/1/14 – 1/28/16</td>
<td>22 months</td>
<td>22 months</td>
</tr>
<tr>
<td></td>
<td>38 months</td>
<td></td>
</tr>
</tbody>
</table>

During the period Amy owned the house (2,076 days), her period of nonqualified use was 669 days. Amy divides 669 by 2,076 and obtains a decimal (rounded to at least three decimal places) of 0.322. To figure her gain attributable to the period of nonqualified use, she multiplies $190,000 (the gain not attributable to the $10,000 depreciation deduction) by 0.322. Because the gain attributable to periods of nonqualified use is $61,180, Amy can exclude $128,820 of her gain.

Example 2. William owned and used a house as his main home from 2010 through 2013. On January 1, 2014, he moved to another state. He rented his house from that date until April 29, 2016, when he sold it. During the 5-year period ending on the date of sale (April 30, 2011 – April 29, 2016), William owned and lived in the house for more than 2 years. He must report the sale on Form 4797 because it was rental property at the time of sale. Because the period of nonqualified use does not include any part of the 5-year period after the last date William lived in the house, he has no period of nonqualified use. Because he met the ownership and use tests, he can exclude gain up to $250,000. However, he cannot exclude the part of the gain equal to the depreciation he claimed or could have claimed for renting the house.

VII. SPECIAL SITUATIONS

The following situations may affect an individual’s exclusion.

A. EXPATRIATES

An individual cannot claim the exclusion if the expatriation tax applies to them. The expatriation tax applies to certain U.S. citizens who have renounced their citizenship (and long-term residents who have ended their residency).

B. HOME DESTROYED OR CONDEMNED

If an individual’s home was destroyed or condemned, any gain (for example, because of insurance proceeds he or she received) qualifies for the exclusion. Any part of the gain that cannot be excluded (because it is more than the maximum exclusion) may be postponed.
C. SALE OF REMAINDER INTEREST

Individuals can exclude gain from the sale of a remainder interest in their home. If an individual makes this choice, he or she cannot choose to exclude gain from the sale of any other interest in the home that he or she sells separately.

However, individuals cannot exclude gain from the sale of a remainder interest in their home to a related person. Related persons include brothers and sisters, half-brothers and half-sisters, spouse, ancestors (parents, grandparents, etc.), and lineal descendants (children, grandchildren, etc.). Related persons also include certain corporations, partnerships, trusts, and exempt organizations.

VIII. RECAPTURING A FEDERAL MORTGAGE SUBSIDY

If an individual financed his or her home under a federally subsidized program (loans from tax-exempt qualified mortgage bonds or loans with mortgage credit certificates), the individual may have to recapture (pay back) all or part of the benefit he or she received from that program when he or she sells or otherwise disposes of his or her home. An individual recaptures the benefit by increasing his or her federal income tax for the year of the sale. The recapture applies to loans that came from the proceeds of qualified mortgage bonds or were based on mortgage credit certificates. The recapture rule also applies to assumptions of these loans.

The recapture of the federal mortgage subsidy applies only if an individual meets both of the following conditions:

- The individual sells or otherwise disposes of his or her home at a gain and during the first 9 years after the date he or she closed his or her mortgage loan; and
- The individual's income for the year of disposition is more than that year's adjusted qualifying income for his or her family size for that year (related to the income requirements a person must meet to qualify for the federally subsidized program).

The recapture does not apply if the mortgage loan was a qualified home improvement loan of not more than $15,000 used for alterations, repairs, and improvements that protect or improve the basic livability or energy efficiency of his or her home, the home is disposed of as a result of the owner’s death, the individual disposes of the home more than 9 years after the date they closed his or her mortgage loan, the individual transfers the home to his or her spouse, or to his or her former spouse incident to a divorce, where no gain is included in his or her income, the individual disposes of a home at a loss, the home is destroyed by a casualty, and the owner repairs it or replaces it on its original site within 2 years after the end of the tax year when the destruction happened, or the owner refinances his or her mortgage loan.
**CHAPTER 5: TEST YOUR KNOWLEDGE**

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

<table>
<thead>
<tr>
<th></th>
<th><strong>1.</strong> Which of the following requirements must a taxpayer meet in order to be able to exclude the gain on the sale of a home:</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>the taxpayer must have lived in the property for at least 18 months immediately prior to the sale</td>
</tr>
<tr>
<td>B</td>
<td>the taxpayer must have lived in the home for at least two years immediately prior to the sale</td>
</tr>
<tr>
<td>C</td>
<td>the taxpayer must have lived in the home for two out of the five years immediately prior to the time of the sale</td>

Many individuals buy second homes either for their own use and enjoyment or to rent and produce income as part of their financial plan. Even if an individual chooses to use a second home solely for his or her own use and not as a rental, there are important tax implications to understand. This chapter discusses rental income and expenses. It covers topics including rental income, rental expenses, personal use of a dwelling unit, including vacation homes, depreciation and limits on rental loss.

I. RENTAL INCOME AND EXPENSES

A. RENTAL INCOME

Taxpayers must generally include in their gross income all amounts received as rent. Rental income is any payment the owner receives for the use or occupation of property. In addition to amounts received as normal rent payments, there are other amounts that may be rental income.

1. Time for Reporting

For cash basis taxpayers, rental income should be reported on the return for the year the owner actually or constructively received it, regardless of when it was earned. Income is constructively received when it is made available to the recipient, i.e., when it is credited to the owner’s bank account. For an accrual basis taxpayer, rental income should be reported when earned, rather than when received. Expenses can generally be deducted when incurred, rather than when paid.

2. Types of Income

a. Advance Rent

Advance rent is any amount received by the owner before the period that it covers. Owners should include advance rent in their rental income in the year it was received, regardless of the period covered or the method of accounting they use.
Example

Steve signs a 10-year lease to rent his property. In the first year, he receives $5,000 for the first year’s rent and $5,000 as rent for the last year of the lease. Steve must include $10,000 in his income in the first year.

b. Security Deposits

Owners should not include a security deposit in their income when they receive it if they intend to return it to the tenant at the end of the lease. But if the owner keeps part or all of the security deposit during any year because the tenant does not live up to the terms of the lease, the amount the owner keeps should be included as income for that year. If an amount called a “security deposit” is to be used as a final payment of rent, it is advance rent and should be included as income when it is received.

c. Payment for Canceling a Lease

If a tenant pays an owner to cancel a lease, the amount received is rent. It should be included as income in the year received regardless of the owner’s method of accounting.

d. Expenses Paid by Tenant

If a tenant pays any of the owner’s expenses, the payments are rental income. They can be deducted to the extent they meet the requirements of deductible rental expense.

e. Property or Services

If an owner receives property or services instead of money as rent, the fair market value of the property or services received should be included as rental income. If the services are provided at an agreed upon or specified price, that price is the fair market value unless there is evidence to the contrary.

f. Rental of Property Also Used as a Home

If an owner rents property that he or she also uses as his or her home and he or she rents it fewer than 15 days during the tax year, they do not need to include the rent received as income and likewise may not deduct rental expenses.

B. RENTAL EXPENSES

This section discusses repairs and certain other expenses of renting property that an owner can ordinarily deduct from his or her rental income. Such expenses can normally be deducted in the year they are paid.

1. Types of Expenses

a. Vacant Rental Property

If an individual holds property for rental purposes, he or she may be able to deduct his or her ordinary and necessary expenses (including depreciation) for managing, conserving, or maintaining the property
while the property is vacant. However, the individual cannot deduct any loss of rental income for the period the property is vacant.

b. Pre-Rental Expenses

Owners can deduct their ordinary and necessary expenses for managing, conserving, or maintaining rental property from the time they make it available for rent.

c. Depreciation

Owners can begin to depreciate rental property when it is ready and available for rent.

d. Expenses for Rental Property Sold

If an individual sells property that he or she held for rental purposes, the individual can deduct the ordinary and necessary expenses for managing, conserving, or maintaining the property until it is sold. If the property is not held out as available for rent while listed for sale, the expenses are not deductible rental expenses.

2. Personal Use of Rental Property

If an owner sometimes uses his or her rental property for personal purposes, the owner must divide his or her expenses between rental and personal use. Also, the rental expense deductions may be limited.

C. REPAIRS AND IMPROVEMENTS

 Owners can deduct the cost of repairs to his or her rental property. On the other hand, the cost of improvements is not deductible. The cost of improvements is recovered through depreciation, discussed later. An individual who owns rental property must therefore separate the cost of repairs and improvements and keep accurate records showing which is which.

1. Repairs

A repair is something that keeps the property in good operating condition. It does not materially add to the value of the property or substantially prolong its life. Repainting property inside or out, fixing gutters or floors, fixing leaks, plastering, and replacing broken windows are examples of repairs. If an owner makes repairs as part of an extensive remodeling or restoration of the property, the whole job is an improvement.

2. Improvements

An improvement adds to the value of the property, prolongs its useful life, or adapts it to new uses. Improvements include the following items:

• Putting a recreation room in an unfinished basement;
• Paneling a den;
• Adding a bathroom or bedroom;
• Putting decorative grillwork on a balcony;
• Putting up a fence;
• Putting in new plumbing or wiring;
• Putting in new cabinets;
• Putting on a new roof; or
• Paving a driveway.

The cost of the improvement must be capitalized. The capitalized cost can generally be depreciated as if the improvement were separate property.

**Note: Safe Harbor Election for Small Taxpayers**

You are not required to capitalize as an improvement, and therefore may deduct, the costs of work performed on owned or leased buildings, e.g., repairs, maintenance, improvements or similar costs, that fall into the safe harbor election for small taxpayers. The requirements of the safe harbor election for small taxpayers are:

- Average annual gross receipts less than $10 million; and
- Owns or leases building property with an unadjusted basis of less than $1 million; and
- The total amount paid during the taxable year for repairs, maintenance, improvements, or similar activities performed on such building property doesn’t exceed the lesser of:
  - Two percent of the unadjusted basis of the eligible building property; or
  - $10,000; and
- You make the election to use the safe harbor for each taxable year in which qualifying amounts are incurred.
  - The election is made by attaching a statement to your income tax return for the taxable year.

3. **Other Expenses**

Other expenses an owner can deduct from rental income include advertising, cleaning and maintenance services, utilities, fire and liability insurance, taxes, interest, commissions for the collection of rent, ordinary and necessary travel and transportation. For example, an owner can deduct the cost of traveling away from home if the primary purpose is to collect rental income or manage or maintain rental property.
D. PROPERTY CHANGED TO RENTAL USE

If an owner changes his or her home or other property (or a part of it) to rental use at any time other than at the beginning of his or her tax year, the owner must divide yearly expenses, such as taxes and insurance, between rental use and personal use. The owner can deduct as rental expenses only the part of the expense that is for the part of the year the property was used or held for rental purposes. Property should be treated as having been placed in service on the conversion date for purposes of depreciation.

An owner cannot deduct depreciation or insurance for the part of the year the property was held for personal use. However, the owner can include the home mortgage interest and real estate tax expenses for the part of the year the property was held for personal use as an itemized deduction on Schedule A (Form 1040).

Example

Robert’s tax year is the calendar year. He moved from his home in May and started renting it on June 1. Robert can deduct as rental expenses seven-twelfths of his yearly expenses, such as taxes and insurance. Starting with June, he can deduct as rental expenses the amounts he pays for items generally billed monthly, such as utilities.

E. RENTING PART OF PROPERTY

If an owner rents part of his or her property, the owner must divide certain expenses between the part of the property used for rental purposes and the part of the property used for personal purposes as though he or she actually had two separate pieces of property.

The owner can deduct the expenses related to the part of the property used for rental purposes, such as home mortgage interest and real estate taxes, as rental expenses on Schedule E (Form 1040). The owner can deduct the expenses for the part of the property used for personal purposes, subject to certain limitations, only if he or she itemizes his or her deductions on Schedule A (Form 1040). The owner can also deduct as a rental expense a part of other expenses that normally are nondeductible personal expenses, such as expenses for electricity or painting the outside of the house. The owner cannot deduct any part of the cost of the first phone line even if his or her tenants have unlimited use of it.

An owner does not have to divide the expenses that belong only to the rental part of his or her property. For example, if an owner paints a room that he or she rents, or if he or she pays premiums for liability insurance in connection with renting a room in his or her home, the entire cost is a rental expense. If an owner installs a second phone line strictly for his or her tenants’ use, all of the cost of the second line is deductible as a rental expense.

If an expense is for both rental use and personal use, such as mortgage interest or heat for the entire house, the owner must divide the expense between the rental use and the personal use. The owner can use any reasonable method for dividing the expense. It may be reasonable to divide the cost of some
items (for example, water) based on the number of people using them. However, the two most common methods for dividing an expense are one based on the number of rooms in the home and one based on the square footage of the home.

II. PERSONAL USE OF A DWELLING (VACATION HOMES)

If an individual has any personal use of a dwelling unit (including vacation home) that he or she rents, the individual must divide his or her expenses between rental use and personal use.

If the owner used his or her dwelling unit for personal purposes long enough during the tax year, it will be considered a dwelling unit used as a home. If so, the owner cannot deduct rental expenses that exceed rental income for that property. If the dwelling unit is not considered a dwelling unit used as a home, the owner can deduct rental expenses that exceed rental income for that property subject to certain limits.

If an owner uses the dwelling unit as a home and rents it fewer than 15 days during the year, the owner does not include any of the rent in his or her income and does not deduct any of the rental expenses.

A. DWELLING UNIT

A dwelling unit includes a house, apartment, condominium, mobile home, boat, vacation home, or similar property. A dwelling unit has basic living accommodations, such as sleeping space, a toilet, and cooking facilities.

A dwelling unit does not include property used solely as a hotel, motel, inn, or similar establishment. Property is used solely as a hotel, motel, inn, or similar establishment if it is regularly available for occupancy by paying customers and is not used by an owner as a home during the year.

Example

Linda rents a room in her home that is always available for short-term occupancy by paying customers. She does not use the room herself, and she allows only paying customers to use the room. The room is used solely as a hotel, motel, inn, or similar establishment and is not a dwelling unit.

B. DWELLING UNIT USED AS A HOME

The tax treatment of rental income and expenses for a dwelling unit that the owner also uses for personal purposes depends on whether the owner uses it as a home. An owner is considered to use a dwelling unit as a home during the tax year if he or she uses it for personal purposes more than the greater of:

- 14 days; or
- 10% of the total days it is rented to others at a fair rental price.

If a dwelling unit is used for personal purposes on a day it is rented at a fair rental price, the owner cannot count that day as a day of rental in determining if he or she has used it for 10 percent of the total
days. Instead, the owner should count it as a day of personal use in applying both of the above. This rule does not apply when dividing expenses between rental and personal use.

A fair rental price for your property generally is an amount that a person who is not related to you would be willing to pay. The rent you charge is not a fair rental price if it is substantially less than the rents charged for other properties that are similar to your property. The following examples show how to determine whether an owner used their rental property as a home.

### Examples

**Example 1.** Joe converted the basement of his home into an apartment with a bedroom, a bathroom, and a small kitchen. He rented the basement apartment at a fair rental price to college students during the regular school year. Joe rented to them on a 9-month lease (273 days). During June (30 days), Joe’s brother stayed with him and lived in the basement apartment rent free. The basement apartment was used as a home because Joe used it for personal purposes for 30 days. Rent-free use by his brother is considered personal use. Joe’s personal use (30 days) is more than the greater of 14 days or 10% of the total days it was rented (27 days).

**Example 2.** Carol rented the guest bedroom in her home at a fair rental price during the local college’s homecoming, commencement, and football weekends (a total of 27 days). Her sister-in-law stayed in the room, rent free, for the last 3 weeks (21 days) in July. The room was used as a home because Carol used it for personal purposes for 21 days. That is more than the greater of 14 days or 10% of the 27 days it was rented (3 days).

**Example 3.** Rebecca owns a cottage in a resort area. She rented it at a fair rental price for a total of 170 days during the year. For 12 of those days, the tenant was not able to use the cottage and allowed Rebecca to use it even though she did not refund any of the rent. Her family actually used the cottage for 10 of those days. Therefore, the cottage is treated as having been rented for 160 (170 - 10) days. Rebecca’s family also used the cottage for 7 other days during the year. Rebecca used the cottage as a home because she used it for personal purposes for 17 days. That is more than the greater of 14 days or 10% of the 160 days it was rented (16 days).

### C. USE AS A MAIN HOME BEFORE OR AFTER RENTING

For purposes of determining whether a dwelling unit was used as a home, owners do not count as days of personal use the days they used the property as their main home before or after renting it or offering it for rent in either of the following circumstances:

- They rented or tried to rent the property for 12 or more consecutive months; or
- They rented or tried to rent the property for a period of less than 12 consecutive months and the period ended because they sold or exchanged the property.
This special rule does not apply when dividing expenses between rental and personal use.

D. FIGURING DAYS OF PERSONAL USE

A day of personal use of a dwelling unit is any day that it is used by any of the following persons:

- The owner or any other person who has an interest in it, unless the owner rents it to another owner as his or her main home under a shared equity financing agreement;
- A member of the owner’s family or a member of the family of any other person who has a financial interest in it, unless the family member uses the dwelling unit as his or her main home and pays a fair rental price. Family includes only brothers and sisters, half-brothers and half-sisters, spouses, ancestors (parents, grandparents, etc.) and lineal descendants (children, grandchildren, etc.);
- Anyone under an arrangement that lets the owner use some other dwelling unit; or
- Anyone at less than a fair rental price.

If the other person or member of the family has more than one home, his or her main home is ordinarily the one lived in most of the time.

Examples

**Example 1.** Jan and her neighbor are co-owners of a condominium at the beach. Jan rents the unit to vacationers whenever possible. The unit is not used as a main home by anyone. Jan’s neighbor uses the unit for two weeks every year. Because her neighbor has an interest in the unit, both of them are considered to have used the unit for personal purposes during those 2 weeks.

**Example 2.** Rick and his neighbors are co-owners of a house under a shared equity financing agreement. Rick’s neighbors live in the house and pay him a fair rental price. Even though the neighbors have an interest in the house, the days his neighbors live there are not counted as days of personal use by Rick. This is because his neighbors rent the house as their main home under a shared equity financing agreement.

**Example 3.** Lisa owns a rental property that she rents to her son. Her son has no interest in this dwelling unit. He uses it as his main home. He pays a fair rental price for the property. The son’s use of the property is not personal use by Lisa because her son is using it as his main home, he has no interest in the property, and he is paying a fair rental price.

E. DONATION OF USE OF PROPERTY

An owner uses a dwelling unit for personal purposes if:

- The owner donates the use of the unit to a charitable organization; and
The organization sells the use of the unit at a fundraising event; and

The “purchaser” uses the unit.

III. DEPRECIATION

Owners recover their cost in income producing property through yearly tax deductions. This is done by depreciating the property; that is, by deducting some of the cost on each year’s tax return. Three basic factors determine how much depreciation an owner can deduct. They are:

- The owner’s basis in the property;
- The recovery period for the property; and
- The depreciation method used.

An owner cannot simply deduct his or her mortgage or principal payments, or the cost of furniture, fixtures and equipment, as an expense. The owner can deduct depreciation only on the part of their property used for rental purposes. Depreciation reduces the owner’s basis for figuring gain or loss on a later sale or exchange.

Note also that an owner can never depreciate the cost of land because land does not wear out, become obsolete, or get used up. The costs of clearing, grading, planting, and landscaping are usually all part of the cost of land and are not depreciable.

A. CLAIMING THE CORRECT AMOUNT OF DEPRECIATION

Owners should claim the correct amount of depreciation each tax year. Even if an owner did not claim depreciation that he or she was entitled to deduct, the owner must still reduce his or her basis in the property by the full amount of depreciation that he or she could have deducted.

If an owner claimed less depreciation than allowable in an earlier year, he or she can change his or her accounting method to take a deduction in the current year for the unclaimed depreciation. To change an accounting method, a taxpayer must have the consent of the IRS. In some instances, automatic consent is available.

B. DEPRECIATION METHODS

There are three ways to figure depreciation. The depreciation method a taxpayer uses depends on the type of property and when the property was placed in service. For property used in rental activities, an owner will use one of the following:

- MACRS (Modified Accelerated Cost Recovery System) for property placed in service after 1986;
- ACRS (Accelerated Cost Recovery System) for property placed in service after 1980 but before 1987; or
• Useful lives and either straight line or an accelerated method of depreciation, such as the declining balance method, if placed in service before 1981.

Also, remember that an owner’s total of all his or her yearly depreciation deductions cannot be more than the cost or other basis of the property. For this purpose, an individual’s yearly depreciation deductions include any depreciation that he or she was allowed to claim, even if it was not actually claimed.

C. MACRS

Most business and investment property placed in service after 1986 is depreciated using MACRS. MACRS consists of two systems that determine how an owner depreciates their property – the General Depreciation System (GDS) and the Alternative Depreciation System (ADS). GDS is used to figure depreciation deduction for property used in most rental activities, unless the owner elects the ADS.

To figure their MACRS deduction, the owner needs to know the following information about his or her property:

• Its recovery period;
• Its placed-in-service date; and
• Its depreciable basis.

1. Recovery Periods Under GDS

Each item of property that can be depreciated is assigned to a property class. The recovery period of the property depends on the class the property is in. Under GDS, the recovery period of an asset is generally the same as its property class. The property classes under GDS are:

• 3-year property;
• 5-year property;
• 7-year property;
• 10-year property;
• 15-year property;
• 20-year property;
• Nonresidential real property; and
• Residential rental property.

Recovery periods for property used in rental activities are shown in Table 6-1, later. The class to which property is assigned is determined by its class life.

2. Additions or Improvements to Property

Property owners should treat depreciable additions or improvements they make to any property as
separate property items for depreciation purposes. The recovery period for an addition or improvement to property begins on the later of:

- The date the addition or improvement is placed in service; or
- The date the property to which the addition or improvement was made is placed in service.

The class and recovery period of the addition or improvement is the one that would apply to the original property if it were placed in service at the same time as the addition or improvement.

**Example**

Cal owns a residential rental house that he has been renting since 1986 and is depreciating under ACRS. Cal puts an addition onto the house and he placed it in service in 2014. He must use MACRS for the addition. Under GDS, the addition would be depreciated as residential rental property over 27.5 years.

3. **Placed-in-Service Date**

An owner can begin to depreciate property when he or she places it in service in his or her trade or business or for the production of income. Property is considered placed in service in a rental activity when it is ready and available for a specific use in that activity.

4. **Depreciable Basis**

To deduct the proper amount of depreciation each year, an owner must first determine his or her basis in the property he or she intends to depreciate. The basis used for figuring depreciation is the owner's original basis in the property increased by any additions or improvements made to the property. The original basis is usually the property's cost. However, if an individual acquired the property in some other way, such as by inheriting it, getting it as a gift, or building it, the individual may have to figure his or her original basis in another way. Other adjustments could also affect basis.

5. **Conventions**

Under MACRS, conventions establish when the recovery period begins and ends. The convention an owner uses determines the number of months for which he or she can claim depreciation in the year he or she places property in service and in the year he or she disposes of the property.

a. **Mid-month Convention**

A mid-month convention is used for all residential rental property and nonresidential real property. Under this convention, an owner treats all property placed in service, or disposed of, during any month as placed in service, or disposed of, at the midpoint of that month.

b. **Mid-quarter Convention**

A mid-quarter convention must be used if the mid-month convention does not apply and the total depreciable basis of MACRS property placed in service in the last 3 months of a tax year (excluding
nonresidential real property, residential rental property, and property placed in service and disposed of in the same year) is more than 40% of the total basis of all such property the owner placed in service during the tax year.

c. Half-year Convention

The half-year convention is used if neither the mid-quarter convention nor the mid-month convention applies. Under this convention, an owner treats all property placed in service, or disposed of, during a tax year as placed in service, or disposed of, at the midpoint of that tax year. If this convention applies, the owner deducts a half-year of depreciation for the first year and the last year that he or she depreciates the property. The owner deducts a full year of depreciation for any other year during the recovery period.

</tbody>
</table>

The recovery period of the property to which the addition or improvement is made, determined as if the property were placed in service at the same time as the addition or improvement.
Example

During the tax year, Jordan Gregory purchased the following items to use in his rental property.

- A dishwasher for $400 that he placed in service in January.
- Used furniture for $100 that he placed in service in September.
- A refrigerator for $800 that he placed in service in October.

Jordan uses the calendar year as his tax year. The total basis of all property placed in service in that year is $1,300. The $800 basis of the refrigerator placed in service during the last 3 months of his tax year exceeds $520 (40% × $1,300). Jordan must use the mid-quarter convention instead of the half-year convention for all three items.

### Examples

**Example 1.** Bernie purchased a stove and refrigerator and placed them in service in June. His basis in the stove is $300 and his basis in the refrigerator is $500. Both are 5-year property. Using the half-year convention column in Table 6-2–A, Bernie finds the depreciation percentage for year 1 is 20%. For that year, his depreciation deduction is $60 ($300 × .20) for the stove and $100 ($500 × .20) for the refrigerator. For year 2, Bernie finds his depreciation percentage is 32%. That year’s depreciation deduction will be $96 ($300 × .32) for the stove and $160 ($500 × .32) for the refrigerator.

**Example 2.** Assume the same facts as in Example 1, except Bernie buys the refrigerator in October instead of June. He must use the mid-quarter convention to figure depreciation on the stove and refrigerator. The refrigerator was placed in service in the last 3 months of the tax year and its basis ($500) is more than 40% of the total basis of all property placed in service during the year ($800 × .40 = $320). Because Bernie placed the refrigerator in service in October, he uses the fourth quarter column of Table 6-2–A and finds that the depreciation percentage for year 1 is 5%. His depreciation deduction for the refrigerator is $25 ($500 × .05). Because he placed the stove in service in June, he uses the second quarter column of Table 6-2–A and finds that the depreciation percentage for year 1 is 25%. For that year, his depreciation deduction for the stove is $75 ($300 × .25).
D. OTHER RULES ABOUT DEPRECIABLE PROPERTY

In addition to the rules about what methods an owner can use, there are other rules individuals should be aware of with respect to depreciable property.

1. Gain from Disposition

If an individual disposes of depreciable property at a gain, he or she may have to report, as ordinary income, all or part of the gain.

2. Limits on Rental Losses

Rental real estate activities are generally considered passive activities, and the amount of loss an individual can deduct is limited. Generally, an individual cannot deduct losses from rental real estate activities unless he or she has income from other passive activities. However, an individual may be able to deduct rental losses without regard to whether he or she has income from other passive activities if he or she “materially” or “actively” participated in the rental activity. This topic is discussed in more detail in Chapter 3.

Losses from passive activities are first subject to the at-risk rules. At-risk rules limit the amount of deductible losses from holding most real property placed in service after 1986. Likewise, this subject is discussed in more detail in Chapter 3.
### CHAPTER 6: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

<table>
<thead>
<tr>

</table>
4. The depreciation amount that a property owner can deduct on his or her tax return is determined by all of the following factors except:

A. the owner’s basis in the property
B. the amount financed by the seller
C. the recovery period for the property
D. the depreciation method used
CHAPTER 6: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

| 1. | A. Incorrect. Deposits are generally not considered income, but it depends on other factors including the intent of the landlord.  
B. Incorrect. In some cases deposits are considered income, but there is no such categorical rule. Indeed, the presumption seems not to treat deposits as income.  
C. **CORRECT**. To the extent the landlord intends to refund the deposit at the end of the leasehold, it is not income.  
D. Incorrect. Deposits are either income or not; there is no such percentage.  
*(See page 108 of the course material.)* |
|---|---|
| 2. | A. **CORRECT**. Any money spent on actual repairs to rental property is deductible as a business expense associated with that rental. A repair is something needed to keep up the property, i.e., patching a leaking roof or fixing a fallen fence.  
B. Incorrect. Improvements, things which add value to the property, are generally not deductible as the owner is able to recoup such investments through depreciation.  
C. Incorrect. Repairs, not improvements, are subject to a deduction while improvements must be depreciated.  
D. Incorrect. There is no such minimum expenditure. The question is whether the item is a repair, which is deductible, or an improvement which must be depreciated.  
*(See page 109 of the course material.)* |
| 3. | A. Incorrect. The owner must use it for 14 days for it to be considered as a personal use dwelling, in which case certain costs must be allocated for tax purposes.  
B. Incorrect. An owner who uses a dwelling for at least 14 days will be considered to have had some personal use for tax purposes. However, this is not the most correct answer.  
C. Incorrect. Under this circumstance, the dwelling will be considered to have had personal use for tax purposes. However, this is not the correct answer.  
D. **CORRECT**. Under either scenario, a taxpayer will be deemed to have used the property for personal use. If a dwelling unit is used for personal purposes on a day it is rented at a fair rental price, the owner cannot count that day as a day of rental in determining if he or she has used it for 10 percent of the total days. Instead, the owner should count it as a day of personal use in applying both of the above. This rule does not apply when dividing expenses between rental and personal use.  
*(See page 112 of the course material.)* |
4.  

**A. Incorrect.** The owner’s basis in an investment property is one of the numerical factors needed to calculate an appropriate depreciation amount.

**B. CORRECT.** Amounts financed, if any, by a property’s seller has no bearing on the amount of depreciation that the new buyer will calculate and use.

**C. Incorrect.** The recovery period for a specific type of property is one of the numerical factors needed to calculate a deductible depreciation amount.

**D. Incorrect.** The depreciation method selected will affect the specific amount of an investor’s depreciation deduction.

*(See page 115 of the course material.)*
For most Americans, the most common type of equity investment is the mutual fund. Whether it is through a 401(K), a pension plan or a direct investment outside the scope of a retirement plan, mutual funds remain a very popular form of investment. Given the widespread popularity of mutual funds, this chapter provides a look at these investment vehicles and the rules that govern the taxation of their distributions. As with other investment vehicles, income tax treatment is a key factor in determining whether it is an appropriate investment.

I. AN OVERVIEW OF MUTUAL FUNDS

American investors increasingly have turned to mutual funds to save for retirement and other financial goals. Mutual funds can offer the advantages of diversification and professional management. But, as with other investment choices, investing in mutual funds involves risk. Also, fees and taxes will diminish a fund's returns.

A. WHAT ARE THEY

A mutual fund is a company that pools money from many investors and invests the money in stocks, bonds, and short-term debt. The combined holdings the mutual fund owns are known as its portfolio. Each share represents an investor's proportionate ownership of the fund's holdings and the income those holdings generate. Legally known as an “open-end company,” a mutual fund is one type of investment company.

B. MUTUAL FUNDS

Some of the traditional, distinguishing characteristics of mutual funds include the following:

- Investors purchase mutual fund shares from the fund itself (or through a broker for the fund) instead of from other investors on a secondary market, such as the New York Stock Exchange or Nasdaq Stock Market;

- The price that investors pay for mutual fund shares is the fund's per share net asset value (NAV) plus any shareholder fees that the fund imposes at the time of purchase (such as sales loads);

- Mutual fund shares are “redeemable,” meaning investors can sell their shares back to the fund (or to a broker acting for the fund);
• Mutual funds generally create and sell new shares to accommodate new investors. In other words, they sell their shares on a continuous basis, although some funds stop selling when, for example, they become too large; and

• The investment portfolios of mutual funds typically are managed by separate entities known as “investment advisers” that are registered with the SEC.

C. OTHER TYPES OF INVESTMENT COMPANIES

The other basic types of investment companies are described below.

1. Closed-End Funds

Unlike mutual funds, this fund sells a fixed number of shares at one time (in an initial public offering) that later trade on a secondary market.

2. Unit Investment Trusts (UITs)

These make a one-time public offering of only a specific, fixed number of redeemable securities called “units” and which will terminate and dissolve on a date specified at the creation of the UIT.

3. Exchange-Traded Funds (ETFs)

These are a type of investment company that aims to achieve the same return as a particular market index. They can be either open-end companies or UITs. But ETFs are not considered to be, and are not permitted to call themselves, mutual funds.

D. HEDGE FUNDS

“Hedge fund” is a general, non-legal term used to describe private, unregistered investment pools that traditionally have been limited to sophisticated, wealthy investors. Hedge funds are not mutual funds and, as such, are not subject to the numerous regulations that apply to mutual funds for the protection of investors – including regulations requiring a certain degree of liquidity, regulations requiring that mutual fund shares be redeemable at any time, regulations protecting against conflicts of interest, regulations to assure fairness in the pricing of fund shares, disclosure regulations, regulations limiting the use of leverage, and more.

“Funds of hedge funds” are investment companies that invest in hedge funds. Some, but not all, register with the SEC and file semi-annual reports. They often have lower minimum investment thresholds than traditional, unregistered hedge funds and can sell their shares to a larger number of investors. Like hedge funds, funds of hedge funds are not mutual funds. Unlike open-end mutual funds, funds of hedge funds offer very limited rights of redemption. And, unlike ETFs, their shares are not typically listed on an exchange.

E. DERIVATIVES

Derivatives are financial instruments whose performance is derived, at least in part, from the performance
of an underlying asset, security, or index. Even small market movements can dramatically affect their value, sometimes in unpredictable ways.

There are many types of derivatives with many different uses. A fund’s prospectus will disclose whether and how it may use derivatives. Investors may also want to call a fund and ask how it uses these instruments.

F. INDEX FUNDS

“Index fund” describes a type of mutual fund or Unit Investment Trust (UIT) whose investment objective typically is to achieve the same return as a particular market index, such as the S&P 500 Composite Stock Price Index, the Russell 2000 Index, or the Wilshire 5000 Total Market Index.

An index fund will attempt to achieve its investment objective primarily by investing in the securities (stocks or bonds) of companies that are included in a selected index. Some index funds may also use derivatives (such as options or futures) to help achieve their investment objective. Some index funds invest in all of the companies included in an index; other index funds invest in a representative sample of the companies included in an index.

The management of index funds is more “passive” than the management of non-index funds, because an index fund manager only needs to track a relatively fixed index of securities. This usually translates into less trading of the fund’s portfolio, more favorable income tax consequences (lower realized capital gains), and lower fees and expenses than more actively managed funds.

Because the investment objectives, policies, and strategies of an index fund require it to purchase primarily the securities contained in an index, the fund will be subject to the same general risks as the securities that are contained in the index. Those general risks are discussed in the descriptions of stock funds and bond funds. In addition, because an index fund tracks the securities on a particular index, it may have less flexibility than a non-index fund to react to price declines in the securities contained in the index.

Another type of investment company that attempts to track the performance of a market index is an exchange-traded fund (ETF). ETFs are legally classified as either UITs or open-end companies, but they differ from traditional UITs and open-end companies in a number of respects. For example, pursuant to SEC exemptive orders, shares issued by ETFs trade on a secondary market and are only redeemable in very large blocks (blocks of 50,000 shares, for example). ETFs are not considered to be, and may not call themselves, mutual funds.

G. ADVANTAGES AND DISADVANTAGES

Every investment has advantages and disadvantages. But it is important to remember that features that matter to one client may not be important to another. Whether any particular feature is an advantage for a particular client will depend on his or her unique circumstances. For some investors, mutual funds provide an attractive investment choice because they generally offer the following features.
1. **Professional Management**

Professional money managers research, select, and monitor the performance of the securities the fund purchases.

2. **Diversification**

Diversification is an investing strategy that can be neatly summed up as “Don’t put all your eggs in one basket.” Spreading investments across a wide range of companies and industry sectors can help lower the risk if a company or sector fails. Some investors find it easier to achieve diversification through ownership of mutual funds rather than through ownership of individual stocks or bonds.

3. **Affordability**

Some mutual funds accommodate investors who do not have a lot of money to invest by setting relatively low dollar amounts for initial purchases, subsequent monthly purchases, or both.

4. **Liquidity**

Mutual fund investors can readily redeem their shares at the current NAV – plus any fees and charges assessed on redemption – at any time.

But mutual funds also have features that some investors might view as disadvantages, such as:

- Investors must pay sales charges, annual fees, and other expenses (discussed below) regardless of how the fund performs. And, depending on the timing of their investment, investors may also have to pay taxes on any capital gains distribution they receive – even if the fund went on to perform poorly after they bought shares;

- Investors typically cannot ascertain the exact make-up of a fund’s portfolio at any given time, nor can they directly influence which securities the fund manager buys and sells or the timing of those trades; and

- With an individual stock, investors can obtain real-time (or close to real-time) pricing information with relative ease by checking financial websites or by calling their broker. Investors can also monitor how a stock’s price changes from hour to hour – or even second to second. By contrast, with a mutual fund, the price at which an investor purchases or redeems shares will typically depend on the fund’s NAV, which the fund might not calculate until many hours after the investor has placed his or her order. In general, mutual funds must calculate their NAV at least once every business day, typically after the major U.S. exchanges close.

**H. HOW MUTUAL FUNDS EARN MONEY FOR THEIR INVESTORS**

Individuals can earn money from their investment in three ways:

1. **Dividend Payments**

A fund may earn income in the form of dividends and interest on the securities in its portfolio. The fund
then pays its shareholders nearly all of the income (minus disclosed expenses) it has earned in the form of dividends.

2. Capital Gains Distributions

The price of the securities a fund owns may increase. When a fund sells a security that has increased in price, the fund has a capital gain. At the end of the year, most funds distribute these capital gains (minus any capital losses) to investors.

3. Increased NAV

If the market value of a fund’s portfolio increases after deduction of expenses and liabilities, then the value (NAV) of the fund and its shares increases. The higher NAV reflects the higher value of the investment.

With respect to dividend payments and capital gains distributions, funds usually will give investors a choice: the fund can send them a check or other form of payment, or they can have their dividends or distributions reinvested in the fund to buy more shares (often without paying an additional sales load).

When it comes to investing in mutual funds, investors have literally thousands of choices. Before advising a client to invest in any given fund, decide whether the investment strategy and risks of the fund are a good fit. The first step to successful investing is figuring out your client’s financial goals and risk tolerance.

I. TYPES OF FUNDS

Most mutual funds fall into one of three main categories – money market funds, bond funds (also called “fixed income” funds), and stock funds (also called “equity” funds). Each type has different features and different risks and rewards. Generally, the higher the potential return, the higher the risk of loss.

1. Money Market Funds

Money market funds have relatively low risks, compared to other mutual funds (and most other investments). By law, they can invest in only certain high-quality, short-term investments issued by the U.S. government, U.S. corporations, and state and local governments. Money market funds try to keep their net asset value (NAV) – which represents the value of one share in a fund – at a stable $1.00 per share. But the NAV may fall below $1.00 if the fund’s investments perform poorly. Investor losses have been rare, but they are possible.

Money market funds pay dividends that generally reflect short-term interest rates, and historically the returns for money market funds have been lower than for either bond or stock funds. That is why “inflation risk” – the risk that inflation will outpace and erode investment returns over time – can be a potential concern for investors in money market funds.

2. Bond Funds

Bond funds generally have higher risks than money market funds, largely because they typically pursue
strategies aimed at producing higher yields. Unlike money market funds, the SEC’s rules do not restrict bond funds to high-quality or short-term investments.

Because there are many different types of bonds, bond funds can vary dramatically in their risks and rewards. Some of the risks associated with bond funds include:

- **Credit Risk** – The possibility that companies or other issuers whose bonds are owned by the fund may fail to pay their debts (including the debt owed to holders of their bonds). Credit risk is less of a factor for bond funds that invest in insured bonds or U.S. Treasury bonds. By contrast, those that invest in the bonds of companies with poor credit ratings generally will be subject to higher risk;

- **Interest Rate Risk** – The risk that the market value of the bonds will go down when interest rates go up. Because of this, you can lose money in any bond fund, including those that invest only in insured bonds or Treasury bonds. Funds that invest in longer-term bonds tend to have higher interest rate risk; and

- **Prepayment Risk** – The chance that a bond will be paid off early. For example, if interest rates fall, a bond issuer may decide to pay off (or “retire”) its debt and issue new bonds that pay a lower rate. When this happens, the fund may not be able to reinvest the proceeds in an investment with as high a return or yield.

3. **Stock Funds**

Although a stock fund’s value can rise and fall quickly (and dramatically) over the short term, historically stocks have performed better over the long term than other types of investments – including corporate bonds, government bonds, and treasury securities.

Overall “market risk” poses the greatest potential danger for investors in stocks funds. Stock prices can fluctuate for a broad range of reasons – such as the overall strength of the economy or demand for particular products or services.

Not all stock funds are the same. For example:

- Growth funds focus on stocks that may not pay a regular dividend but have the potential for large capital gains;

- Income funds invest in stocks that pay regular dividends;

- Index funds aim to achieve the same return as a particular market index, such as the S&P 500 Composite Stock Price Index, by investing in all – or perhaps a representative sample – of the companies included in an index; and

- Sector funds may specialize in a particular industry segment, such as technology or consumer products stocks.
J. BUYING AND SELLING SHARES

Investors can purchase shares in some mutual funds by contacting the fund directly. Other mutual fund shares are sold mainly through brokers, banks, financial planners, or insurance agents. All mutual funds will redeem shares on any business day and must send the payment within seven days.

When an investor buys shares, he or she pays the current NAV per share plus any fee the fund assesses at the time of purchase, such as a purchase sales load or other type of purchase fee. When an investor sells his or her shares, the fund will pay the NAV minus any fee the fund assesses at the time of redemption, such as a deferred (or back-end) sales load or redemption fee. A fund’s NAV goes up or down daily as its holdings change in value.

A “family of funds” is a group of mutual funds that share administrative and distribution systems. Each fund in a family may have different investment objectives and follow different strategies.

Some funds offer exchange privileges within a family of funds, allowing shareholders to transfer their holdings from one fund to another as their investment goals or tolerance for risk change. While some funds impose fees for exchanges, most funds typically do not. To learn more about a fund’s exchange policies, call the fund’s toll-free number, visit its website, or read the “shareholder information” section of the prospectus.

Bear in mind that exchanges have tax consequences. Even if the fund does not charge the investor for the transfer, he or she will be liable for any capital gain on the sale of the shares – or, depending on the circumstances, eligible to take a capital loss.

II. FEES AND EXPENSES

As with any business, running a mutual fund involves costs – including shareholder transaction costs, investment advisory fees, and marketing and distribution expenses. Funds pass along these costs to investors by imposing fees and expenses.

Some funds impose “shareholder fees” directly on investors whenever they buy or sell shares. In addition, every fund has regular, recurring, fund-wide “operating expenses.” Funds typically pay their operating expenses out of fund assets – which means that investors indirectly pay these costs. SEC rules require funds to disclose both shareholder fees and operating expenses in a “fee table” near the front of a fund’s prospectus.

A. SHAREHOLDER FEES

1. Sales Charge (Load) on Purchases

This is the amount an investor pays when buying shares in a mutual fund. Also known as a “front-end load,” this fee typically goes to the brokers that sell the fund’s shares. Front-end loads reduce the amount of the investment. For example, let’s say John has $1,000 and wants to invest it in a mutual fund with a 5% front-end load. The $50 sales load John must pay comes off the top, and the remaining $950 will
be invested in the fund. According to the rules of the Financial Industry Regulatory Authority (FINRA), a front-end load cannot be higher than 8.5% of the investment.

2. **Purchase Fee**

   This is another type of fee that some funds charge their shareholders when they buy shares. Unlike a front-end sales load, a purchase fee is paid to the fund (not to a broker) and is typically imposed to defray some of the fund’s costs associated with the purchase.

3. **Deferred Sales Charge (Load)**

   This is a fee an investor pays when he sells his shares. Also known as a “back-end load,” this fee typically goes to the brokers that sell the fund’s shares. The most common type of back-end sales load is the “contingent deferred sales load” (also known as a “CDSC” or “CDSL”). The amount of this type of load will depend on how long the investor holds his or her shares and typically decreases to zero if the investor holds his or her shares long enough.

4. **Redemption Fee**

   This is another type of fee that some funds charge their shareholders when they sell or redeem shares. Unlike a deferred sales load, a redemption fee is paid to the fund (not to a broker) and is typically used to defray fund costs associated with a shareholder’s redemption.

5. **Exchange Fee**

   This is a fee that some funds impose on shareholders if they exchange (transfer) to another fund within the same fund group or “family of funds.”

6. **Account Fee**

   This is a fee that some funds separately impose on investors in connection with the maintenance of their accounts. For example, some funds impose an account maintenance fee on accounts whose value is less than a certain dollar amount.

**B. ANNUAL FUND OPERATING EXPENSES**

1. **Management Fees**

   These are fees that are paid out of fund assets to the fund’s investment adviser for investment portfolio management, any other management fees payable to the fund’s investment adviser or its affiliates, and administrative fees payable to the investment adviser.

2. **Distribution [and/or Service] Fees (“12b-1” Fees)**

   These are fees paid by the fund out of fund assets to cover the costs of marketing and selling fund shares and sometimes to cover the costs of providing shareholder services. “Distribution fees” include fees to compensate brokers and others who sell fund shares and to pay for advertising, the printing and mailing of prospectuses to new investors, and the printing and mailing of sales literature.
3. **Shareholder Service Fees**

These are fees paid to persons to respond to investor inquiries and provide investors with information about their investments.

4. **Other Expenses**

These are expenses not included under “Management Fees” or “Distribution or Service (12b-1) Fees,” such as any shareholder service expenses that are not already included in the 12b-1 fees, custodial expenses, legal and accounting expenses, transfer agent expenses, and other administrative expenses.

5. **Total Annual Fund Operating Expenses (“Expense Ratio”)**

This is the line of the fee table that represents the total of all of a fund’s annual fund operating expenses, expressed as a percentage of the fund’s average net assets. Looking at the expense ratio can help investors make comparisons among funds.

C. **“NO-LOAD” FUNDS**

Some funds call themselves “no-load.” As the name implies, this means that the fund does not charge any type of sales load. But, as discussed above, not every type of shareholder fee is a “sales load.” A no-load fund may charge fees that are not sales loads, such as purchase fees, redemption fees, exchange fees, and account fees. No-load funds will also have operating expenses.

Investors should be sure to review carefully the fee tables of any funds they are considering, including no-load funds. Even small differences in fees can translate into large differences in returns over time.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>If Austin invested $10,000 in a fund that produced a 10% annual return before expenses and had annual operating expenses of 1.5%, then after 20 years he would have roughly $49,725. But if the fund had expenses of only 0.5%, then he would end up with $60,858 – an 18% difference.</td>
</tr>
</tbody>
</table>

D. **BREAKPOINTS**

Some mutual funds that charge front-end sales loads will charge lower sales loads for larger investments. The investment levels required to obtain a reduced sales load are commonly referred to as “breakpoints.”

The SEC does not require a fund to offer breakpoints in the fund’s sales load. But, if breakpoints exist, the fund must disclose them. In addition, a brokerage firm that is a member of FINRA (formerly known as the National Association of Securities Dealers) should not sell an investor shares of a fund in an amount that is “just below” the fund’s sales load breakpoint simply to earn a higher commission. Each fund company establishes its own formula for how they will calculate whether an investor is entitled to receive a breakpoint.
III. TAX CONSEQUENCES OF MUTUAL FUNDS

A. GENERAL RULES

When an investor buys and holds an individual stock or bond, the investor must pay income tax each year on the dividends or interest received. But the investor will not have to pay any capital gains tax until he or she actually sells and unless he or she makes a profit. Mutual funds are different.

When an investor buys and holds mutual fund shares, he or she will owe income tax on any ordinary dividends in the year he or she receives or reinvests them. And, in addition to owing taxes on any personal capital gains when the investor sells his or her shares, the investor may also have to pay taxes each year on the fund’s capital gains. That is because the law requires mutual funds to distribute capital gains to shareholders if they sell securities for a profit that cannot be offset by a loss.

Bear in mind that if an investor receives a capital gains distribution, he or she will likely owe taxes – even if the fund has had a negative return from the point during the year when the individual investor purchased his or her shares. For this reason, investors should call the fund to find out when it makes distributions so they will not pay more than their fair share of taxes. Some funds post that information on their websites.

With investments in a tax-exempt fund – such as a municipal bond fund – some or all of the dividends will be exempt from federal (and sometimes state and local) income tax. Investors will, however, owe taxes on any capital gains.

SEC rules require mutual funds to disclose in their prospectuses after-tax returns. In calculating after-tax returns, mutual funds must use standardized formulas similar to the ones used to calculate before-tax average annual total returns. When comparing funds, investors need to take taxes into consideration.

B. TAX TREATMENT OF DISTRIBUTIONS

A distribution an individual receives from a mutual fund may be an ordinary dividend, a qualified dividend, a capital gain distribution, an exempt-interest dividend, or a nontaxable return of capital. The fund will send investors a Form 1099-DIV or similar statement telling them the kind of distribution they received. In some cases, an investor may be treated as having received a distribution of capital gains even if the fund does not distribute them.

C. ORDINARY DIVIDENDS

An ordinary dividend is a distribution by a mutual fund out of its earnings and profits. Ordinary dividends that an investor receives from a mutual fund are included as dividend income on an individual’s income tax return. Ordinary dividends are the most common type of dividends. They will be reported in box 1a of Form 1099-DIV or on a similar statement investors receive from the mutual fund.
D. QUALIFIED DIVIDENDS

Qualified dividends are taxed at the same lower rates that apply to a net capital gain. Qualified dividends will be taxed at 0% for taxpayers in the 10% and 15% tax brackets, 15% for taxpayers in the 25%, 28%, 33%, and 35% tax brackets, and 20% for taxpayers in the 39.6% tax bracket. To be a qualified dividend subject to the lower rates, a dividend must meet all of the following requirements.

• The dividend must have been paid by a U.S. corporation or a qualified foreign corporation;

• The dividend must not be of a type excluded by law from the definition of a qualified dividend; and

• The investor must meet the holding period requirement, discussed below.

The investor must have held the stock for more than 60 days during the 121-day period that begins 60 days before the ex-dividend date. The ex-dividend date is the first date following the declaration of a dividend on which the buyer of a stock will not receive the next dividend payment. Instead, the seller will get the dividend. When counting the number of days the stock was held, the day the stock was disposed of should be included, but not the day it was acquired.

E. CAPITAL GAIN DISTRIBUTIONS

These distributions are paid by mutual funds from their net realized long-term capital gains. The Form 1099-DIV (box 2a) investors receive or the fund’s statement will tell them the amount they are to report as a capital gain distribution. Capital gain distributions are taxed as long-term capital gains regardless of how long an investor has owned the shares in the mutual fund.

Mutual funds may keep some of their long-term capital gains and pay taxes on those undistributed amounts. Investors must report their share of these amounts as long-term capital gains, even though they did not actually receive a distribution. The investors can take a credit for any tax paid because they are considered to have paid it. When an investor reports undistributed capital gains from a mutual fund, they must increase their basis in the shares.

F. EXEMPT-INTEREST DIVIDENDS

A mutual fund may pay exempt-interest dividends to its shareholders if it meets certain requirements. These dividends are paid from tax-exempt interest earned by the fund. Since the exempt-interest dividends keep their tax-exempt character, they are not included as income. However, investors may need to report them on their return. The mutual fund will send investors a statement within 60 days after the close of its tax year showing their exempt-interest dividends. Exempt-interest dividends are not shown on Form 1099-DIV.

Although exempt-interest dividends are not taxable, investors must report them on their tax return if they are required to file. This is an information reporting requirement and does not convert tax-exempt interest to taxable interest. Also, this income is generally a “tax preference item” and may be subject to the alternative minimum tax.
G. NONDIVIDEND DISTRIBUTIONS

A distribution that is not out of earnings and profits is a return of investment, or capital, in the mutual fund and is shown in box 3 of Form 1099-DIV. These returns of capital distributions are generally not taxed and are sometimes called tax-free dividends or nontaxable distributions.

A return of capital distribution reduces an investor’s basis in the shares. An investor’s basis cannot be reduced below zero. If an investor’s basis is zero, he or she must report the return of capital distribution on their tax return as a capital gain. Whether it is a long-term or short-term capital gain depends on how long the investor held the shares.

Example

Liz bought shares in 2003 for $100. In 2006, she received a nondividend distribution of $80. Liz did not include this amount in her income, but she reduced the basis of her stock to $20. Liz received a nondividend distribution of $30 in 2016. The first $20 of this amount reduced her basis to zero. Liz reports the other $10 as a long-term capital gain for 2016. Liz must report as a long-term capital gain any nondividend distribution she receives on this stock in later years.

H. REINVESTMENT OF DISTRIBUTIONS

Most mutual funds permit shareholders to automatically reinvest distributions in more shares in the fund, instead of receiving cash. Investors must report the reinvested amounts the same way as they would report them if they received them in cash. This means that reinvested ordinary dividends and capital gain distributions generally must be reported as income. Reinvested exempt-interest dividends generally are not reported as income.

IV. TRACKING BASIS

It is impossible to determine an investor’s tax liability without understanding his or her basis in an investment. Investors should therefore keep track of their basis in mutual fund shares to figure any gain or loss on the shares when they sell, exchange, or redeem them.

A. TYPES OF BASIS

1. Original Basis

Original basis depends on how an investor acquired his or her shares.

2. Adjusted Basis

An investor’s original basis is adjusted (increased or decreased) by certain events.
B. SHARES ACQUIRED BY PURCHASE

The original basis of mutual fund shares an investor purchased is usually his or her cost or purchase price. The purchase price usually includes any commissions or load charges paid for the purchase.

**Example**

Rich bought 100 shares of Fund A for $10 a share. He paid a $50 commission to the broker for the purchase. His cost basis for each share is $10.50 ($1,050 ÷ 100).

When buying or selling shares in a fund, investors should keep the confirmation statements they receive. The statements show the price paid for the shares when they were bought, and the price received when they were sold. The information from the confirmation statement when the investor purchased the shares will help him or her calculate his or her basis in the fund.

1. Commissions and Load Charges

The fees and charges an investor pays to acquire or redeem shares of a mutual fund are not deductible. Investors can usually add acquisition fees and charges to their cost of the shares and thereby increase their basis. A fee paid to redeem the shares is usually a reduction in the redemption price (sales price).

Investors cannot add their entire acquisition fee or load charge to the cost of the mutual fund shares acquired if all of the following conditions apply:

- The individual receives a reinvestment right because of the purchase of the shares or the payment of the fee or charge;
- The individual disposes of the shares within 90 days of the purchase date;
- The individual acquires new shares in the same mutual fund or another mutual fund, for which the fee or charge is reduced or waived because of the reinvestment right the individual received when he or she acquired the original shares; and

The amount of the original fee or charge in excess of the reduction above is added to the cost of the original shares. The rest of the original fee or charge is added to the cost basis of the new shares (unless all three conditions above also apply to the purchase of the new shares).

C. REINVESTMENT RIGHTS

This is the right to acquire mutual fund shares in the same or another mutual fund without paying a fee or load charge, or by paying a reduced fee or load charge.

The original cost basis of mutual fund shares acquired by reinvesting distributions is the amount of the distributions used to purchase each full or fractional share. This rule applies even if the distribution is an exempt-interest dividend that the investor does not report as income.
When an investor acquires shares through reinvestment, he or she should keep the statements that show each date, amount, and number of full or fractional shares purchased.

**D. SHARES RECEIVED AS GIFT**

Generally, an investor must know the basis per share to compute gain or loss when he or she disposes of the shares. To determine the original basis of mutual fund shares an individual acquired by gift, he or she must know:

- The donor’s adjusted basis;
- The date of the gift;
- The fair market value (the last quoted public redemption price) of the shares at the time of the gift; and
- Any gift tax paid on the gift of the shares.

If the fair market value (FMV) of the shares at the time of the gift was less than the adjusted basis to the donor at the time of the gift, the recipient’s basis for gain on his or her disposition is the donor’s adjusted basis. The recipient’s basis for loss is the FMV of the shares at the time of the gift. In this situation, it is possible to sell the shares at neither a gain nor a loss because of the basis the recipient has to use.

**Example**

Justin is given mutual fund shares with an adjusted basis of $10,000 at the time of the gift. The FMV of the shares at the time of the gift is $9,000. Justin later sells the shares for $9,500. The basis for figuring a gain is $10,000, so there is no gain. There also is no loss, since the basis for figuring a loss is $9,000. In this situation, Justin neither has a gain nor a loss.

If the FMV of the shares at the time of the gift was equal to or more than the donor’s adjusted basis just before the gift, the recipient’s basis for gain or loss on its sale or other disposition is the donor’s adjusted basis, plus or minus any required adjustments to basis during the period the property is held. Also, you may be allowed to add all or part of any gift tax paid on the gift, depending on the date of the gift.

**E. SHARES ACQUIRED BY INHERITANCE**

If an individual inherited shares in a mutual fund, his or her original basis is generally the fair market value (FMV) (the last quoted public redemption price) on the date of the decedent’s death, or the alternate valuation date if chosen for estate tax purposes.

If the estate filed Form 706 after July 31, 2015, the individual may receive an information statement from the estate showing the value of the inherited property.
In community property states, an individual and his or her spouse generally are considered to each own half the estate (excluding separate property). If one spouse dies and at least half of the community interest is includible in the decedent’s gross estate (whether or not the estate is required to file a return), the FMV of the community property at the date of death becomes the basis of both halves of the property. For example, if the FMV of the entire community interest in a mutual fund is $100,000, the basis of the surviving spouse’s half of the shares is $50,000. The basis of the heirs’ half of the shares also is $50,000.

In determining the basis of assets acquired from a decedent, property held in joint tenancy is community property if its status was community property under state law.

A different basis rule applies to inherited shares that an individual and his or her spouse gave the decedent within the 1-year period ending on the date of the decedent’s death if, on the date of the gift, the shares were appreciated property. In this situation, the basis of the inherited shares is the decedent’s adjusted basis in them immediately before his or her death, rather than their FMV.

This basis rule also applies if the decedent’s estate (or a trust of which the decedent was the grantor) sells the shares instead of distributing them to an individual, and that individual is entitled to the proceeds.

F. ADJUSTED BASIS

After an investor acquires mutual fund shares, he or she may need to make adjustments to his or her basis. The adjusted basis of an investor’s shares is the investor’s original basis increased or reduced as described here.

1. Addition to Basis

Investors should increase the basis in their shares by the difference between the amount of undistributed capital gain they include in income and the tax considered paid on that income. The mutual fund reports the amount of an investor’s undistributed capital gain in box 1a of Form 2439. Investors should keep Copy C of all Forms 2439 to show increases in the basis of their shares.

2. Reduction of Basis

Investors must reduce their basis in shares by any return of capital distributions that they receive from the fund. The mutual fund reports the amount of any return of capital distributions in box 3 of Form 1099–DIV. Investors should keep the form to show the decrease in the basis of their shares.

3. No Reduction of Basis

Investors should not reduce their basis for distributions from the fund that are exempt-interest dividends.
The following worksheet can be used to keep track of the adjusted basis of mutual fund shares. Investors should enter the cost per share when they acquire new shares and any adjustments to their basis when the adjustment occurs. This worksheet will help calculate the adjusted basis when the investor sells or redeems shares.

1 Include shares received from reinvestment of distributions.

2 Cost plus or minus adjustments.

V. SALES, EXCHANGES AND REDEMPTIONS

When an investor sells or exchanges his or her mutual fund shares, or if they are redeemed (a redemption), the investor will generally have a taxable gain or a deductible loss. This also applies to shares of a tax-exempt mutual fund. Sales, exchanges, and redemptions are all treated as sales of capital assets. The amount of the gain or loss is the difference between an investor’s adjusted basis in the shares and the amount realized from the sale, exchange, or redemption.

In general, a sale is a transfer of shares for money only, an exchange is a transfer of shares in return for other shares, and a redemption occurs when a fund reacquires its shares from an investor in exchange for money or other property.
Any exchange of shares in one fund for shares in another fund is a taxable exchange. This is true even if an investor exchanges shares in one fund for shares in another fund within the same family of funds.

A. IDENTIFYING THE SHARES SOLD

To figure a gain or loss when disposing of mutual fund shares, an investor needs to determine which shares were sold and the basis of those shares. If an investor’s shares in a mutual fund were acquired all on the same day and for the same price, figuring their basis is not difficult. However, shares are generally acquired at various times, in various quantities, and at various prices. Therefore, calculating the basis can be a difficult task. Investors can choose to use either a cost basis or an average basis to figure their gain or loss.

1. Cost Basis

Investors can calculate their gain or loss using a cost basis only if they did not previously use an average basis for a sale, exchange, or redemption of other shares in the same mutual fund. To figure cost basis, investors can choose one of the following methods:

- Specific share identification; or
- First-in first-out (FIFO).

a. Specific Share Identification

If an investor adequately identifies the shares he or she sold, the investor can use the adjusted basis of those particular shares to figure his or her gain or loss. An investor will adequately identify his or her mutual fund shares, even if he or she bought the shares in different lots at various prices and times, if the investor:

- Specifies to his or her broker or other agent the particular shares to be sold or transferred at the time of the sale or transfer; and
- Receives confirmation in writing from his or her broker or other agent within a reasonable time of their specification of the particular shares sold or transferred.

An investor continues to have the burden of proving his or her basis in the specific shares at the time of sale or transfer.

b. First-in First-Out (FIFO)

If an investor’s shares were acquired at different times or at different prices and the investor cannot identify which shares he or she sold, the investor should use the basis of the shares he or she acquired first as the basis of the shares sold. In other words, the oldest shares an investor owns are considered sold first. Investors should keep a separate record of each purchase and any dispositions of the shares until all shares purchased at the same time have been disposed of completely.
2. **Average Basis**

An individual can use the average basis method to determine the basis of shares of stock if the shares are identical to each other, they were acquired at different times and different prices and left in an account with a custodian or agent, and either:

- They are shares in a mutual fund (or other regulated investment company);

- They are shares held in connection with a dividend reinvestment plan (DRP), and all the shares held in connection with the DRP are treated as covered securities (defined later); or

- They were acquired after 2011 in connection with a DRP.

Average basis is determined by averaging the basis of all shares of identical stock in an account regardless of how long the individual has held the stock. However, shares of stock in a dividend reinvestment plan are not identical to shares of stock with the same CUSIP number that are not in a dividend reinvestment plan. The basis of each share of identical stock in the account is the aggregate basis of all shares of that stock in the account divided by the aggregate number of shares.

**a. Transition Rule from Double-Category Method**

Individuals may no longer use the double-category method for figuring their average basis. If an individual was using the double-category method for stock acquired before April 1, 2011 and the individual sells, exchanges or otherwise disposes of that stock on or after April 1, 2011, he or she must figure the average basis of this stock by averaging together all identical shares of stock in the account on April 1, 2011, regardless of the holding period.

**b. Election of Average Basis Method for Covered Securities**

To make the election to use the average basis method for covered securities, the individual must send written notice to the custodian or agent who keeps the account. The written notice can be made electronically. The individual must also notify his or her broker that he or she has made the election. Generally, a covered security is a security acquired after 2010, with certain exceptions explained in the Instructions for Form 8949.

An individual can make the election to use the average basis method at any time. The election will be effective for sales or other dispositions that occur after the individual notifies the custodian or agent of his or her election. The election must identify each account with that custodian or agent and each stock in that account to which the election applies. The election can also indicate that it applies to all accounts with a custodian or agent, including accounts later established with the custodian or agent.

**c. Revoking the Average Basis Method Election**

Individuals can revoke an election to use the average basis method for covered securities by sending written notice to the custodian or agent holding the stock for which they want to revoke the election. The election must generally be revoked by the earlier of 1 year after the election is made or the date of the
first sale, transfer, or disposition of the stock following the election. The revocation applies to all the stock held in an account that is identical to the shares of stock for which they are revoking the election. After revoking the election, the basis in the shares of stock to which the revocation applies is the basis before averaging.

**Note**

You may be able to find the average basis of your shares from information provided by the fund.

**Note**

When there is a sale, exchange, or redemption of shares in a fund, keep the confirmation statement received. The statement shows the price received for the shares and other information needed to report gain or loss on the return.

**TABLE 7-2. EXAMPLE OF HOW TO FIGURE BASIS OF SHARES SOLD**

This is an example showing two different ways to figure basis. It compares the cost basis using the FIFO method with the average basis using the single-category method.

<table>
<thead>
<tr>
<th>Date</th>
<th>Action</th>
<th>Share Price</th>
<th>No. of Shares</th>
<th>Total Shares Owned</th>
</tr>
</thead>
<tbody>
<tr>
<td>02/08/14</td>
<td>Invest $4,000</td>
<td>$25</td>
<td>160</td>
<td>160</td>
</tr>
<tr>
<td>08/09/14</td>
<td>Invest $4,800</td>
<td>$20</td>
<td>240</td>
<td>400</td>
</tr>
<tr>
<td>12/18/14</td>
<td>Reinvest $300 dividend</td>

<td>410</td>
</tr>
<tr>
<td>10/01/16</td>
<td>Sell 210 shares for $6,720</td>
<td>$32</td>
<td>210</td>
<td>200</td>
</tr>
</tbody>
</table>

**COST BASIS (FIFO)**

To figure the basis of the 210 shares sold on 10/01/16, use the share price of the first 210 shares you bought, namely, the 160 shares you purchased on 02/08/14 and 50 of those purchased on 08/09/14.

\[
\text{Basis} = \frac{\text{Cost of 160 shares on 02/08/14}}{160} + \frac{\text{Cost of 50 shares of 08/09/14}}{50}
\]

\[
\text{Basis} = \frac{4,000}{160} + \frac{1,000}{50} = 25 + 20 = 45
\]

\[
\text{Basis} = 5,000
\]
<table>

|   | B. they may choose from several methods to calculate their gain or loss  
|   | C. they must use the first-in-first-out method  
|   | D. there is no need to calculate basis as the earnings are not subject to income or capital gains taxes |
# Chapter 7: Solutions and Suggested Responses

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

1. **A.** Incorrect. Most Americans who put money into equities do so through shares in mutual funds. This means they do not have to choose individual stocks in which to invest.

   **B. CORRECT.** Most Americans put their money into mutual funds because they offer the chance to invest in equities with professional management.

   **C.** Incorrect. This type of investment is usually limited to the very rich and sophisticated investor.

   **D.** Incorrect. Bonds are notes of indebtedness, not equities.

   *(See page 127 of the course material.)*

2. **A.** Incorrect. These funds are not registered and tend to cater to high income people with a high degree of financial sophistication.

   **B. CORRECT.** These are purely private, unregistered funds that have traditionally been limited to the wealthy. They are not highly regulated like mutual funds, and, therefore, do not offer the same type of investor protections as the more traditional mutual funds.

   **C.** Incorrect. While they are usually the vehicle of the wealthy, they are not highly regulated.

   **D.** Incorrect. They generally purchase corporate stocks, and are not trusts.

   *(See page 128 of the course material.)*

3. **A.** Incorrect. This is not the only differentiation between traditional hedge funds and funds of hedge funds.

   **B.** Incorrect. Funds of hedge funds typically allow lower minimum investment thresholds, thereby making them different from traditional hedge funds.

   **C.** Incorrect. Funds of hedge funds that select to register with the SEC can, and typically do, have a larger number of individual investors than traditional hedge funds. This is only one of several factors differentiating the two “funds.”

   **D. CORRECT.** This investment product, “funds of hedge funds,” typically differs in many ways from traditional hedge funds. For example, some may choose to register with the SEC, allow lower minimum investment levels, and sell their shares to a larger number of investors than traditional hedge funds.

   *(See page 128 of the course material.)*

| 7. | A. Incorrect. In some cases, the correct method is to average the price of all shares. However, this is only an option where the shares were purchased at different times.  
B. **CORRECT.** There are several methods for making such a calculation depending on the circumstances of each individual shareholder. For example, taxpayers can use the first-in-first-out or specific share identification methods.  
C. Incorrect. This method can be used where the shares were acquired at different times or at different prices, but is not mandatory in every case.  
D. Incorrect. Such gains are indeed taxable.  
   *(See pages 143 to 144 of the course material.)* |
I. INTRODUCTION AND OVERVIEW

For individuals who own their own business, good financial planning includes selecting the appropriate type of entity for that business. There are many factors that go into choosing a type of business entity, but federal taxes, most notable self-employment tax and income tax, are certainly an important component of that consideration.

For purposes of federal tax, the law sets forth three basic models of taxation of businesses and individuals: subchapter C, subchapter K and subchapter S. Subchapter C applies to corporations. It imposes an entity level tax on the corporation as well as a tax on individual shareholders who receive corporate distributions (i.e., dividends).

<td>Shareholders not entitled to deduct the losses of the corporation; “double taxation”</td>
</tr>
</tbody>
</table>
Subchapter S status is available to C corporations that meet certain strict statutory requirements. It allows shareholders or relatively small corporations to avoid entity-level taxation: similar to partnership treatment, all of the profits and losses of the corporation are passed through to the individual shareholders.

Finally, subchapter K applies to partnerships, limited liability companies and certain other unincorporated entities. Like S corporations, owners are allowed to elect pass-through taxation. Partnerships are not subject to the income tax. However, a partnership is required to file Form 1065, which reports the results of the partnership’s business activities. Individual partners pay taxes on their individual returns.

The partnership net profit (loss) and the separately reported items are allocated to each partner according to the partnership’s profit sharing agreement, and the partners receive separate K-1 schedules from the partnership. Schedule K-1 reports each partner’s share of the partnership net profit and separately reported income and expense items. Each partner reports these items on his or her own tax return.

The two types of federal taxation that are most frequently considered in making a choice of entity are income tax and self-employment tax. Rules regarding income taxation of specific entities will be discussed later. Following is a discussion of self-employment tax and its application in choice of entity.

**A. SELF-EMPLOYMENT TAX**

Self-employment tax is a social security and Medicare tax that mainly affects persons who work for themselves. Many people consider ways to avoid self-employment taxes when considering a choice of entity. The reason is that the self-employment tax rate is double the rate paid by employees. For 2017, the rate consists of two parts: 12.4% for social security (old-age, survivors, and disability insurance) and 2.9% for Medicare (hospital insurance). There is, however, a cap on the amount of income that is subject to the social security tax portion. In 2017, for example, up to $127,200 of combined net earnings is subject to social security tax. Taxpayers can deduct half of their self-employment tax in figuring adjusted gross income; however, the adjustment does not affect the amount of self-employment tax actually owed.

In addition, wages in excess of $200,000 ($250,000 MJ) are subject to an additional Medicare tax of .9% and a 3.8% additional tax on the lesser of unearned income (exclusions apply) or wages in excess of the $200,000 ($250,000 MJ).

*Can be offset by income tax provisions
The IRS considers the following groups of people to be self-employed and therefore subject to self-employment tax:

- Persons who carry on a trade or business as a sole proprietor or an independent contractor;
- Members of a partnership that carries on a trade or business; and
- Persons who are otherwise in business for themselves.

A trade or business is generally an activity carried on for a livelihood or in good faith to make a profit. The facts and circumstances of each case determine whether or not an activity is a trade or business. The regularity of activities and transactions and the production of income are important elements. You do not need to actually make a profit to be in a trade or business as long as you have a profit motive. You do need, however, to make ongoing efforts to further the interests of your business.

1. Part-Time Business

An individual does not have to carry on regular full-time business activities to be self-employed. Having a part-time business in addition to a regular job or business may also be self-employment.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bill is employed full time as an engineer at the local plant. He fixes televisions and radios during the weekends. Bill has his own shop, equipment, and tools. He gets his customers from advertising and word-of-mouth. Bill is self-employed as the owner of a part-time repair shop.</td>
</tr>
</tbody>
</table>

2. Sole Proprietor

An individual is a sole proprietor if he or she is the sole owner of an unincorporated business.

3. Independent Contractor

People such as doctors, dentists, veterinarians, lawyers, accountants, contractors, subcontractors, public stenographers, or auctioneers who are in an independent trade, business, or profession in which they offer their services to the general public are generally independent contractors. However, whether these people are independent contractors or employees depends on the facts in each case. The general rule is that an individual is an independent contractor if the payer has the right to control or direct only the result of the work and not what will be done and how it will be done. The earnings of a person who is working as an independent contractor are subject to SE tax.

An individual is not an independent contractor if he or she performs services that can be controlled by an employer (what will be done and how it will be done). This applies even if an individual is given freedom of action. What matters is that the employer has the legal right to control the details of how the services are performed.
If an employer-employee relationship exists (regardless of what the relationship is called), the individual is not an independent contractor and his or her earnings are generally not subject to SE tax. However, the individual’s earnings as an employee may be subject to SE tax under other rules discussed in this section.

**B. SOLE PROPRIETORS**

A sole proprietorship has no existence separate and apart from its owner. It does not file a tax return and is not liable for taxes. The proprietor himself is liable for all of the profits and losses of the business. A sole proprietor is required to report all net profits from the business, whether they are retained in the business’ account or not. The individual reports his income on Schedule C of Form 1040.

Sole proprietors are, as mentioned above, subject to self-employment tax on business profits. Because a sole proprietor is not an employee, no deduction is permitted for fringe benefits offered by the business. A sole proprietor, however, may deduct 100 percent of insurance premiums paid for accident and health insurance for the sole proprietor and the proprietor’s spouse and dependents.

In fact, a sole proprietor may deduct 100 percent of insurance premiums paid for accident and health insurance, as well as medical reimbursements, for the sole proprietor and the proprietor’s spouse and dependents if the sole proprietor provides the coverage to his or her spouse who is an employee of the business. The spouse may exclude the premium payments from income and/or any medical expense reimbursements, provided that the spouse is a bona fide employee of the business. However, if the spouse is self-employed (e.g., a partner) in the business, the accident and health insurance premiums and/or medical expense reimbursements, while deductible by the proprietorship, are included in the spouse’s income and may be deducted by the spouse to the extent allowed to a sole proprietor.

**II. DISREGARDED ENTITIES: THE LIMITED LIABILITY COMPANY**

Historically, businesses had to choose between the protection from liability offered by the corporation and the pass-through taxation offered by the partnership or sole proprietorship. This has changed dramatically over the past few decades.

Today, all 50 states allow a business to choose limited liability company (LLC) status and limited liability partnerships (LLP), which essentially allow all partners the protections of limited partner status in a general partnership. Each state has its own specific laws that determine what types of partnerships are eligible and the scope of limited liability offered.

**A. HISTORICAL TREATMENT**

One of the many benefits of limited liability company status is the ability of the owners to elect pass-through taxation. But when the IRS first recognized the existence of LLCs as a business form, not all LLCs were able to qualify for pass-through tax status. Federal regulations in place prior to 1997 required an unincorporated business entity – whether it be a limited liability company or a partnership – to possess certain characteristics or else it was treated as a corporation for federal tax purposes.
Under the old regulations (known as the “Kintner Regulations”), an unincorporated business association would be taxed as a partnership only if it possessed no more than two of the following corporate characteristics:

- Centralization of management;
- Continuity of life;
- Free transferability of interests; and
- Limited liability.

The continuing of life restriction was the biggest impediment to limited liability companies being taxed as partnerships. It led most early state statutes governing limited liability companies to impose time limitations on the existence of the entity in order to protect its pass-through tax status. That all changed with the adoption of the so-called “check-the-box” regulations by the IRS.

Check-the-box regulations became effective in 1997, eliminating application of the so-called Kintner regulations that had previously been used to determine if a business association should be treated as a partnership or corporation for purposes of federal taxation. The key change was the elimination of the requirement that a limited liability company have a limited life span in order to qualify for pass-through taxation (under the old regulation, a company with an unlimited life span was too similar to a corporation to avoid being taxed as such).

The changes also made possible more flexibility in other types of unincorporated business associations, such as limited liability partnerships.

B. FEDERAL TAX RETURNS

For federal tax purposes, a limited liability company can be treated as either a sole proprietorship, a partnership or a corporation. In order to elect treatment as a partnership, a limited liability company must have at least two members. Those with only one can elect to be treated either as a sole proprietorship or a corporation.

Consequently, the applicable tax payment requirements of a limited liability company depend on the tax treatment elected by the company. To the extent that a limited liability company elects to be treated as a partnership for purposes of federal taxation, normal rules governing taxation of partnerships apply. To the extent a limited liability company elects to be treated as a corporation for purposes of federal taxation, normal rules governing taxation of corporations likewise generally apply. An in-depth discussion of partnership and corporation taxation is well beyond the scope of this course. This section will therefore be limited to a discussion of a few significant areas of taxation affecting limited liability companies.

Even though a co-owned LLC itself does not pay income taxes, it must file Form 1065 with the IRS. This form, the same one that a partnership files, is an informational return that the IRS reviews to make sure the LLC members are reporting their income correctly. The LLC must also provide each LLC member with a “Schedule K-1,” which breaks down each member’s share of the LLC’s profits and losses. In turn, each LLC member reports this profit and loss information on his individual Form 1040, with Schedule E
attached. The check-the-box regulations give limited liability companies flexibility in deciding how they want to be taxed and therefore what type of tax return to file.

1. Single-Member LLC

Generally, when an LLC has only one member, the fact that it is an LLC is ignored or “disregarded” for the purpose of filing a federal tax return. The LLC has the following options for purposes of federal taxation:

- If the only member of the LLC is an individual, the LLC income and expenses are reported on Form 1040, Schedule C, E, or F;
- If the only member of the LLC is a corporation, the LLC income and expenses are reported on the corporation’s return, usually Form 1120 or Form 1120S; and
- If a single-member LLC wishes to file as a corporation instead of as a “disregarded entity,” Form 8832 must be submitted. Otherwise, there is no need to file Form 8832. Single-member LLCs may not file a partnership return.

For a single-member LLC being disregarded as an entity, the taxable year of the proprietor (usually the calendar year) is automatically the taxable year of the proprietorship. There are tax-deductible fringe benefits available to a sole proprietor, although they are more limited than those available to a corporation. A sole proprietor may contribute annually to a Keogh plan to the same limits available under corporate plans, and a proprietor may contribute to an individual retirement account.

2. Multiple-Member LLCs

Most LLCs with more than one member file a partnership return, Form 1065. A multi-member LLC that wants to file as a corporation must submit Form 8832. Form 8832 does not need to be submitted if the LLC wants to file as a partnership.

There is one significant limitation to the ability of a multi-member LLC to be treated as a partnership for tax purposes. Pursuant to I.R.S. Code § 7704, interests in the company cannot be publicly traded if the company wants to be treated as a partnership.

Table 8-2, below, summarizes the forms that a LLC is required to file depending on the number of members it has and the manner in which it elects to be taxed.

C. EMPLOYMENT AND SELF-EMPLOYMENT TAXES

As we saw in the earlier discussion, employment tax requirements apply to LLCs in much the same way as other types of unincorporated businesses. Employees of all LLCs are subject to withholding taxes. Forms W-2 and Forms 1099 must be filed when required of all employers.

1. Self-Employment Taxes

Because LLC members are not employees but self-employed business owners, contributions to the Social Security and Medicare systems (collectively called the “self-employment” tax) are not withheld from their paychecks. Instead, most LLC owners are required to pay the self-employment tax directly to the IRS. With an S corporation, on the other hand, a shareholder pays the payroll tax on money received as compensation for services, but not on profits that automatically pass through as a shareholder.

The current rule is that any owner who works in or helps manage the business must pay this tax on his or her distributive share – i.e., his or her share of profits. However, owners who are not active in the LLC – that is, those who have merely invested money but do not provide services or make management decisions for the LLC – may be exempt from paying self-employment taxes on their share of profits.

Each owner who is subject to the self-employment tax reports it on Schedule SE, which is submitted annually with a 1040 tax return. LLC owners pay twice as much self-employment tax as regular employees, since regular employees’ contributions to the self-employment tax are matched by their employers.

a. LLCs Filing Schedule C or E

Members are subject to self-employment taxes on earnings.

b. LLCs Filing Partnership Returns

Generally, members pay self-employment tax on their share of partnership earnings. There is a special rule for members who are the equivalent of limited partners. They pay self-employment tax only if the LLC pays them a “guaranteed payment” for services. As a member, an owner’s liability for LLC debts are limited by state law. However, members, like shareholders of corporations, may be held personally liable in situations involving unpaid employee withholdings if the member in question is determined to be the person responsible for making the payments. Proposed IRS regulations would impose the self-employment tax on an LLC owner’s entire share of LLC profits in any of the following situations:

- The owner participates in the business for more than 500 hours during the LLC’s tax year;
- The LLC provides professional services in the fields of health, law, engineering, architecture, accounting, actuarial science or consulting (no matter how many hours the owner works); or
- The owner is empowered to sign contracts on behalf of the LLC.

Until the IRS clarifies the rules on self-employment tax for members of an LLC, members should assume that 100% of their earnings could be subject to self-employment tax.
D. TAXATION OF DISTRIBUTIONS

Each LLC member’s share of profits and losses, called a distributive share, is set out in the LLC operating agreement.

Most operating agreements provide that a member’s distributive share is in proportion to his percentage interest in the business. For instance, if Bill owns 70% of the LLC, and John owns the other 30%, Bill will be entitled to 70% of the LLC’s profits and losses, and John will be entitled to the other 30%. If the members want to divide profits and losses in a manner that is not proportionate to the members’ percentage interests in the business, it is called a “special allocation,” and must comply with specific IRS rules.

Distributions to equity owners of businesses taxed as partnerships are normally not subject to income tax pursuant to IRC § 731, which provides, in part, that "gain shall not be recognized . . . except to the extent that any money distributed exceeds the adjusted basis of such partner’s interest in the partnership immediately before the distribution."

Any gain recognized is generally treated as capital gain from the sale of the partnership interest on the date of the distribution. If partnership property (other than marketable securities treated as money) is distributed to a partner, he or she generally does not recognize any gain until the sale or other disposition of the property.

### Example

The adjusted basis of Jo’s partnership interest is $14,000. She receives a distribution of $8,000 cash and land that has an adjusted basis of $2,000 and a fair market value of $3,000. Because the cash received does not exceed the basis of her partnership interest, Jo does not recognize any gain on the distribution. Any gain on the land will be recognized when she sells or otherwise disposes of it. The distribution decreases the adjusted basis of Jo’s partnership interest to $4,000 [$14,000 - ($8,000 + $2,000)].

Likewise, I.R.C. §731 provides that a member of a limited liability company may not declare a loss “except that upon a distribution in liquidation of a partner’s interest in a partnership where no property other than that described in subparagraph (A) or (B) is distributed to such partner, loss shall be recognized to the extent of the excess of the adjusted basis of such partner’s interest in the partnership over the sum of: (A) any money distributed; and (B) the basis to the distributee.”

In addition, passive activity limitations and at-risk rules that apply to partnerships generally may restrict the amount a member of a limited liability company may deduct.

The at risk rules of I.R.C. § 465 provide that the members are allowed to deduct their share of LLC losses to the extent they have an adequate amount at risk in the relevant activity. Generally, nonrecourse debt is not included in the amount at risk, but an exception exists for “qualified nonrecourse financing,” which typically exists when a commercial lender makes a nonrecourse loan secured by real property.
Unlike a limited partnership in which the general partner is fully liable for partnership obligations, in an LLC no member may be liable for the LLC’s obligations (except to the extent a member has separately agreed to assume them). Accordingly, even if the debt of an LLC is nominally recourse at the entity level, it may be nonrecourse to the members, thereby making it easier for LLC debt secured by real property to constitute “qualified nonrecourse financing.”

For example, in a case of first impression, a federal district court in *Gregg v. U.S.*, 186 F.Supp.2d 1123 (2000), ruled that a member of a limited liability company was entitled to be treated like a general rather than a limited partner for purposes of determining whether he was an active participant in the business and therefore not subject to passive income limits.

E. RETAINED EARNINGS

The benefits of pass-through taxation available to most limited liability companies are obvious. However, there are certain circumstances under which an LLC might benefit from corporate tax status, depending on the nature of the business. One situation where this might be true is when a company has a large amount of retained earnings, that is when a company elects to keep a substantial amount of profits in the company rather than distributing it to its members.

Unlike an LLC, a corporation is responsible for paying taxes on corporate profits left or retained in the business. An LLC that elects corporate tax status, therefore, means that the company will pay tax on the earnings based on the income tax rates that apply to corporations. The members do not have to pay personal income taxes on those profits which are left in the company. And, because the corporate income tax rates for the first $75,000 of corporate taxable income are lower than the individual income tax rates that apply to most LLC owners, this can save an individual and any co-owners money in overall taxes.

A limited liability company that elects corporate tax status by filing Form 8832 is precluded from switching back to partnership status for five years.

F. TAXATION OF A CONVERTED ENTITY

The conversion of a partnership into an LLC classified as a partnership for federal tax purposes does not terminate the partnership. The conversion is not a sale, exchange or liquidation of any partnership interest, the partnership’s tax year does not close, and the LLC can continue to use the partnership’s taxpayer identification number.
However, the conversion may change some of the partners’ bases in their partnership interests if the partnership has recourse liabilities that become nonrecourse liabilities. Because the partners share recourse and nonrecourse liabilities differently, their bases must be adjusted to reflect the new sharing ratios. If a decrease in a partner’s share of liabilities exceeds the partner’s basis, he or she must recognize gain on the excess. The same rules apply if an LLC classified as a partnership is converted into a partnership.

G. STATE TAXES AND FEES

The IRS’s classification of an LLC as a partnership for tax purposes does not govern state law treatment. Most states that do impose a state income tax do, however, follow the federal lead and allow LLC’s to elect pass-through tax status for state tax purposes.

Utah’s law is indicative of that in most states. Section 59-10-801 provides that “for purposes of taxation under this title, a limited liability company or a foreign limited liability company transacting business in the state shall be classified in the same manner as it is classified for federal income tax purposes.” Most states also do not distinguish between domestic and foreign limited liability companies for state tax purposes.

While an LLC might benefit from electing pass-through status for state tax purposes, or may even choose to operate in a state that does not impose an income tax, there could still be other costs associated with operating. For example, a number of states now impose an entity tax on LLCs as well as filing or registration fees which operate as a type of indirect tax.

California, for example, imposes an $800 annual franchise fee on LLCs, while Massachusetts imposes a fee of $500 per year. Florida, which does not have a state income tax, does impose its intangibles tax to membership interests in an LLC.

III. PARTNERSHIPS

As we have already seen, a partnership is not a taxable entity. It files a return, but it is purely informational. A partnership computes its income and files its return in the same manner as an individual. However, certain deductions are not allowed to the partnership. This section will address basic rules in computing profit and loss.

Certain items must be separately stated on the partnership return and included as separate items on the partners’ returns. These items, listed on Schedule K (Form 1065), are the following:

- Ordinary income or loss from trade or business activities;
- Net income or loss from rental real estate activities;
- Net income or loss from other rental activities;
- Gains and losses from sales or exchanges of capital assets;
• Gains and losses from sales or exchanges of property described in § 1231 of the Internal Revenue Code;

• Charitable contributions;

• Dividends (passed through to corporate partners) that qualify for the dividends-received deduction;

• Taxes paid or accrued to foreign countries and U.S. possessions; and

• Other items of income, gain, loss, deduction, or credit, as provided by regulations. Examples include nonbusiness expenses, intangible drilling and development costs, and soil and water conservation expenses.

A. ELECTIONS

The partnership makes most choices about how to figure income. These include choices for the following items:

• Accounting method;

• Depreciation method;

• Method of accounting for specific items, such as depletion or installment sales;

• Nonrecognition of gain on involuntary conversions of property; and

• Amortization of certain organization fees and business start-up costs of the partnership.

However, each partner chooses how to treat the partner’s share of foreign and U.S. possessions taxes, certain mining exploration expenses, and income from cancellation of debt.

B. BUSINESS STARTUP AND ORGANIZATIONAL EXPENSES

1. Starting a Business

When you start a business, treat all eligible costs you incur before you begin operating the business as capital expenditures which are part of your basis in the business. Generally, you recover costs for particular assets through depreciation deductions. However, you generally cannot recover other costs until you sell the business or otherwise go out of business.

For costs paid or incurred after September 8, 2008, you can deduct a limited amount of startup and organizational costs. The costs that are not deducted currently can be amortized ratably over a 180-month period. The amortization period starts with the month you begin operating your active trade or business. You are not required to attach a statement to make this election. You can choose to forgo this election by affirmatively electing to capitalize your startup costs on your income tax return filed by the due date (including extensions) for the tax year in which the active trade or business begins. Once made, the election to either amortize or capitalize startup costs is irrevocable and applies to all startup costs that are related to your trade or business.
For costs paid or incurred after October 22, 2004, and before September 9, 2008, you can elect to
deduct a limited amount of business startup and organizational costs in the year your active trade or
business begins. Any costs not deducted can be amortized ratably over a 180-month period, beginning
with the month you begin business. If the election is made, you must attach any statement required by
Regulations sections 1.1951(b), 1.2481(c), and 1.7091(c), as in effect before September 9, 2008.

Note

You can apply the provisions of Regulations sections 1.1951, 1.2481, and 1.7091 to all
business startup and organizational costs paid or incurred after October 22, 2004,
provided the period of limitations on assessment has not expired for the year of the
election. Otherwise, for business startup and organizational costs paid or incurred after
October 22, 2004, and before September 9, 2008, the provisions under Regulations
sections 1.1951(b), 1.2481(c), and 1.7091(c), as in effect before September 9, 2008, will
apply.

For costs paid or incurred before October 23, 2004, you can elect to amortize business startup and
organization costs over an amortization period of 60 months or more.

2. Startup Costs

Startup costs are amounts paid or incurred for: (a) creating an active trade or business; or (b)
investigating the creation or acquisition of an active trade or business. Startup costs include amounts
paid or incurred in connection with an existing activity engaged in for profit; and for the production of
income in anticipation of the activity becoming an active trade or business.

Qualifying costs. A startup cost is amortizable if it meets both of the following tests.

• It is a cost you could deduct if you paid or incurred it to operate an existing active trade or
  business (in the same field as the one you entered into).

• It is a cost you pay or incur before the day your active trade or business begins.

Startup costs include amounts paid for the following:

• An analysis or survey of potential markets, products, labor supply, transportation facilities,
  etc.

• Advertisements for the opening of the business.

• Salaries and wages for employees who are being trained and their instructors.

• Travel and other necessary costs for securing prospective distributors, suppliers, or
  customers.

• Salaries and fees for executives and consultants, or for similar professional services.
**Nonqualifying costs.** Startup costs do not include deductible interest, taxes, or research and experimental costs.

3. **Costs of Organizing a Partnership**

The costs to organize a partnership are the direct costs of creating the partnership.

**Qualifying costs.** A partnership can amortize an organizational cost only if it meets all the following tests.

- It is for the creation of the partnership and not for starting or operating the partnership trade or business.
- It is chargeable to a capital account.
- It could be amortized over the life of the partnership if the partnership had a fixed life.
- It is incurred by the due date of the partnership return (excluding extensions) for the first tax year in which the partnership is in business. However, if the partnership uses the cash method of accounting and pays the cost after the end of its first tax year, see Cash method partnership under How to Amortize, later.
- It is for a type of item normally expected to benefit the partnership throughout its entire life.

Organizational costs include the following fees.

- Legal fees for services incident to the organization of the partnership, such as negotiation and preparation of the partnership agreement.
- Accounting fees for services incident to the organization of the partnership.
- Filing fees.

**Nonqualifying costs.** The following costs cannot be amortized.

- The cost of acquiring assets for the partnership or transferring assets to the partnership.
- The cost of admitting or removing partners, other than at the time the partnership is first organized.
- The cost of making a contract concerning the operation of the partnership trade or business including a contract between a partner and the partnership.
- The costs for issuing and marketing interests in the partnership such as brokerage, registration, and legal fees and printing costs. These “syndication fees” are capital expenses that cannot be depreciated or amortized.
**Liquidation of partnership.** If a partnership is liquidated before the end of the amortization period, the unamortized amount of qualifying organizational costs can be deducted in the partnership’s final tax year. However, these costs can be deducted only to the extent they qualify as a loss from a business.

4. **How to Amortize**

Deduct startup and organizational costs in equal amounts over the applicable amortization period (discussed earlier). The amortization period chosen for startup costs can be different from the period chosen for organizational costs, as long as both are not less than the applicable amortization period. Once an amortization period is chosen, it cannot be changed.

To figure the deduction, divide the total startup or organizational costs by the months in the amortization period. The result is the amount that can be deducted for each month.

**Cash method partnership.** A partnership using the cash method of accounting can deduct an organizational cost only if it has been paid by the end of the tax year. However, any cost the partnership could have deducted as an organizational cost in an earlier tax year (if it had been paid that year) can be deducted in the tax year of payment.

5. **How to Make the Election**

To elect to amortize startup or organizational costs, the taxpayer must complete and attach Form 4562 to his or her return for the first tax year he or she is in business. The taxpayer may also be required to attach an accompanying statement (described later) to his or her return.

For startup or organizational costs paid or incurred after September 8, 2008, an accompanying statement is not required. Generally, for startup or organizational costs paid or incurred before September 9, 2008, and after October 22, 2004, unless the taxpayer chooses to apply Regulations sections 1.1951, 1.2481, and 1.7091, the taxpayer must also attach an accompanying statement to elect to amortize the costs.

If the taxpayer has both startup and organizational costs, the taxpayer attaches a separate statement (if required) to his or her return for each type of cost.

Generally, the taxpayer must file the return by the due date (including any extensions). However, if the return was timely filed for the year without making the election, the taxpayer can still make the election by filing an amended return within 6 months of the due date of the return (excluding extensions). For more information, see the instructions for Part VI of Form 4562.

A taxpayer can choose to forgo the election to amortize by affirmatively electing to capitalize the startup or organizational costs on his or her income tax return filed by the due date (including extensions) for the tax year in which the active trade or business begins.
The election to either amortize or capitalize startup or organizational costs is irrevocable and applies to all startup and organizational costs that are related to the trade or business.

If a business is organized as a partnership, only the partnership can elect to amortize its startup or organizational costs. A partner cannot make this election. A partner cannot amortize any costs incurred in setting up the partnership. Only the partnership can amortize these costs.

However, an individual can elect to amortize costs incurred to investigate an interest in an existing partnership. These costs qualify as business startup costs if the partnership interest is acquired.

**Start-up costs election statement.** If an election is made to amortize the startup costs, attach a separate statement (if required) that contains the following information.

- A description of the business to which the startup costs relate.
- A description of each startup cost incurred.
- The month the active business began (or was acquired).
- The number of months in the amortization period (which is generally 180 months).

**Filing the statement early.** A taxpayer can elect to amortize startup costs by filing the statement with a return for any tax year before the year the active business begins. If the taxpayer files the statement early, the election becomes effective in the month of the tax year the active business begins.

**Revised statement.** A revised statement can be filed to include any startup costs not included in the original statement. However, the taxpayer cannot include on the revised statement any cost previously treated on his or her return as a cost other than a startup cost. The revised statement can be filed with a return filed after the return on which the taxpayer elected to amortize the startup costs.

**Organizational costs election statement.** If an election is made to amortize a partnership’s organizational costs, attach a separate statement (if required) that contains the following information.

- A description of each cost.
- The amount of each cost.
- The date each cost was incurred.
- The month the partnership began active business (or acquired the business).
- The number of months in the amortization period (which is generally 180 months).
Partnerships. The statement prepared for a cash basis partnership must also indicate the amount paid before the end of the year for each cost.

The taxpayer does not need to separately list any partnership organizational cost that is less than $10. Instead, he or she can list the total amount of these costs with the dates the first and last costs were incurred.

After a partnership makes the election to amortize organizational costs, it can later file an amended return to include additional organizational costs not included in the partnership’s original return and statement.

IV. CORPORATIONS

The classic “knock” on corporate status is the onus of double taxation: the corporation pays federal income on its income at the entity level; the profits taken by shareholders – normally in the form of dividends – are then taxed to the individual. Shareholders who are also employees are allowed to receive a salary that is tax deductible to the corporation so long as it is not “excessive.” But that does not relieve the corporation of paying taxes on its profits.

A. INCOME TAX RETURN

Unless exempt under § 501 of the Internal Revenue Code, all domestic corporations in existence for any part of a taxable year (including corporations in bankruptcy) must file an income tax return whether or not they have taxable income.

A corporation must generally file Form 1120 to report its income, gains, losses, deductions, credits, and to figure its income tax liability. Also, certain organizations must file special returns. For more information, see the instructions for Forms 1120 and special returns.

Generally, a corporation must file its income tax return by the 15th day of the 3rd month after the end of its tax year. A new corporation filing a short-period return must generally file by the 15th day of the 3rd month after the short period ends. A corporation that has dissolved must generally file by the 15th day of the 3rd month after the date it dissolved.

Form 7004 can be filed to request a 6-month extension of time to file a corporation income tax return. The IRS will grant the extension if the form is completed properly, filed, and any tax due is paid by the original due date for the return.

Form 7004 does not extend the time for paying the tax due on the return. Interest, and possibly penalties, will be charged on any part of the final tax due not shown as a balance due on Form 7004. The interest is figured from the original due date of the return to the date of payment.

A corporation that does not file its tax return by the due date, including extensions, may be penalized 5% of the unpaid tax for each month or part of a month the return is late, up to a maximum of 25% of the unpaid tax. If the corporation is charged a penalty for late payment of tax for the same period of time, the penalty for late filing is reduced by the amount of the penalty for late payment. The minimum penalty for
a return that is over 60 days late is the smaller of the tax due or $100. The penalty will not be imposed if the corporation can show the failure to file on time was due to a reasonable cause. Corporations that have a reasonable cause to file late must attach a statement explaining the reasonable cause.

A corporation that does not pay the tax when due may be penalized ½ of 1% of the unpaid tax for each month or part of a month the tax is not paid, up to a maximum of 25% of the unpaid tax. The penalty will not be imposed if the corporation can show that the failure to pay on time was due to a reasonable cause.

If income, social security, and Medicare taxes that a corporation must withhold from employee wages are not withheld or are not deposited or paid to the United States Treasury, the trust fund recovery penalty may apply. The penalty is the full amount of the unpaid trust fund tax. This penalty may apply if these unpaid taxes cannot be immediately collected from the business.

The trust fund recovery penalty may be imposed on all persons who are determined by the IRS to be responsible for collecting, accounting for, and paying these taxes, and who acted willfully in not doing so.

A “responsible person” can be an officer or employee of a corporation, an accountant, or a volunteer director/trustee. A responsible person also may include one who signs checks for the corporation or otherwise has authority to cause the spending of business funds. “Willfully” means voluntarily, consciously, and intentionally. A responsible person acts willfully if the person knows the required actions are not taking place.

B. INCOME AND DEDUCTIONS

Rules on income and deductions that apply to individuals also apply, for the most part, to corporations. However, some of the following special provisions apply only to corporations.

1. Below-Market Loans

A below-market loan is a loan on which no interest is charged or on which interest is charged at a rate below the applicable federal rate. A below-market loan generally is treated as an arm’s-length transaction in which the borrower is considered as having received both the following:

- A loan in exchange for a note that requires payment of interest at the applicable federal rate, and
- An additional payment.

2. Capital Losses

A corporation can deduct capital losses only up to the amount of its capital gains. In other words, if a corporation has an excess capital loss, it cannot deduct the loss in the current tax year. Instead, it carries the loss to other tax years and deducts it from capital gains that occur in those years.

First, the corporation can carry a net capital loss back three years. It is deducted from any total net capital gain that occurred in that year. If the corporation does not deduct the full loss, it can carry it forward one year (two years back) and then one more year (one-year back). If any loss remains, it can carry it over
to future tax years, one year at a time, for up to five years. When a net capital loss is carried to another tax year, it is treated as a short-term loss. It does not retain its original identity as long term or short term.

### Example

In 2016, a calendar year corporation has a net short-term capital gain of $3,000 and a net long-term capital loss of $9,000. The short-term gain offsets some of the long-term loss, leaving a net capital loss of $6,000. The corporation treats this $6,000 as a short-term loss when carried back or forward.

The corporation carries the $6,000 short-term loss back 3 years to 2013. In 2013, the corporation had a net short-term capital gain of $8,000 and a net long-term capital gain of $5,000. It subtracts the $6,000 short-term loss first from the net short-term gain. This results in a net capital gain for 2013 of $7,000. This consists of a net short-term capital gain of $2,000 ($8,000 - $6,000) and a net long-term capital gain of $5,000.

A corporation may not carry a capital loss from, or to, a year for which it is an S corporation.

When carrying a capital loss from one year to another, the following rules apply:

- When figuring the current year’s net capital loss, a corporation cannot combine it with a capital loss carried from another year. In other words, it can carry capital losses only to years that would otherwise have a total net capital gain;

- If a corporation carries capital losses from two or more years to the same year, it deducts the loss from the earliest year first; and

- A corporation cannot use a capital loss carried from another year to produce or increase a net operating loss in the year to which it carries it back.

### 3. Charitable Contributions

A corporation can claim a limited deduction for charitable contributions made in cash or other property. The contribution is deductible if made to, or for the use of, a qualified organization.

A corporation may not take a deduction if any of the net earnings of an organization receiving contributions benefit any private shareholder or individual.

#### a. Cash method corporation

A corporation using the cash method of accounting deducts contributions in the tax year paid.

#### b. Accrual method corporation

A corporation using an accrual method of accounting can choose to deduct unpaid contributions for the tax year the board of directors authorizes them if it pays them by the 15th day of the 3rd month after the
close of that tax year. The corporation makes the choice by reporting the contribution on the corporation’s return for the tax year. A copy of the resolution authorizing the contribution and a declaration stating that the board of directors adopted the resolution during the tax year must accompany the return. The declaration must include the date the resolution was adopted.

c. Limit

A corporation cannot deduct charitable contributions that exceed 10% of its taxable income for the tax year. Taxable income is figured for this purpose without the following:

- The deduction for charitable contributions;
- The deduction for dividends received;
- The deduction allowed under Section 249 of the Internal Revenue Code;
- The domestic production activities deduction;
- Any net operating loss carry-back to the tax year; and
- Any capital loss carry-back to the tax year.

d. Carryover of excess contributions

A corporation may carry over, within certain limits, to each of the subsequent five years any charitable contributions made during the current year that exceed the 10% limit. A corporation may lose any excess not used within that period. For example, if a corporation has a carryover of excess contributions paid in 2015 and it does not use all the excess on its return for 2016, it can carry the rest over to 2017, 2018, 2019 and 2020. A corporation does not deduct a carryover of excess contributions in the carryover year until after they deduct contributions made in that year (subject to the 10% limit). The corporations cannot deduct a carryover of excess contributions to the extent it increases a net operating loss carryover.

4. Corporate Preference Items

A corporation must make special adjustments to certain items before it takes them into account in determining its taxable income. These items are known as corporate preference items. For more information on corporate preference items, see § 291 of the Internal Revenue Code.

5. Dividends-Received Deduction

A corporation can deduct a percentage of certain dividends received during its tax year. This section discusses the general rules that apply.

a. Dividends from domestic corporations

A corporation can deduct, within certain limits, 70% of the dividends received if the corporation receiving the dividend owns less than 20% of the corporation distributing the dividend. If the corporation owns 20% or more of the distributing corporation’s stock, it can, subject to certain limits, deduct 80% of the dividends received.
b. Ownership

Determine ownership, for these rules, by the amount of voting power and value of the paying corporation’s stock (other than certain preferred stock) the receiving corporation owns.

c. Small business investment companies

Small business investment companies can deduct 100% of the dividends received from taxable domestic corporations.

d. Dividends from regulated investment companies

Regulated investment company dividends received are subject to certain limits. Capital gain dividends received from a regulated investment company do not qualify for the deduction. For more information, see section 854 of the Internal Revenue Code.

e. No deduction allowed for certain dividends

Corporations cannot take a deduction for dividends received from the following entities:

- A real estate investment trust (REIT);
- A corporation exempt from tax under section 501 or 521 of the Internal Revenue Code either for the tax year of the distribution or the preceding tax year;
- A corporation whose stock was held less than 46 days during the 90-day period beginning 45 days before the stock became ex-dividend with respect to the dividend. Ex-dividend means the holder has no rights to the dividend;
- A corporation whose preferred stock was held less than 91 days during the 180-day period beginning 90 days before the stock became ex-dividend with respect to the dividend if the dividends received are for a period or periods totaling more than 366 days; and
- Any corporation, if the corporation is under an obligation (pursuant to a short sale or otherwise) to make related payments with respect to positions in substantially similar or related property.

Dividends on deposits or withdrawable accounts in domestic building and loan associations, mutual savings banks, cooperative banks, and similar organizations are interest, not dividends. They do not qualify for this deduction.

The total deduction for dividends received or accrued is generally limited (in the following order) to:

- 80% of the difference between taxable income and the 100% deduction allowed for dividends received from affiliated corporations, or by a small business investment company, for dividends received or accrued from 20%-owned corporations, then
70% of the difference between taxable income and the 100% deduction allowed for dividends received from affiliated corporations, or by a small business investment company, for dividends received or accrued from less-than-20%-owned corporations (reducing taxable income by the total dividends received from 20%-owned corporations).

In figuring the limit, determine taxable income without the following items:

- The net operating loss deduction;
- The deduction for dividends received;
- Any adjustment due to the nontaxable part of an extraordinary dividend; and
- Any capital loss carryback to the tax year.

If a corporation has a net operating loss (NOL) for a tax year, the limit of 80% (or 70%) of taxable income does not apply. To determine whether a corporation has an NOL, figure the dividends-received deduction without the 80% (or 70%) of taxable income limit.

### Examples

**Example 1.** A corporation loses $25,000 from operations. It receives $100,000 in dividends from a 20%-owned corporation. Its taxable income is $75,000 ($100,000 - $25,000) before the deduction for dividends received. If it claims the full dividends-received deduction of $80,000 ($100,000 × 80%) and combines it with an operations loss of $25,000, it will have an NOL of ($5,000). Therefore, the 80% of taxable income limit does not apply. The corporation can deduct the full $80,000.

**Example 2.** Assume the same facts as in Example 1, except that the corporation only loses $15,000 from operations. Its taxable income is $85,000 before the deduction for dividends received. After claiming the dividends-received deduction of $80,000 ($100,000 × 80%), its taxable income is $5,000. Because the corporation will not have an NOL after applying a full dividends-received deduction, its allowable dividends-received deduction is limited to 80% of its taxable income, or $68,000 ($85,000 × 80%).

### 6. Extraordinary Dividends

If a corporation receives an extraordinary dividend on stock held two years or less before the dividend announcement date, it generally must reduce its basis in the stock by the nontaxed part of the dividend. The nontaxed part is any dividends-received deduction allowable for the dividends. An extraordinary dividend is any dividend on stock that equals or exceeds a certain percentage of the corporation’s adjusted basis in the stock. The percentages are 5% for stock preferred as to dividends or 10% for other stock.
Corporations should treat all dividends received that have ex-dividend dates within an 85-consecutive-day period as one dividend. Corporations should treat all dividends received that have ex-dividend dates within a 365-consecutive-day period as extraordinary dividends if the total of the dividends exceeds 20% of the corporation's adjusted basis in the stock.

Any dividend on disqualified preferred stock is treated as an extraordinary dividend regardless of the period of time the corporation held the stock. Disqualified preferred stock is any stock preferred as to dividends if any of the following apply.

- The stock when issued has a dividend rate that declines (or can reasonably be expected to decline) in the future;
- The issue price of the stock exceeds its liquidation rights or stated redemption price; or
- The stock is otherwise structured to avoid the rules for extraordinary dividends and to enable corporate shareholders to reduce tax through a combination of dividends-received deductions and loss on the disposition of the stock.

These rules apply to stock issued after July 10, 1989, unless it was issued under a written binding contract in effect on that date, and thereafter, before the issuance of the stock.

C. GOING INTO BUSINESS

When going into business, certain costs incurred to get the business started are treated as capital expenses. A corporation can choose to amortize certain costs over a period of 60 months or more. To qualify, the cost must be one of the following: (1) a business start-up cost, or (2) an organizational cost.

The costs and accounting treatment for starting up a business as a corporation are treated similarly to those for starting a partnership, as discussed earlier under “Partnerships.”

1. Costs of Organizing a Corporation

Amounts paid to organize a corporation are the direct costs of creating the corporation.

a. Qualifying costs

To qualify as an organizational cost, it must be:

- For the creation of the corporation,
- Chargeable to a capital account,
- Amortized over the life of the corporation if the corporation had a fixed life, and
- Incurred before the end of the first tax year in which the corporation is in business.

A corporation using the cash method of accounting can amortize organizational costs incurred within the first tax year, even if it does not pay them in that year.

Examples of organizational costs include:
• The cost of temporary directors.
• The cost of organizational meetings.
• State incorporation fees.
• The cost of legal services.

b. Nonqualifying costs

The following items are capital expenses that cannot be amortized:

• Costs for issuing and selling stock or securities, such as commissions, professional fees, and printing costs.

• Costs associated with the transfer of assets to the corporation.

See How to Amortize and How to Make the Election under “Partnerships,” earlier, for more information.

2. Related Persons

A corporation that uses an accrual method of accounting cannot deduct business expenses and interest owed to a related person who uses the cash method of accounting until the corporation makes the payment and the corresponding amount is includible in the related person’s gross income. Determine the relationship, for this rule, as of the end of the tax year for which the expense or interest would otherwise be deductible. If a deduction is denied under this rule, the rule will continue to apply even if the corporation’s relationship with the person ends before the expense or interest is includible in the gross income of that person. These rules also deny the deduction of losses on the sale or exchange of property between related persons.

For purposes of this rule, the following persons are related to a corporation:

• Another corporation that is a member of the same controlled group as defined in § 267(f) of the Internal Revenue Code;

• An individual who owns, directly or indirectly, more than 50% of the value of the outstanding stock of the corporation;

• A trust fiduciary when the trust or the grantor of the trust owns, directly or indirectly, more than 50% in value of the outstanding stock of the corporation;

• An S corporation if the same persons own more than 50% in value of the outstanding stock of each corporation;

• A partnership if the same persons own more than 50% in value of the outstanding stock of the corporation and more than 50% of the capital or profits interest in the partnership; and

• Any employee-owner if the corporation is a personal service corporation (defined later), regardless of the amount of stock owned by the employee-owner.
To determine whether an individual directly or indirectly owns any of the outstanding stock of a corporation, the following rules apply:

1) Stock owned, directly or indirectly, by or for a corporation, partnership, estate, or trust is treated as being owned proportionately by or for its shareholders, partners, or beneficiaries;

2) An individual is treated as owning the stock owned, directly or indirectly, by or for his or her family. Family includes only brothers and sisters (including half brothers and half sisters), a spouse, ancestors, and lineal descendants; and

3) Any individual owning (other than by applying rule (2)) any stock in a corporation is treated as owning the stock owned directly or indirectly by that individual’s partner.

To apply rule (1), (2), or (3), stock constructively owned by a person under rule (1) is treated as actually owned by that person. But stock constructively owned by an individual under rule (2) or (3) is not treated as actually owned by the individual for applying either rule (2) or (3) to make another person the constructive owner of that stock.

3. Personal Service Corporation

For this purpose, a corporation is a personal service corporation if it meets all of the following requirements:

1) It is not an S corporation;

2) Its principal activity is performing personal services. Personal services are those performed in the fields of accounting, actuarial science, architecture, consulting, engineering, health (including veterinary services), law, and performing arts;

3) Its employee-owners substantially perform the services in (2); and

4) Its employee-owners own more than 10% of the fair market value of its outstanding stock.

Where it is necessary to clearly show income or prevent tax evasion, the IRS can reallocate gross income, deductions, credits, or allowances between two or more organizations, trades, or businesses owned or controlled directly, or indirectly, by the same interests. The disallowance of losses from the sale or exchange of property between related persons does not apply to liquidating distributions.

4. U.S. Real Property Interest

If a domestic corporation acquires a U.S. real property interest from a foreign person or firm, the corporation may have to withhold tax on the amount it pays for the property. The amount paid includes cash, the fair market value of other property, and any assumed liability. If a domestic corporation distributes a U.S. real property interest to a foreign person or firm, it may have to withhold tax on the fair market value of the property. A corporation that fails to withhold may be liable for the tax, and any penalties and interest that apply.
V. SUBCHAPTER S CORPORATIONS

The essence of a subchapter S corporation is that its owners have the limited liability offered by a corporation and the pass-through taxation of a partnership or limited liability company. This can be particularly useful for closely-held corporations that expect to suffer a loss, particularly at the beginning of the business. Subchapter S status allows the loss to be passed through directly to the shareholder. This loss can be offset against gains from other activities, subject to the limitations of the passive-income and at-risk rules.

Some of the factors to consider when making a choice of entity that includes S corporation status include:

- The IRS treats a subchapter S corporation like a partnership for income tax purposes, but as a corporation for determining the tax treatment on dissolution;
- There are significant limits on who, and how many people, can have an ownership interest in an S corporation; and
- Failure to meet the strict statutory requirements for S corporation status can result in a retroactive loss of status and additional tax liabilities.

To be eligible for S corporation status, the corporation must first be duly organized under the laws of its state of organization. S corporation status must then be affirmatively elected by all shareholders. This election is made using Form 2553 and must be filed within the first two and one-half months of the taxable year of the corporation or at any time prior to that, but not more than one year. A late election is considered valid for the following year.

Once elected, income and deductions pass through to the shareholder in the same fashion as a partnership. However, special allocations available to a partnership (as discussed above) are not available to S corporations. This also holds true for losses, except that they are limited by the shareholders’ basis in corporate stock. This is similar to partnership losses, as discussed above. Likewise, capital gains pass through.

Subchapter S status may be terminated either voluntarily – through a vote of the shareholders – or involuntarily. Involuntary termination occurs whenever any of the preconditions for electing the status fail to exist any longer, i.e. when the maximum number of shareholders is exceeded or when a second class of stock is created or stock passes into the hands of an unqualified shareholder.

The holders of more than 50% of the stock may terminate the election voluntarily. No special form is required. Once an election has been terminated, the corporation may not again elect for the next four years, except under certain circumstances with the consent of the IRS.

A. RIGHT TO OFFSET OTHER INCOME

Because subchapter S corporation income and loss items pass through to the shareholders, losses can offset income generated from other activities by shareholders. The losses the subchapter S corporation generates may offset income generated by other activities, provided the shareholder’s basis in his or her stock is sufficient to permit the deduction of the loss.
B. TAX ON EXCESSIVE PASSIVE INVESTMENT INCOME

The tax on excessive passive investment income also applies only to subchapter S corporations that had a prior existence as subchapter C corporations. Excessive passive investment income may terminate the subchapter S election, but even if the IRS waives termination, this excess income will give rise to a corporate level tax at the normal corporate tax rate.
### CHAPTER 8: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

<p>| | |</p>

## CHAPTER 8: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

### 1.

<table>
<thead>
<tr>
<th>A. Incorrect. There is no categorical exclusion from self-employment tax for partners.</th>
</tr>
</thead>
<tbody>
<tr>
<td>B. <strong>CORRECT.</strong> Income of the business is passed through to the partners directly rather than first being taxed at the entity level as with corporations.</td>
</tr>
<tr>
<td>C. Incorrect. Being able to choose tax treatment is a characteristic of limited liability companies and not of partnerships.</td>
</tr>
<tr>
<td>D. Incorrect. The tax rate is not lower based on the business’s status as a partnership.</td>
</tr>
</tbody>
</table>

*(See page 153 of the course material.)*

### 2.

<table>
<thead>
<tr>
<th>A. Incorrect. Ten is far too low.</th>
</tr>
</thead>
<tbody>
<tr>
<td>B. Incorrect. There are currently many more states in the U.S. than this number that allow businesses to select one of these legal entity structures.</td>
</tr>
<tr>
<td>C. Incorrect. Forty is too low.</td>
</tr>
<tr>
<td>D. <strong>CORRECT.</strong> Today, all 50 states allow businesses to choose Limited Liability Company (LLC) status and Limited Liability Partnerships (LLP), which essentially allow all partners the protections of limited partner’s status in a general partnership.</td>
</tr>
</tbody>
</table>

*(See page 156 of the course material.)*

### 3.

<table>
<thead>
<tr>
<th>A. Incorrect. The operating agreement sets forth most of the rules governing an LLC, including the manner in which profits are distributed. However, this is not the most correct answer.</th>
</tr>
</thead>
<tbody>
<tr>
<td>B. Incorrect. This sort of pass-through taxation occurs when the LLC has elected to be taxed as a partnership. However, this is not the correct answer.</td>
</tr>
<tr>
<td>C. Incorrect. This means that if someone invested 80% of the capital, he or she would typically receive 80% of the profits. However, this is not the best answer.</td>
</tr>
<tr>
<td>D. <strong>CORRECT.</strong> All of the responses are correct.</td>
</tr>
</tbody>
</table>

*(See page 160 of the course material.)*
4. | A. Incorrect. Shareholders of a subchapter S corporation do enjoy limited liability and are subject to taxation in the same manner as a partnership.  
B. Incorrect. One of the hallmarks of the subchapter S corporation is pass-through taxation similar to partnerships.  
C. CORRECT. These are the two keys of subchapter S corporations. S corporations are also generally closely-held, as there are limits on who can be shareholders and how many shareholders there can be.  
D. Incorrect. To the contrary, there is a cap on the number of shareholders allowed.  
(See page 177 of the course material.)
I. ALTERNATIVE MINIMUM TAX BASICS

A. OVERVIEW AND HISTORY OF AMT

The Alternative Minimum Tax (AMT) is a parallel income tax originally designed to ensure that taxpayers with substantial economic income pay at least some minimum level of tax. However, the AMT was never intended to reach middle-income taxpayers nor to become the tax system applicable to most taxpayers.

To calculate the AMT, taxpayers first determine tax liability under the regular income tax, and then add back certain “preference” items to taxable income. After deducting an exemption amount under AMT, taxpayers pay whichever is higher under the regular income tax or AMT. Personal exemptions, the itemized deductions for state and local taxes, and miscellaneous itemized deductions together account for 90% of the preference items added back under the AMT, with state and local taxes representing almost half of that amount.

B. AMT EXEMPTION “PATCH” MADE PERMANENT BY 2012 TAX ACT

Congress approved a permanent AMT patch to take effect for tax years after December 31, 2012. This change indexes the exemption and phase-out amounts for future tax years.

C. CURRENT YEARS’ AMT

Internal Revenue Code §§ 55, 56, 57, 58, and 59 contain the current laws surrounding this computation. AMT is calculated by adjusting the taxpayer’s regular taxable income with a number of tax preference items and adjustments. Tax preference items are positive items increasing Alternative Minimum Taxable Income (AMTI) and are excluded from regular taxable income. Tax preference items include tax-exempt interest from certain private activity bonds, depletion, intangible drilling costs, accelerated depreciation on leased personal or real property placed in service before 1987, amortization of certain pollution control costs or facilities placed in service before 1987, and certain leased property subject to accelerated cost recovery.

Adjustments for AMT may result in positive and negative amounts and may have implications in subsequent tax years. Adjustments include standard or itemized deductions, personal exemptions, 1987 and subsequent-year depreciation based on the alternative depreciation system, amortization of research and experimental costs, amortization of mining exploration and development costs,
D. PROTECTING AMERICANS FROM TAX HIKES (PATH) ACT OF 2015

In late December 2015, the PATH Act became law. This law was effective retroactively to January 1, 2015 for many of its provisions. Some provisions were made permanent, while others were temporarily extended. The following provisions have an impact on the AMT:

• The deduction for state and local general sales taxes was made permanent.
• The tax-free distribution from IRAs to certain charities was made permanent.
• The increased section 179 deductions were made permanent.
• The exclusion of 100% of the gain on certain small business stock and the elimination of the AMT preference item were made permanent.
• Certain taxpayers are allowed to claim research credits from an “eligible small business” against the AMT.

Did you Know?

• The minimum tax was enacted into law in 1969 after Congress learned that 155 taxpayers with adjusted gross incomes (AGI) of $200,000 or more for the 1966 tax year had paid no federal tax at all.

• Prior to ATRA, the Joint Committee on Taxation projected that within the next decade, almost two million taxpayers with incomes as low as $30,000 would have to prepare the AMT schedule with their tax returns – if only to prove that they did not owe AMT.

• In tax year 2001, over 660,000 taxpayers with AGI under $200,000 paid more than $1.625 billion in AMT. The number of taxpayers with AGI of less than $50,000 owing AMT in 2001 is virtually the same as the number of taxpayers with AGI between $475,000 and $500,000 who owe no AMT.

• In 2010, it was estimated to cost less to repeal the regular income tax structure and keep the AMT ($74 billion) than to abolish the AMT ($85 billion).

• In 2012, prior to the ATRA bill, the AMT was projected to affect nearly 32 million taxpayers. The majority would have incomes under $100,000, and more than 36 percent of taxpayers with incomes between $50,000 and $75,000 would owe AMT.
Did You Know? (continued)

- Taxpayers must fill out a 12-line worksheet, read ten pages of instructions, and complete a 64-line form – only to find they owe little or no AMT after all. Other taxpayers must complete the 64-line form, even though they are not subject to the AMT, to substantiate their entitlement to certain tax credits.

- Taxpayers subject to the AMT must calculate their tax liability twice, once under regular income tax rules and again under AMT rules.

- Taxpayers lost the benefit of nearly 12 billion dollars in tax credits (such as business credits) in 2011 because of AMT (prior to the AMT “patch.”)

Changes to Note

- For 2016, the exemption amount has increased to $53,900 for single filers ($83,800 if married filing jointly or qualifying widow(er); $41,900 if married filing separately).

- The exemption amounts are adjusted annually for inflation. The 2017 exemption amounts are: $54,300 for single filers, $84,500 for married filers, and $42,250 for married filing separately.

- The maximum rate of 15% on net capital gains and qualified dividends has increased to 20% for some taxpayers.

- Beginning in 2014, the 20% tax rate on net long-term capital gains also applies for the AMT.

- Beginning in 2003, your alternative tax net operating loss deduction (ATNOLD) is generally limited to 90% of your alternative minimum taxable income (figured without regard to the ATNOLD).

- For 2016, the minimum exemption amount for a child subject to the “kiddie tax” is $7,400 ($7,500 for 2017).

- Beginning in 2004, you may benefit from income averaging on Schedule J (Form 1040) even if you owe the alternative minimum tax.

- In most cases, no adjustment is required for the deduction of qualified mortgage insurance premiums. But see the discussion later in the course.
Changes to Note (continued)

- For tax years beginning in 2008, individuals may offset their entire regular tax liability and AMT liability by the nonrefundable personal credits.
- Special rules apply in 2008 and subsequent years for depreciation of qualified disaster assistance property and for benefits received in certain disaster areas.
- The AMT is indexed annually for inflation beginning in 2013. The exemption amount, exemption phase-out starting point, and the start of the 28% AMT tax bracket are now indexed for inflation each year.

II. OTHER PROVISIONS THAT AFFECT AMT

A. KIDDIE TAX

Congress was concerned that some higher income individuals may have been transferring earnings to their children so that the earnings would be taxed at a lower rate. The TRA of 1986 offered a remedy to this potential inequity. The rules regarding the age of a child whose investment income may be taxed at the parent’s tax rate changed in 2008. These rules will continue to apply to a child under age 18 at the end of the year but, as of January 1, 2008, will also apply to a child who is age 18 at the end of the year, or a student under age 24 at the end of the year, whose earned income is not more than half of the child’s support.

The unearned income of a minor for taxable years beginning in 2015, the amount in § 1(g)(4)(A)(ii)(I), which is used to reduce the net unearned income reported on the child’s return that is subject to the “kiddie tax,” is $1,050. This amount is the same as the $1,050 standard deduction amount provided in section 3.02 of Revenue Procedure 2009-50.

The same $1,050 amount is used for purposes of § 1(g)(7) (that is, to determine whether a parent may elect to include a child’s gross income in the parent’s gross income and to calculate the “kiddie tax”). For example, one of the requirements for the parental election is that a child’s gross income is more than the amount referenced in § 1(g)(4)(A)(ii)(I) but less than 10 times that amount; thus, a child’s gross income for 2016 must be more than $1,050 but less than $10,500.

For 2016, for a child to whom the § 1(g) “kiddie tax” applies, the exemption amount under §§ 55 and 59(j) for purposes of the alternative minimum tax under § 55 may not exceed the sum of (1) the child’s earned income for the taxable year, plus (2) $7,400.
B. PARTNERSHIP AND S CORPORATION FLOW-THROUGHS

AMT pass-through items are required to be reported on each shareholder’s or partner’s tax return. The allocation for these items should follow the regular tax allocation rules.

**Example**

An S corporation is made up of two individuals, Sally and George, each 50-percent shareholders. Each shareholder would report 50-percent of the income or loss (disregarding the basis, passive and at-risk rules) on their individual returns. If the S corporation has AMT tax preference items or adjustments, these will be computed at the S corporation level and divided by percentage of ownership between the shareholders. If the S corporation had a regular depreciation of $2,000 and AMT depreciation of $1,000, of the $1,000 AMT adjustment, $500 would be allocable to each 50-percent partner. This figure is then reported on the depreciation adjustment line of Form 6251 and is added with the shareholder’s other AMT adjustment and preference items.

C. AT-RISK RULES AND BASIS LIMITATIONS

Per IRC § 59(h), the at-risk rules of IRC § 465 and basis limitation rules of IRC § 704(d) and IRC § 1366(d) require a separate computation of allowable deductions.

**Example**

Wendy has a property for which she is at risk for $1,000. For regular tax purposes, if her deductions exceed the $1,000 she will not be allowed to take these amounts and will have a suspended loss. If, however, for AMT purposes the deductions are less than $1,000 then she will have unused at-risk for AMT purposes.

It is therefore important to keep separate records regarding the at-risk amount (as well as any basis limitations) for regular tax purposes and for AMT purposes.

D. ESTIMATED TAX PAYMENTS

For purposes of making estimated tax payments per IRC § 6654, the taxpayer’s AMT liability must be considered and included in the taxpayer’s computations regarding estimated payments.

E. SHORT TAX YEARS

AMT computed for a short taxable year requires a taxpayer to annualize AMT taxable income (multiply by 12 and divide by number of months in the short year). Then multiply the resulting tentative AMT by a fraction which is the number of months in the short year divided by 12.
III. MINIMUM TAX CREDIT

A. MINIMUM TAX CREDIT/GENERAL RULES

The Minimum Tax Credit (MTC) is the difference between the AMT computed “with exclusion and deferral items” in the usual manner and the AMT computed using only exclusion items or “without deferral preferences.” The MTC is carried forward (no carrybacks are allowed) to the next year and can reduce only the excess of the regular tax (reduced by all other nonrefundable credits) over the tentative minimum tax in a subsequent year. If all of the credit is not used in the subsequent year, it is aggregated in future years and becomes part of the MTC for that year. This credit is carried forward indefinitely until used in full.

The MTC is computed only on deferral items. IRC § 53(d)(1)(B)(ii) lists the “exclusion” amounts which are not allowed in the computation of MTC. These exclusion items include adjustment for miscellaneous itemized deductions and certain taxes (IRC § 56(b)(1)), depletion preference (IRC § 57(a)(1)), tax-exempt interest on private activity bonds (IRC § 57(a)(5)), and the exclusion for gains on sale of certain small business stock (IRC § 57(a)(7)). All other AMT adjustments and preference items are deferral items and are included in the computation of the MTC.

**Examples**

*Example 1.* Don and Tanya file a married filing joint return for 2016. They have taxable income of $80,000 and a regular tax liability of $6,000. They have deferral items of $40,000 and exclusion items of $30,000. The MTC carryforward to 2017 is computed as follows:

AMT with both deferral items and exclusion items:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Regular Taxable Income</td>
<td>$80,000</td>
</tr>
<tr>
<td>Deferral Items</td>
<td>$40,000</td>
</tr>
<tr>
<td>Exclusion Items</td>
<td>$30,000</td>
</tr>
<tr>
<td>AMT Exemption</td>
<td>($83,800)</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>$66,200</strong></td>
</tr>
<tr>
<td>@ 26%</td>
<td></td>
</tr>
<tr>
<td>Tentative Minimum Tax</td>
<td>$17,212</td>
</tr>
<tr>
<td>Regular Tax</td>
<td>($6,000)</td>
</tr>
<tr>
<td>Net Minimum Tax</td>
<td>$11,212</td>
</tr>
</tbody>
</table>
Examples (continued)

AMT with only exclusion items or “without deferral items”:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Taxable Income</td>
<td>$ 80,000</td>
</tr>
<tr>
<td>Exclusion Items</td>
<td>$ 30,000</td>
</tr>
<tr>
<td>Exemption</td>
<td>($ 83,800)</td>
</tr>
<tr>
<td></td>
<td>$26,200</td>
</tr>
<tr>
<td>@ 26%</td>
<td></td>
</tr>
<tr>
<td>Tentative Minimum Tax</td>
<td>$ 6,812</td>
</tr>
<tr>
<td>Regular Tax</td>
<td>($6,000)</td>
</tr>
<tr>
<td>Net Minimum Tax</td>
<td>$ 812</td>
</tr>
</tbody>
</table>

MTC is to be carried over to 2017 is $10,400 ($11,212 - 812). The amount of this credit to be used in 2017 is limited to the amount that the taxpayers’ regular tax exceeds their tentative minimum tax for 2017.

**Example 2.** Assume that in 2017 Don and Tanya have a regular tax liability of $25,000 and a minimum tax of $20,000. The amount of MTC available for Don and Tanya for 2017 is $5,000, (the difference between the regular tax liability of $25,000 and the tentative minimum tax of $20,000). The remaining $5,400 ($10,400 - $5,000) is carried forward and used in future tax years.

In certain circumstances, such as the sale of depreciable property or assets nearing the end of their depreciable life (where the straight-line AMT adjustment exceeds the accelerated method), a negative MTC adjustment may result. The following example illustrates this point.
### Example

Jim and Marsie file a joint tax return for the current year. Their regular taxable income is $111,750. They had deferral items (depreciation) of ($10,000) and exclusion items of $60,000.

AMT with both exclusion and deferral items:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Regular Taxable Income</td>
<td>$ 111,750</td>
</tr>
<tr>
<td>AMT Deferral Items</td>
<td>($ 10,000)</td>
</tr>
<tr>
<td>AMT Exclusion Items</td>
<td>$ 60,000</td>
</tr>
<tr>
<td>AMTI with Deferrals and Exclusions</td>
<td>$161,750</td>
</tr>
<tr>
<td>Exemption</td>
<td>($ 83,800)</td>
</tr>
<tr>
<td>AMTI with Deferrals and Exclusions</td>
<td>$77,950</td>
</tr>
<tr>
<td>Tentative Minimum Tax</td>
<td>$ 20,267</td>
</tr>
<tr>
<td>Regular Tax</td>
<td>($ 19,215)</td>
</tr>
<tr>
<td>Net Minimum Tax</td>
<td>$ 1,052</td>
</tr>
</tbody>
</table>

AMT using exclusion items only or “without deferral items”:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Regular Taxable Income</td>
<td>$ 111,750</td>
</tr>
<tr>
<td>AMT Exclusion Items</td>
<td>$ 60,000</td>
</tr>
<tr>
<td>AMTI with Exclusion Items</td>
<td>$171,750</td>
</tr>
<tr>
<td>Exemption</td>
<td>($ 83,800)</td>
</tr>
<tr>
<td>AMTI with Exclusion Items</td>
<td>$87,950</td>
</tr>
<tr>
<td>Tentative Minimum Tax</td>
<td>$22,867</td>
</tr>
<tr>
<td>Regular Tax</td>
<td>($19,215)</td>
</tr>
<tr>
<td>Net Minimum Tax</td>
<td>$ 3,652</td>
</tr>
</tbody>
</table>

Difference between AMT with exclusions and deferrals $1,052 and AMT with exclusion items only $3,652 is ($2,600). This negative amount will offset prior positive credits generated in the earlier years of the asset’s life when the accelerated depreciation exceeds the AMT depreciation.

This computation shows once again the importance of the taxpayer keeping separate books for regular and AMT purposes.

### B. MINIMUM TAX CREDIT NET OPERATING LOSS (MTCNOL)

When computing the NOL for MTC purposes (known as MTCNOL), the NOL for the exclusion items only or without deferral items should be computed using only the exclusion items. IRC § 53(d)(1)(B)(i)(II) further states that this amount will not be subject to the ninety percent limitation of tax per IRC § 59(a)(2) (relating to foreign tax credit). If a taxpayer used a carryback of an AMTNOL to reduce a prior year’s
AMT liability and the prior year’s AMT liability generated a MTC which was carried forward and used, the taxpayer will have to recapture the MTC in the year in which it was used.

C. MINIMUM TAX CREDIT AND AMT FOREIGN TAX CREDIT

As previously discussed under the MTCNOL, the 90-percent limitation of taxable income does not exist when computing the FTC for AMT with exclusion items only.

Example

If tentative income tax before credits for both AMT with deferrals and exclusions and AMT with exclusions only is $34,000, and the FTC is $40,000, the FTC allowed for AMT with deferrals and exclusions would be limited to 90 percent or $30,600. When computing the FTC for AMT with exclusions only, the 90-percent limitation does not apply. Thus, the full $34,000 can be offset by the FTC. In this example, there would be an MTC of $3,400.

D. SPECIAL RULES

In the limited circumstances when a taxpayer has a nonconventional fuel credit under IRC § 29, special MTC provisions can apply. For regular tax purposes, such fuel credit is usually limited to the excess of a taxpayer’s regular tax over the tentative minimum tax. If this regular tax limitation causes a taxpayer to lose the benefit of a portion of the fuel credit, the taxpayer is allowed to increase the MTC by the disallowed credit amount. IRC section 53(d)(1)(B)(iii).

For example, a taxpayer who cannot use $5,000 of his non-conventional fuel credit due to the IRC § 29(b)(6)(B) limitation can increase his or her MTC by $5,000. A similar rule for the non-conventional fuel credit is provided for the orphan drug credit and the qualified electric vehicle credit.

E. COMPUTING THE MINIMUM TAX CREDIT

The computation of the MTC is completed by taxpayers on Form 8801, Credit for Prior Year Minimum Tax-Individuals, Estates, and Trusts. Form 8801 should be filed for each year that a taxpayer had a MTC carryover.

IV. HOW THE AMT IS CALCULATED

The AMT is a separate system from the regular income tax, with unique rules governing the recognition of income and the timing of deductions and credits. Taxpayers are often required to maintain two sets of records – one for regular income tax purposes and one for AMT purposes.

The determination of AMT liability, if any, is complex:
• First, the taxpayer must calculate his or her regular tax liability. The regular income tax rules provide preferred treatment for certain types of income and allow taxpayers to claim certain exemptions, deductions, exclusions and credits;

• Second, the taxpayer must determine whether he or she is subject to additional tax under the AMT regime. The IRS has developed a 12-line worksheet (Worksheet To See If You Should Fill in Form 6251) to help taxpayers determine whether they may be subject to the AMT. If the worksheet indicates that a taxpayer is potentially subject to the AMT, the taxpayer must complete Form 6251 (Alternative Minimum Tax – Individuals), which contains 64 lines. Many taxpayers are required to complete Form 6251 – only to find that they do not have an AMT liability;

• Third, the taxpayer must compute his or her alternative minimum taxable income (AMTI) on Form 6251. This computation generally requires taxpayers to give up the benefit of tax preference items to which they are entitled under the regular tax system (e.g., dependence exemptions, a standard deduction, and itemized deductions for state and local taxes, employee business expenses and legal fees);

• Fourth, the taxpayer must determine an “exemption amount” to which he is entitled based on filing status;

• Fifth, the taxpayer must compute his “taxable excess” by subtracting his exemption amount from his AMTI;

• Sixth, a taxpayer with a positive “taxable excess” must compute his “tentative minimum tax.” A “taxable excess” of $186,300 (2015) or less is taxed at a 26 percent rate and any additional “taxable excess” is taxed at a 28 percent rate. (The total amount is the tentative minimum tax);

• Seventh, the taxpayer must compute his “alternative minimum tax” or “AMT.” The AMT is equal to the excess of the taxpayer’s tentative minimum tax, if any, over his regular tax liability (reduced by any tax from Form 4972 (Tax on Lump Sum Distributions) and any foreign tax credit from Form 1040). If the net result is a negative number or zero, the taxpayer does not owe AMT;

• Eighth, if the taxpayer owes AMT, he computes his final tax liability by adding his regular tax liability and his AMT liability.

The “exemption amount” described above replaces the standard deduction and personal exemptions for purposes of computing the AMT. Congress increased the exemption amounts in 2016 to $83,800 for married individuals filing jointly and $53,900 for most other taxpayers. The exemption amount is phased out for married taxpayers with AMTI exceeding $159,700 and non-married taxpayers with AMTI exceeding $119,700.
A taxpayer who is subject to the AMT accrues AMT credits. However, these credits may be applied only to timing items – not to exclusion items. Timing items are those that are accounted for in different tax years in the regular tax and AMT systems. For example, the AMT in some instances requires taxpayers to depreciate property over a longer period of time. Exclusion items are adjustments and tax preference items that result in the permanent disallowance of certain tax benefits such as the standard deduction, personal exemptions and certain itemized deductions. In addition, AMT credits can only be used when the regular tax liability reduced by other non-refundable credits exceeds the tentative minimum tax for the tax year.

To claim AMT credits, taxpayers must complete Form 8801 (Credit For Prior Year Minimum Tax – Individuals, Estates, and Trusts), which the IRS estimates will take more than six hours.
THIS PAGE INTENTIONALLY LEFT BLANK.
### CHAPTER 9: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

1. **Which of the following groups was the original target of the alternative minimum tax:**
   - A. middle income earners
   - B. persons with substantial income
   - C. the working poor
   - D. wealthy retirees

2. **What is the first step a taxpayer must take in determining if he or she is liable for AMT:**
   - A. completion of the IRS’s 12-line AMT worksheet
   - B. calculation of his or her regular tax liability
   - C. computation of the AMT on Form 6251
   - D. determine his or her exemption amount based upon his or her filing status
**CHAPTER 9: SOLUTIONS AND SUGGESTED RESPONSES**

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

1.  
   A. Incorrect. Although this group is often hit with the AMT, it was not intended to reach this group when enacted.
   
   B. **CORRECT.** Congress wanted to ensure that this group did not avoid paying taxes through exclusions, deductions or other means.
   
   C. Incorrect. To the contrary, the law was aimed at those with very high incomes.
   
   D. Incorrect. Only those with significant income were targeted, not the retired who were already wealthy.
   
   *(See page 183 of the course material.)*

2.  
   A. Incorrect. Completion of the IRS AMT worksheet is the second, not the first step in the analysis.
   
   B. **CORRECT.** The regular income tax rules include preferred treatment for certain income and provide for specified exclusion, deduction and credits which must first be calculated.
   
   C. Incorrect. Making the computation on Form 6251 is later in the process.
   
   D. Incorrect. Determining the exemption is a much later step.
   
   *(See page 192 of the course material.)*
Marriage and divorce can result in many changes to an individual’s financial goals and plans. It is therefore important to understand the rules affecting the classification of marital property and how the life-changing events of both marriage and divorce can affect things such as ownership of assets and income tax liabilities.

I. DISTINGUISHING COMMUNITY AND SEPARATE PROPERTY

A. DEFINING COMMUNITY PROPERTY

Community property is a classification-based system that divides all marital assets into one of two categories:

• Community Property; and

• Separate Property.

1. Community Property

The general rule is that all property, real or personal, wherever situated, acquired by a married person during the marriage while domiciled in a community property state is community property. The law in community property states generally creates a presumption that any property acquired during the course of a marriage is community property.

This presumption places the burden of proof on the party challenging such a classification to come up with evidence to show that the property in question should be classified as separate property. Such evidence includes:

• Showing that the property was acquired by gift, devise, or bequest;

• Tracing the property to separate property assets; or

• Showing a clear agreement between the parties regarding the nature of the property.

The law may differ somewhat in each community property state. Also remember that the term “property” refers to both real and personal property of all types, including stocks, bonds, jewelry and cash.
B. SEPARATE PROPERTY

Simply put, property which is not community property is separate property. This includes property acquired prior to marriage and not gifted to the community, inheritances received during the marriage (so long as they are not subsequently commingled) and certain insurance proceeds. Remember that the laws in each community property state may be different. In most cases, separate property will include the following:

- All property owned by the person before marriage;
- All property acquired by the person after marriage by gift, bequest, devise, or descent; and
- The rents, issues, and profits of the property described in this section.

In addition, the earnings and accumulations of a spouse and the minor children living with, or in the custody of, the spouse, while living separate and apart from the other spouse are the separate property of that spouse.

1. Determining Date of Separation

The date of separation for the purposes of determining the character of property is established when either of the parties does not intend to resume the marriage and his or her actions bespeak the finality of the marital relationship.

2. Presumed Gift

Where one party contributes a separate asset to the community, it is presumed to be a gift to the community and will not be reimbursed unless there was an agreement which can be shown to the contrary.

3. Separate Property Business

A separate property business that is improved and grows in value through the marriage is divisible upon divorce. In deciding how much of the business belongs to the community and how much is still classified as separate property depends on how much time the owner spouse spent on the business during the course of the marriage. Where the value of the business increased largely due to the efforts of the spouse during the marriage, more of the business will be considered community property at the time of divorce.

Examples

Example 1. Hal owned a successful investment company at the time he met and married Sarah. After they were married, Hal worked full-time at the company. After 20 years of marriage, Hal filed for divorce. Under these facts, a large portion of the value of the business will be considered community property.
Examples (continued)

Example 2. Lara was a CPA who also owned a 35 percent share of a local restaurant at the time she met and married Lawrence. Lara was a silent partner in the restaurant and continued her job as a CPA during the entire course of the 10-year marriage. Lawrence filed for divorce. The court is not likely to consider much of the restaurant ownership to be community property since Lara did not spend much of her time during the marriage working on the investment.

4. Management and Control

Each spouse has management control of the community property to the same degree he or she has control of his or her own separate property. If the parties want to alter their community property rights, such agreement must be executed in writing.

5. Change of Form

The original characterization of the property as community or separate does not change although the property may change its form.

Example

Bill and Marci have been married for 10 years. In recognition of his five years of service at his place of employment, Bill receives a $5,000 bonus. The money is received as compensation for his services rendered during the course of the marriage and therefore is community property. Bill takes the $5,000 and opens a brokerage account. He uses the funds to purchase shares of Microsoft. The shares are community property, even if the brokerage account is in his name only.

C. COMMUNITY PROPERTY STATES

The following are community property states:

• Alaska;
• Arizona;
• California;
• Idaho;
• Louisiana;
• Nevada;
• New Mexico;
Texas;

Washington; and

Wisconsin.

*Alaska state law allows a “community property” election if consented to by both husband and wife with regards to federal tax treatment of income or property.

Whether a person has community property and community income depends on the state where he or she is domiciled. Each individual has only one domicile, regardless of the number of homes each person owns or occupies. A person’s domicile is defined as the permanent legal home that he or she intends to use for an indefinite or unlimited period, and to which, when absent, he or she intends to return. The question of domicile is therefore largely a matter of intent.

Persons must be prepared to show with facts that he or she intends a given place or state to be their permanent home. If a person moves into or out of a community property state during the year, he or she may or may not have community income. Factors considered in determining domicile include:

- Where the individual pays state income tax;
- Where the individual votes;
- Location of property he or she owns;
- Citizenship;
- Length of residence; and
- Business and social ties to the community.

The amount of time spent in one place does not always explain the difference between home and domicile. A temporary home or residence may continue for months or years while a domicile may be established the first moment a person occupies the property. A person’s intent is the determining factor in proving where he or she is domiciled.

**D. PRENUPTIAL AGREEMENTS**

A prenuptial agreement is nothing more than a contract between two persons that governs the distribution of marital assets at the time of dissolution rather than the state’s laws. They are generally enforceable so long as they comply with the laws governing enforcement of contracts. However, prenuptial agreements are not generally valid if the party against whom enforcement of the contract is being sought is able to prove that:

- The party did not execute the agreement *voluntarily*; and
- The agreement was *unconscionable* and all of the following apply:
  - He or she was not provided disclosure of the property of the other;
He or she did not voluntarily waive, in writing, any right to the disclosure;
He or she did not have an adequate knowledge of the property of the other; and
The agreement is against public policy by encouraging, facilitating or promoting divorce or dissolution.

E. MISCELLANEOUS ISSUES

1. Installment and Credit Acquisitions

When one spouse before marriage executes an installment contract to purchase property and then uses community funds after marriage to pay some of the installment, the community property is entitled to an interest in such property in the proportion that community funds were used for installments.

If one spouse acquires property on credit during the marriage, it is presumed to be community property. To rebut this presumption, the courts will consider the intent of the lender. If the lender intended to extend the credit based on the separate assets of one spouse, the property will be characterized as separate.

2. Personal Injury Damage Awards

The money received is community property if the injury occurs during the marriage, however, upon separation the funds received from personal injury awards shall be assigned entirely to the party who suffered the injury.

There is no offset to the community property for funds awarded to the separate property of the injured party.

3. Pension Plans and Retirement

Pensions are divisible whether they are vested or not. The funds will be apportioned between those that were accumulated or earned during the marriage and those that were earned before or after the end of the marriage.

II. FEDERAL TAXATION: COMMUNITY OR SEPARATE PROPERTY INCOME

A. DETERMINING THE CHARACTER OF ASSETS

The laws of the state in which a person is domiciled generally govern whether he or she has community property and community income or separate property and separate income for federal tax purposes. Table 10-1, later, summarizes the general rules.
B. COMMUNITY PROPERTY LAWS DISREGARDED

1. Certain Community Income

Community property laws may not apply to an item of community income. An individual is responsible for reporting all of it if:

- The individual treats the item as if only he or she is entitled to the income, and
- The individual does not notify his or her spouse of the nature and amount of the income by the due date for filing the return (including extensions).

2. Relief from Separate Return Liability for Community Income

Individuals are not responsible for reporting an item of community income if all the following conditions exist:

- They file a separate return for the tax year;
- They do not include an item of community income in gross income on their separate return;
- They establish that they did not know of, and had no reason to know of, that community income; and
- Under all facts and circumstances, it would not be fair to include the item of community income in the person’s gross income.

3. Equitable Relief

Persons who were married and filed a separate return in a community property state and are now liable for an underpayment or understatement of tax may request equitable relief if they believe the liability belongs to his or her spouse or former spouse.

4. Spousal Agreements

In some states a husband and wife may enter into an agreement that affects the status of property or income as community or separate property. CPAs and tax preparers should refer to individual state law to determine how it might affect their clients.

5. Nonresident Alien Spouse

If an individual is a United States citizen or resident and chooses to treat his or her nonresident alien spouse as a U.S. resident for tax purposes and is domiciled in a community property state or country, community property rules apply. In such cases, the couple must file a joint return for the year such a choice is made. Separate returns can be filed for later years.
If an individual is a U.S. citizen or resident and chooses not to treat his or her nonresident alien spouse as a U.S. resident for tax purposes, community property income is treated in the manner described below in the section covering spouses living apart all year. However, the person need not meet the conditions outlined in that section.

C. SPOUSES LIVING APART ALL YEAR

If a person is married at any time during the calendar year, special rules apply for reporting certain community income. Persons must meet all the following conditions for these special rules to apply:

- The individual and his or her spouse lived apart all year;
- The individual and his or her spouse did not file a joint return for a tax year beginning or ending in the calendar year;
- The individual and/or his or her spouse had earned income for the calendar year that is community income; and
- The individual and his or her spouse did not transfer, directly or indirectly, any of the earned income between themselves before the end of the year. They should not take into account transfers of very small amounts or value, or a payment or transfer to or for any dependent child, even though the payment or transfer satisfies an obligation of support imposed on the spouse.

TABLE 10-1. GENERAL RULES – PROPERTY AND INCOME: COMMUNITY OR SEPARATE?

<table>
<thead>
<tr>
<th>Community property is property:</th>
<th>Separate property is:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• That an individual, his or her spouse, or both acquire during their marriage while they are domiciled in a community property state. This includes the part of the property bought with community property funds if part was bought with community funds and part with separate property funds;</td>
<td>• Property that an individual or his or her spouse owned separately before marriage;</td>
</tr>
<tr>
<td>• That an individual and his or her spouse agreed to convert from separate to community property; and</td>
<td>• Money earned while domiciled in a non-community property state;</td>
</tr>
<tr>
<td>• That cannot be identified as separate property.</td>
<td>• Property either of the spouses were given or inherited separately during their marriage;</td>
</tr>
<tr>
<td></td>
<td>• Property bought with separate funds, or exchanged for separate property, during the marriage;</td>
</tr>
<tr>
<td></td>
<td>• Property that an individual and his or her spouse agreed to convert from community into separate property in an agreement valid under state law; and</td>
</tr>
<tr>
<td></td>
<td>• The part of property bought with separate funds, if part was bought with separate funds and part with community funds.</td>
</tr>
</tbody>
</table>
Community income is income from:

- Community property.
- Salaries, wages, or other pay received for services performed by an individual, his or her spouse, or both during their marriage while domiciled in a community property state.
- Real estate that is treated as community property under the laws of the state where the property is located.

Separate income is income from:

- Separate property which belongs to the spouse who owns the property.

1 In Idaho, Louisiana, Texas, and Wisconsin, income from most separate property is community income.

If all these conditions are met, an individual and their spouse must report community income.

1. Earned Income

Treat earned income that is not trade or business or partnership income as the income of the spouse who performed the services. Earned income means wages, salaries, professional fees, and other pay for personal services. Earned income does not include amounts paid by a corporation that are a distribution of earnings and profits rather than a reasonable allowance for personal services rendered.

2. Trade or Business Income

Treat income and related deductions from a trade or business that is not a partnership as those of the person carrying on the trade or business.

3. Partnership Income or Loss

Treat income or loss from a trade or business carried on by a partnership as the income or loss of the spouse who is the partner.

4. Separate Property Income

Treat income from the separate property of one spouse as the income of that spouse.

5. Social Security Benefits

Treat social security benefits received during the year, including the social security equivalent portion of tier 1 railroad retirement benefits, as the separate income of the spouse who received them.

6. Other Income

Treat all other community income, such as dividends, interest, rents, royalties, or gains, according to the community property laws of the individual’s state or country.
Example

Daniel and Sharon were married throughout the year but did not live together at any time during the year. Both were domiciled in Texas, a community property state. They did not file a joint return or transfer any earned income between themselves. During the year their incomes were as follows:

<table>
<thead>
<tr>
<th></th>
<th>Daniel</th>
<th>Sharon</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wages</td>
<td>$20,000</td>
<td>$22,000</td>
</tr>
<tr>
<td>Consulting business fees</td>
<td>5,000</td>
<td></td>
</tr>
<tr>
<td>Partnership income</td>
<td></td>
<td>10,000</td>
</tr>
<tr>
<td>Dividends from separate property</td>
<td>1,000</td>
<td>2,000</td>
</tr>
<tr>
<td>Interest from community property</td>
<td>500</td>
<td>500</td>
</tr>
<tr>
<td>Total</td>
<td>$26,500</td>
<td>$34,500</td>
</tr>
</tbody>
</table>

Under Texas community property laws, all of Daniel and Sharon’s income is considered community income. Sharon did not take part in Daniel’s consulting business.

Ordinarily, Daniel and Sharon would each report half the total community income, $30,500 [($26,500 + $34,500) ÷ 2], on their separate returns. But because they meet the four conditions discussed earlier, they must disregard community property law when reporting their income, except the interest from community property. They should report on their separate returns only their own earnings and other income and their share of the interest from community property. Daniel reports $26,500 and Sharon reports $34,500.

D. END OF THE MARITAL COMMUNITY

The marital community may end in several ways. When the marital community ends, the community assets (money and property) are divided between the spouses.

1. Death of Spouse

In community property states, each spouse usually is considered to own half the estate (excluding separate property). If one spouse dies, the total fair market value (FMV) of the community property, including the part that belongs to the surviving spouse, generally becomes the basis of the entire property. For this rule to apply, at least half the value of the community property interest must be includible in the decedent spouse’s gross estate, whether or not the estate must file a return.
Example

Bob and Ann owned community property that had a basis of $80,000. When Bob died, his and Ann’s community property had an FMV of $100,000. At least half their community interest was includible in Bob’s estate. The basis of Ann’s half of the property is $50,000 after Bob died (one half of the $100,000 FMV). The basis of the other half to Bob’s heirs is also $50,000.

Note

The above basis rule does not apply if the spouse died in 2010 and the spouse’s executor elected out of the estate tax, in which case section 1022 will apply.

2. Divorce or Separation

The division of community property in connection with a divorce or property settlement does not result in a gain or loss. Each spouse is taxed on half the community income for the part of the year before the community ends. Any income received after the marital community ends is separate income. This separate income is taxable only to the spouse to whom it belongs.

An absolute decree of divorce or annulment ends the marital community in all community property states. A decree of annulment, even though it holds that no valid marriage ever existed, usually does not nullify community property rights arising during the so-called marriage.

A decree of legal separation or of separate maintenance may or may not end the marital community. The court in the state issuing the decree may terminate the marital community and divide the property between the spouses.

A separation agreement may divide the community property between spouses. It may provide that this property along with future earnings and property acquired will be separate property. Such an agreement may end the community. In some states, the marital community ends when the husband and wife permanently separate, even if there is no formal agreement.

E. FEDERAL INCOME TAX RETURN PREPARATION

The following discussion does not apply to spouses who meet the conditions under spouses living apart all year, discussed earlier. Those spouses must report their community income.
1. **Joint Return Versus Separate Returns**

Ordinarily, filing a joint return will give a couple the greater tax advantage. But in some cases, the couple’s combined income tax on separate returns may be less than it would be on a joint return. If a couple elects to file separate returns, the other spouse:

- Should itemize deductions if their spouse itemizes deductions, because they cannot claim the standard deduction;
- Cannot take the credit for child and dependent care expenses in most instances;
- Cannot take the earned income credit;
- Cannot exclude any interest income from U.S. savings bonds that they used for higher education expenses;
- Cannot take the credit for the elderly or the disabled unless they lived apart from each other all year;
- May have to include in income more of the social security benefits (including any equivalent railroad retirement benefits) they received during the year than they would on a joint return;
- Cannot deduct interest paid on a qualified student loan;
- Cannot take the education credits;
- May have a smaller child tax credit than they would on a joint return; and
- Cannot take the exclusion or credit for adoption expenses in most instances.

Individuals should calculate their tax both on a joint return and on separate returns under the community property laws of their state. Individuals can then compare the tax figured under both methods and use the one that results in less tax.

If the couple files separate returns, each spouse must report half of their combined community income and deductions in addition to each individual’s separate income and deductions. Each spouse should list only their share of the income and deductions on the appropriate lines of their separate tax returns (wages, interest, dividends, etc.).

**F. IDENTIFYING INCOME AND DEDUCTIONS**

To figure the best way to file a return – jointly or separately – individuals first identify the community and separate income and deductions according to the laws of the applicable state.
Community income exempt from federal tax generally keeps its exempt status for both spouses. For example, under certain circumstances, income earned outside the United States is tax exempt. If an individual earned income and met the conditions that made it exempt, the income is also exempt for their spouse even though he or she may not have met the conditions.

1. Military Retirement Pay

State community property laws apply to military retirement pay. Generally, the pay is either separate or community income based on the marital status and domicile of the couple while the member of the Armed Forces was in active military service.

Pay earned while married and domiciled in a community property state is community income. This income is considered to be received half by the member of the Armed Forces and half by the spouse.

2. Civil Service Retirement

For income tax purposes, community property laws apply to annuities payable under the Civil Service Retirement Act (CSRS) or Federal Employee Retirement System (FERS).

Whether a civil service annuity is separate or community income depends on the marital status and domicile of the employee when the services were performed for which the annuity is paid. Even if you now live in a non-community property state and you receive a civil service annuity, it may be community income if it is based on services performed while married and domiciled in a community property state.

If a civil service annuity is a mixture of community income and separate income, it must be divided between the two kinds of income. The division is based on the employee’s domicile and marital status in community and non-community property states during his or her periods of service.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
</table>

Henry Wright retired this year after 30 years of civil service. He and his wife were domiciled in a community property state during the past 15 years. Since half the service was performed while the Wrights were married and domiciled in a community property state, half the civil service retirement pay is considered to be community income. If Mr. Wright receives $1,000 a month in retirement pay, $500 is considered community income - half ($250) is his income and half ($250) is his wife’s.

3. Lump-Sum Distributions

If an individual was born before January 2, 1936 and received a lump-sum distribution from a qualified retirement plan, he or she may be able to choose an optional method of figuring the tax on the distribution. For the 10-year tax option, he or she must disregard community property laws.
4. **Gains and Losses**

Gains and losses are classified as separate or community depending on how the property is held. For example, a loss on separate property, such as stock held separately, is a separate loss. On the other hand, a loss on community property, such as a casualty loss to an individual’s home held as community property, is a community loss.

5. **Business and Investment Expenses**

If separate returns are filed, expenses incurred to earn or produce:

- Community business or investment income are generally divided equally between spouses. Each spouse is entitled to deduct one-half of the expenses on their separate returns, or
- Separate business or investment income are deductible by the spouse who earns the income.

Other limits may also apply to business and investment expenses.

6. **Personal Expenses**

Expenses that are paid out of separate funds, such as medical expenses, are deductible by the spouse who pays them. If these expenses are paid from community funds, the deduction should be divided equally between the spouses.

7. **Individual Retirement Accounts**

There are several kinds of individual retirement arrangements (IRAs). They are traditional IRAs (including SEP-IRAs), SIMPLE IRAs, and Roth IRAs. Community property laws do not apply to IRAs or Coverdell ESAs.

8. **Personal Exemptions and Dependents**

When spouses file separate returns, they must claim their own exemptions for that year. The spouses cannot divide the amount allowed as an exemption for a dependent between them. When community funds provide over one-half of the support for more than one person who otherwise qualifies as a dependent, the spouses may divide the number of dependency exemptions as explained in the following example.

---

**Example**

Ron and Diane White have three dependent children and live in Nevada. If Ron and Diane file separately, only Ron can claim his own exemption, and only Diane can claim her own exemption. Ron and Diane can agree that one of them will claim the exemption for one, two, or all of their children and the other will claim any remaining exemptions. They cannot each claim half of the total exemption amount for their three children.
9. **Self-Employment Tax**

If any income from a trade or business other than a partnership is community income under state law, it is subject to self-employment tax as the income of the spouse carrying on the trade or business.

10. **Partnership Income**

If an interest is held in a partnership, and income from the partnership is attributable to the efforts of either spouse, the partnership income is community property.
### CHAPTER 10: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

PART II: INCOME TAX CONSIDERATIONS IN RETIREMENT PLANNING
CHAPTER 11: EMPLOYER-SPONSORED RETIREMENT PLANS

Chapter Objective

After completing this chapter, you should be able to:

• Identify the various types of retirement plans that small business owners can establish for themselves and their employees and the tax implications of each.

I. INTRODUCTION AND OVERVIEW

Virtually every detailed financial plan includes provisions for retirement. One important way in which people can save for retirement is through the savings of pre-tax dollars. This has the double benefit of providing an important source of retirement funding and of limiting income tax liability in the present time. This chapter discusses retirement plans small business owners can set up and maintain for themselves and their employees. The following types of retirement plans are covered:

• SEP (simplified employee pension) plans;
• SIMPLE (savings incentive match plan for employees) plans; and
• Qualified plans (also called H.R. 10 plans or Keogh plans when covering self-employed individuals).

SEP, SIMPLE, and qualified plans offer small business owners and their employees a tax-favored way to save for retirement. Employers can deduct contributions made to the plan for their employees. A sole proprietor can deduct contributions he or she makes to the plan for himself or herself.

Trustees’ fees can also be deducted if contributions to the plan do not cover them. Earnings on the contributions are generally tax-free until an employer or his or her employees receive distributions from the plan.

Under certain plans, employees can have their employer contribute limited amounts of their before-tax pay to a plan. These amounts (and earnings on them) are generally tax free until the employees receive distributions from the plan. The following is a summary of each type of plan.

A. SEP PLANS

SEPs provide a simplified method for an employer to make contributions to a retirement plan for employees. Instead of setting up a profit-sharing or money purchase plan with a trust, an employer can adopt a SEP agreement and make contributions directly to a traditional individual retirement account or a traditional individual retirement annuity (SEP-IRA) set up for each eligible employee.
B. SIMPLE PLANS

A SIMPLE plan can be set up by an employer who had 100 or fewer employees who received at least $5,000 in compensation from the employer for the preceding calendar year and who meets certain other requirements. Under a SIMPLE plan, employees can choose to make salary reduction contributions rather than receiving these amounts as part of their regular pay. In addition, the employer will contribute matching or nonelective contributions. The two types of SIMPLE plans are the SIMPLE IRA plan and the SIMPLE 401(k) plan.

C. QUALIFIED PLANS

The qualified plan rules are more complex than the SEP plan and SIMPLE plan rules. However, there are advantages to qualified plans, such as increased flexibility in designing plans and increased contribution and deduction limits in some cases.

II. SIMPLIFIED EMPLOYEE PENSION (SEP) PLANS

A simplified employee pension (SEP) is a written plan that allows employers to make contributions toward their own retirement (if they are self-employed) and their employees’ retirement without getting involved in a more complex qualified plan. Under a SEP, employers make the contributions to a traditional individual retirement arrangement (called a SEP-IRA) set up by or for each eligible employee. A SEP-IRA is owned and controlled by the employee, and employers make contributions to the financial institution where the SEP-IRA is maintained.

A. ELIGIBILITY REQUIREMENTS

SEP-IRAs are set up for, at a minimum, each eligible employee. A SEP-IRA may have to be set up for a leased employee, but does not need to be set up for excludable employees, discussed later.

1. Eligible Employee

An eligible employee is an individual who meets all the following requirements:

• Has reached age 21;

• Has worked for the employer in at least three of the last five years; and

• Has received at least $500 (indexed) in compensation for the current year ($600 in 2016 and 2017).

Employers can use less restrictive participation requirements than those listed, but not more restrictive ones.

2. Excludable Employees

The following employees can be excluded from coverage under a SEP:
• Employees covered by a union agreement and whose retirement benefits were bargained for in good faith by the employees’ union and the employer; and

• Nonresident alien employees who have received no U.S. source wages, salaries, or other personal services compensation from the employer.

B. SETTING UP A SEP

There are three basic steps in setting up a SEP:

• Execution of a formal written agreement to provide benefits to all eligible employees;

• Providing each eligible employee with certain information about the SEP; and

• Establishing a SEP-IRA by or for each eligible employee.

1. Formal Written Agreement

Employers must execute a formal written agreement to provide benefits to all eligible employees under a SEP. This requirement can be satisfied by adopting an IRS model SEP using Form 5305-SEP.

If an employer adopts an IRS model SEP using Form 5305-SEP, no prior IRS approval or determination letter is required. However, employers cannot use Form 5305-SEP if any of the following apply:

• They currently maintain any other qualified retirement plan. This does not prevent them from maintaining another SEP;

• They have any eligible employees for whom IRAs have not been set up;

• They use the services of leased employees;

• They are a member of any of the following unless all eligible employees of all the members of these groups, trades, or businesses participate under the SEP:
  ▫ An affiliated service group described in § 414(m);
  ▫ A controlled group of corporations described in § 414(b); and
  ▫ Trades or businesses under common control described in § 414(c); or

• They do not pay the cost of the SEP contributions.

2. Information Provided to Employees

Employers must give each eligible employee a copy of Form 5305-SEP, its instructions, and the other information listed in the Form 5305-SEP instructions. An IRS model SEP is not considered adopted until each employee has been given this information.

3. Establishing Plan for Each Employee

A SEP-IRA must be set up by or for each eligible employee. SEP-IRAs can be set up with banks, insurance companies, or other qualified financial institutions. Employers send SEP contributions to the
financial institution where the SEP-IRA is maintained. Employers can set up a SEP for a year as late as the due date (including extensions) of their income tax return for that year.

C. CONTRIBUTION RULES

The SEP rules permit employers to contribute a limited amount of money each year to each employee’s SEP-IRA. If they are self-employed, they can contribute to their own SEP-IRA. Contributions must be in the form of money (cash, check, or money order); property cannot be contributed. However, participants may be able to transfer or roll over certain property from one retirement plan to another.

Employers do not have to make contributions every year. But if they make contributions, they must be based on a written allocation formula and must not discriminate in favor of highly compensated employees. When contributions are made, the employer must contribute to the SEP-IRAs of all participants who actually performed personal services during the year for which the contributions are made, even employees who die or terminate employment before the contributions are made.

Contributions are deductible within limits, and generally are not taxable to the plan participants. A SEP-IRA cannot be designated as a Roth IRA. Employer contributions to a SEP-IRA will not affect the amount an individual can contribute to a Roth or traditional IRA. To deduct contributions for a year, employers must make the contributions by the due date (including extensions) of their tax return for the year.

1. Contribution Limits

Contributions limits are established for each year. For example, contributions made for 2016 to a common-law employee’s SEP-IRA could not exceed the lesser of 25% of the employee’s compensation or $53,000. Compensation generally does not include the employer’s contributions to the SEP.

2. Self-Contributions

The annual limits on contributions to a common-law employee’s SEP-IRA also apply to contributions employers make to their own SEP-IRA. However, special rules apply when figuring the maximum deductible contribution.

3. Annual Compensation Limit

Employers cannot consider the part of an employee’s compensation over $265,000 for 2016 ($270,000 for 2017) when figuring the contribution limit for that employee. However, $53,000 for 2016 ($54,000 for 2017) is the maximum contribution for an eligible employee.

If an employer contributes to a defined contribution plan, annual additions to an account are limited to the lesser of $53,000 or 100% of the participant’s compensation. When figuring this limit, employers must add their contributions to all defined contribution plans. Because a SEP is considered a defined contribution plan for this limit, contributions to a SEP must be added to contributions to other defined contribution plans.
4. Tax Treatment of Excess Contributions

Excess contributions are contributions to an employee’s SEP-IRA (or to the employer’s own SEP-IRA) that exceed the amount allowed for that particular year.

Excess contributions are included in the employee’s income for the year and are treated as contributions by the employee to his or her SEP-IRA.

D. DEDUCTING CONTRIBUTIONS

Generally, a business can deduct the contributions made each year to each employee’s SEP-IRA. If the employer is self-employed, he or she can deduct the contributions made each year to his or her own SEP-IRA.

1. Deduction Limit for Contributions for Participants

Federal law annually establishes a cap on how much an employer can deduct for his or her contributions (other than elective deferrals) for participants. In 2016, for example, it was the lesser of the following amounts:

- The employer’s contributions (including any excess contributions carryover); and
- 25% of the compensation (limited to $265,000 per participant) paid to the participants during 2016 from the business that has the plan, not to exceed $53,000 per participant.

In 2017, the amounts increased to $270,000 and $54,000.

2. Deduction Limit for Self-Employed Individuals

If an employer contributes to his or her own SEP-IRA, the employer must make a special computation to figure his or her maximum deduction for these contributions. When figuring the deduction for contributions made to one’s own SEP-IRA, compensation is the individual’s net earnings from self-employment, which takes into account both the following deductions:

- The deduction for one-half of the individual’s self-employment tax; and
- The deduction for contributions to his or her own SEP-IRA.

The deduction for contributions to one’s own SEP-IRA and his or her net earnings depend on each other. For this reason, an individual determines the deduction for contributions to his or her own SEP-IRA indirectly by reducing the contribution rate called for in his or her plan.

3. Carryover of Excess SEP Contributions

If an employer made SEP contributions that are more than the deduction limit (nondeductible contributions), it can carry over and deduct the difference in later years. However, the carryover, when combined with the contribution for the later year, is subject to the deduction limit for that year. If an employer made nondeductible (excess) contributions to a SEP, it may be subject to a 10% excise tax.
4. When To Deduct Contributions

When an employer can deduct contributions made for a year depends on the tax year on which the SEP is maintained. If the SEP is maintained on a calendar year basis, the employer can deduct contributions made for a year on its tax return for the year with or within which the calendar year ends. If the employer files its tax return and maintains the SEP using a fiscal year or short tax year, it may deduct contributions made for a year on its tax return for that year.

Example

WillCo is a fiscal year taxpayer whose tax year ends June 30. WillCo maintains a SEP on a calendar year basis. WillCo deducts SEP contributions made for calendar year 2016 on their tax return for the tax year ending June 30, 2017.

E. SALARY REDUCTION SIMPLIFIED EMPLOYEE PENSION (SARSEP)

A SARSEP is a SEP set up before 1997 that includes a salary reduction arrangement. Under a SARSEP, employees can choose to have the employer contribute part of their pay to their SEP-IRAs rather than receive it in cash. This contribution is called an “elective deferral” because employees choose (elect) to set aside the money, and they defer the tax on the money until it is distributed to them. Employers are not allowed to set up a SARSEP after 1996. However, participants (including employees hired after 1996) in a SARSEP set up before 1997 can continue to have employers contribute part of their pay to the plan.

1. Who Can Have a SARSEP

A SARSEP set up before 1997 is available to an employer and its eligible employees only if all the following requirements are met.

- At least 50% of employees eligible to participate choose to make elective deferrals;
- The employer has 25 or fewer employees who were eligible to participate in the SEP at any time during the preceding year; and
- The elective deferrals of highly compensated employees meet the SARSEP ADP test.

2. SARSEP ADP Test

Under the SARSEP ADP test, the amount deferred each year by each eligible highly compensated employee as a percentage of pay (the deferral percentage) cannot be more than 125% of the average deferral percentage (ADP) of all non-highly compensated employees eligible to participate.

For figuring the deferral percentage, compensation is generally the amount the employer pays to the employee for the year. Compensation includes the elective deferral and other amounts deferred in certain employee benefit plans. Elective deferrals under the SARSEP are included in figuring an employees’
deferral percentage even though they are not included in the income of employees for income tax purposes.

3. Limit on Elective Deferrals

The most a participant can choose to defer for each calendar year is established by the IRS. For example, in 2016 the amount was the lesser of the following amounts:

- 25% of the participant's compensation (limited to $265,000 of the participant's compensation); or
- $18,000.

The $18,000 limit in 2016 (and 2017) applied to the total elective deferrals the employee makes for the year to a SEP and any of the following:

- Cash or deferred arrangement (section 401(k) plan);
- Salary reduction arrangement under a tax-sheltered annuity plan (section 403(b) plan); or
- SIMPLE IRA plan.

A SARSEP can permit participants who are age 50 or over at the end of the calendar year to also make catch-up contributions. The catch-up contribution limit for 2016 (and 2017) is $6,000. However, the catch-up contribution a participant can make for a year cannot exceed the lesser of the following amounts:

- The catch-up contribution limit; or
- The excess of the participant’s compensation over the elective deferrals that are not catch-up contributions.

Catch-up contributions are not subject to the elective deferral limits.

4. Excess SEP Contributions

Excess SEP contributions are elective deferrals of highly compensated employees that are more than the amount permitted under the SARSEP ADP test. Employers must notify their highly compensated employees within 2½ months after the end of the plan year of their excess SEP contributions. If they do not notify them within this time period, they must pay a 10% tax on the excess.

F. DISTRIBUTIONS (WITHDRAWALS)

Employers cannot prohibit distributions from a SEP-IRA. Also, they cannot make contributions on the condition that any part of them must be kept in the account. Distributions are subject to IRA rules.

G. ADDITIONAL TAXES

The tax advantages of using SEP-IRAs for retirement savings can be offset by additional taxes. There are additional taxes for all the following actions:
• Making excess contributions;
• Making early withdrawals; and
• Not making required withdrawals.

Also, a SEP-IRA may be disqualified, or an excise tax may apply, if the account is involved in a prohibited transaction. If an employee improperly uses his or her SEP-IRA, such as by borrowing money from it, the employee has engaged in a prohibited transaction. In that case, the SEP-IRA will no longer qualify as an IRA.

If a SEP-IRA is disqualified because of a prohibited transaction, the assets in the account will be treated as having been distributed to the employee on the first day of the year in which the transaction occurred. The employee must include in income the fair market value of the assets (on the first day of the year) that is more than any cost basis in the account. Also, the employee may have to pay the additional tax for making early withdrawals.

III. SIMPLE PLANS

A savings incentive match plan for employees (SIMPLE plan) is a written arrangement that provides an employer and its employees with a simplified way to make contributions to provide retirement income. Under a SIMPLE plan, employees can choose to make salary reduction contributions to the plan rather than receiving these amounts as part of their regular pay. In addition, employers will contribute matching or non-elective contributions. SIMPLE plans can only be maintained on a calendar-year basis. A SIMPLE plan can be set up in either of the following ways:

• Using SIMPLE IRAs (SIMPLE IRA plan); or
• As part of a 401(k) plan (SIMPLE 401(k) plan).

A. SIMPLE IRA PLAN

A SIMPLE IRA plan is a retirement plan that uses SIMPLE IRAs for each eligible employee. Under a SIMPLE IRA plan, a SIMPLE IRA must be set up for each eligible employee. An employer can set up a SIMPLE IRA plan if it meets both of the following requirements:

• The employer meets the employee limit; and
• The employer does not maintain another qualified plan unless the other plan is for collective bargaining employees.

1. Employee Limit

To be eligible to establish a SIMPLE IRA plan, the employer must have had 100 or fewer employees who received $5,000 or more in compensation during the preceding year. Under this rule, employers must take into account all employees employed at any time during the calendar year regardless of whether they are eligible to participate. Employees include self-employed individuals who received earned
income and leased employees. Once an employer sets up a SIMPLE IRA plan, it must continue to meet the 100-employee limit each year it maintains the plan.

If an employer maintains a SIMPLE IRA plan for at least 1 year and ceases to meet the 100-employee limit in a later year, it will be treated as meeting it for the 2 calendar years immediately following the calendar year for which it last met it. A different rule applies if the employer does not meet the 100-employee limit because of an acquisition, disposition, or similar transaction. Under this rule, the SIMPLE IRA plan will be treated as meeting the 100-employee limit for the year of the transaction and the two following years if both the following conditions are satisfied:

- Coverage under the plan has not significantly changed during the grace period; and
- The SIMPLE IRA plan would have continued to qualify after the transaction if the company had remained a separate employer.

2. Other Qualified Plan

The SIMPLE IRA plan generally must be the only retirement plan to which an employer makes contributions, or to which benefits accrue, for service in any year beginning with the year the SIMPLE IRA plan becomes effective. There is an exception so that if an employer maintains a qualified plan for collective bargaining employees it may also maintain a SIMPLE IRA plan for other employees.

3. Eligible Employees

Any employee who received at least $5,000 in compensation during any 2 years preceding the calendar year in which the plan is in effect and is reasonably expected to receive at least $5,000 during the current calendar year is eligible to participate. The term "employee" includes a self-employed individual who received earned income.

Employers can use less restrictive eligibility requirements (but not more restrictive ones) by eliminating or reducing the prior year compensation requirements, the current year compensation requirements, or both. For example, an employer can allow participation for employees who received at least $3,000 in compensation during any preceding calendar year. However, they cannot impose any other conditions for participating in a SIMPLE IRA plan.

4. Excludable Employees

The following employees do not need to be covered under a SIMPLE IRA plan:

- Employees who are covered by a union agreement and whose retirement benefits were bargained for in good faith by the employees’ union and the employer; and
- Nonresident alien employees who have received no U.S. source wages, salaries, or other personal services compensation from their employer.

5. Compensation

Compensation for employees is the total wages required to be reported on Form W–2. Compensation also includes the salary reduction contributions made under this plan, compensation deferred under
a section 457 plan, and the employees’ elective deferrals under a section 401(k) plan, a SARSEP, or a section 403(b) annuity contract. If a plan sponsor is self-employed, compensation is his or her net earnings from self-employment before subtracting any contributions made to the SIMPLE IRA plan for himself or herself.

**B. SETTING UP A SIMPLE IRA PLAN**

Employers can use Form 5304-SIMPLE or Form 5305-SIMPLE to set up a SIMPLE IRA plan. Each form is a model savings incentive match plan for employees (SIMPLE) plan document. Which form a particular employer uses depends on whether the employer selects a financial institution or the employees select the institution that will receive the contributions.

Form 5304-SIMPLE is used when the employer allows each plan participant to select the financial institution for receiving his or her SIMPLE IRA plan contributions. Form 5305-SIMPLE is used if the employer requires that all contributions under the SIMPLE IRA plan be deposited initially at a designated financial institution.

The SIMPLE IRA plan is adopted when the employer completes all appropriate boxes and blanks on the form and it has been signed. It does not need to be filed with the IRS.

If an employer sets up a SIMPLE IRA plan using Form 5304-SIMPLE or Form 5305-SIMPLE, it can use the form to satisfy other requirements, including the following:

- Meeting employer notification requirements for the SIMPLE IRA plan; and
- Maintaining the SIMPLE IRA plan records and proving it set up a SIMPLE IRA plan for employees.

An employer can set up a SIMPLE IRA plan effective on any date from January 1 through October 1 of a year, provided it did not previously maintain a SIMPLE IRA plan. This requirement does not apply if the employer is a new employer that came into existence after October 1 of the year the SIMPLE IRA plan is set up and the employer set up a SIMPLE IRA plan as soon as administratively feasible after the business came into existence. If the employer had previously maintained a SIMPLE IRA plan, it can set up a SIMPLE IRA plan effective only on January 1 of a year. A SIMPLE IRA plan cannot have an effective date that is before the date an employer actually adopted the plan.

SIMPLE IRAs are the individual retirement accounts or annuities into which the contributions are deposited. A SIMPLE IRA must be set up for each eligible employee. A SIMPLE IRA cannot be designated as a Roth IRA. Contributions to a SIMPLE IRA will not affect the amount an individual can contribute to a Roth IRA. A SIMPLE IRA must be set up for an employee before the first date by which a contribution is required to be deposited into the employee’s IRA.

**C. NOTIFICATION AND ELECTION REQUIREMENTS**

If an employer adopts a SIMPLE IRA plan, it must notify each employee of the following information before the beginning of the election period:
• The employee’s opportunity to make or change a salary reduction choice under a SIMPLE IRA plan;
• The employer’s choice to make either matching contributions or non-elective contributions;
• A summary description provided by the financial institution; and
• Written notice that his or her balance can be transferred without cost or penalty if he or she uses a designated financial institution.

The election period is generally the 60-day period immediately preceding January 1 of a calendar year (November 2 to December 31 of the preceding calendar year). However, the dates of this period are modified if the employer sets up a SIMPLE IRA plan in mid-year (for example, on July 1) or if the 60-day period falls before the first day an employee becomes eligible to participate in the SIMPLE IRA plan.

A SIMPLE IRA plan can provide longer periods for permitting employees to enter into salary reduction agreements or to modify prior agreements. For example, a SIMPLE IRA plan can provide a 90-day election period instead of the 60-day period. Similarly, in addition to the 60-day period, a SIMPLE IRA plan can provide quarterly election periods during the 30 days before each calendar quarter, other than the first quarter of each year.

D. CONTRIBUTION LIMITS

Contributions are made up of salary reduction contributions and employer contributions. The employer must make either matching contributions or non-elective contributions. No other contributions can be made to the SIMPLE IRA plan. These contributions, which the employer can deduct, must be made timely.

1. Salary Reduction Contributions

The amount the employee chooses to have his or her employer contribute to a SIMPLE IRA on his or her behalf are determined annually. They could not be more than $12,500 for 2016 (and 2017). These contributions must be expressed as a percentage of the employee’s compensation unless the employer permits the employee to express them as a specific dollar amount. The employer cannot place restrictions on the contribution amount (such as limiting the contribution percentage), except to comply with the annual dollar limit.

If an employee is a participant in any other employer plan during the year and has elective salary reductions or deferred compensation under those plans, the salary reduction contributions under a SIMPLE IRA plan also are elective deferrals that count toward the overall annual limit (e.g., $18,000 for 2016 (and 2017)) on exclusion of salary reductions and other elective deferrals (e.g., a 401(k) plan).

2. Catch-up Contributions

A SIMPLE IRA plan can permit participants who are age 50 or over at the end of the calendar year to also make catch-up contributions. The catch-up contribution limit is $3,000 for 2016 (and 2017). However,
the catch-up contribution a participant can make for a year cannot exceed the lesser of the following amounts:

- The catch-up contribution limit; or
- The excess of the participant’s compensation over the salary reduction contributions that are not catch-up contributions.

3. **Employer Matching Contributions**

Employers are generally required to match each employee’s salary reduction contributions on a dollar-for-dollar basis up to 3% of the employee’s compensation. This requirement does not apply if the employer makes non-elective contributions as discussed later.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>In 2016, employee John Rose earned $25,000 and chose to defer 5% of his salary. The employer’s net earnings from self-employment are $40,000, and he chose to contribute 10% of his earnings to his SIMPLE IRA. The employer made 3% matching contributions. The total contribution the employer can make for John is $2,000, figured as follows:</td>
</tr>
<tr>
<td>Salary reduction contributions</td>
</tr>
<tr>
<td>($25,000 × .05)</td>
</tr>
<tr>
<td>Employer matching contribution</td>
</tr>
<tr>
<td>($25,000 × .03)</td>
</tr>
<tr>
<td><strong>Total contributions</strong></td>
</tr>
<tr>
<td>The total contribution the employer can make for himself is $5,200, figured as follows:</td>
</tr>
<tr>
<td>Salary reduction contributions</td>
</tr>
<tr>
<td>($40,000 × .10)</td>
</tr>
<tr>
<td>Employer matching contribution</td>
</tr>
<tr>
<td>($40,000 × .03)</td>
</tr>
<tr>
<td><strong>Total contributions</strong></td>
</tr>
</tbody>
</table>

4. **Lower Percentage**

If an employer chooses a matching contribution less than 3%, the percentage must be at least 1%. The employer must notify the employees of the lower match within a reasonable period of time before the 60-day election period for the calendar year. An employer cannot choose a percentage less than 3% for more than 2 years during the 5-year period that ends with (and includes) the year for which the choice is effective.
5. Non-elective Contributions

Instead of matching contributions, an employer can choose to make non-elective contributions of 2% of compensation on behalf of each eligible employee who has at least $5,000 (or some lower amount the employer selects) of compensation for the year. If an employer makes this choice, it must make non-elective contributions whether or not the employee chooses to make salary reduction contributions. In 2016, for example, only $265,000 of the employee's compensation could be taken into account to figure the contribution limit ($270,000 in 2017).

If an employer chooses this 2% contribution formula, they must notify the employees within a reasonable period of time before the 60-day election period for the calendar year.

6. Time Limits for Contributing Funds

Employers must make the salary reduction contributions to the SIMPLE IRA within 30 days after the end of the month in which the amounts would otherwise have been payable to the employee in cash. Employers must make matching contributions or non-elective contributions by the due date (including extensions) for filing his or her federal income tax return for the year.

E. DEDUCTING CONTRIBUTIONS

1. When Contributions Can Be Deducted

Employers can deduct SIMPLE IRA contributions in the tax year with or within the calendar year for which contributions were made ends. The employer can deduct contributions for a particular tax year if they are made for that tax year and are made by the due date (including extensions) of the employer’s federal income tax return for that year.

2. Tax Treatment of Contributions

Employers can deduct contributions and their employees can exclude these contributions from their gross income. SIMPLE IRA contributions are not subject to federal income tax withholding. However, salary reduction contributions are subject to social security, Medicare, and federal unemployment (FUTA) taxes. Matching and non-elective contributions are not subject to these taxes.

---

Examples

**Example 1.** Employer A’s tax year is the fiscal year ending June 30. Contributions under a SIMPLE IRA plan for the calendar year 2016 (including contributions made in 2016 before July 1, 2016) are deductible in the tax year ending June 30, 2017.

**Example 2.** Bill is a sole proprietor whose tax year is the calendar year. Contributions under a SIMPLE IRA plan for the calendar year 2016 (including contributions made in 2017 by April 15, 2017) are deductible in the 2016 tax year.
Distributions from a SIMPLE IRA are subject to IRA rules and generally are includible in income for the year received. Tax-free rollovers can be made from one SIMPLE IRA into another SIMPLE IRA. However, a rollover from a SIMPLE IRA to a non-SIMPLE IRA can be made tax free only after a 2-year participation in the SIMPLE IRA plan.

Early withdrawals generally are subject to a 10% additional tax. However, the additional tax is increased to 25% if funds are withdrawn within 2 years of beginning participation.

**F. SIMPLEX 401(K) PLANS**

Employers can adopt a SIMPLE plan as part of a 401(k) plan if they meet the 100-employee limit. A SIMPLE 401(k) plan is a qualified retirement plan and generally must satisfy the rules discussed above. However, a SIMPLE 401(k) plan is not subject to the nondiscrimination and top-heavy rules in that discussion if the plan meets the conditions listed below:

- Under the plan, an employee can choose to have his or her employer make salary reduction contributions for the year to a trust in an amount expressed as a percentage of the employee’s compensation, but not more than the cap per year published by the IRS ($12,500 for 2016 and 2017). If permitted under the plan, an employee who is age 50 or over can also make a catch-up contribution up to the amount allowed for that year (up to $3,000 for 2016 and 2017);

- The employer must make either:
  - Matching contributions up to 3% of compensation for the year; or
  - Non-elective contributions of 2% of compensation on behalf of each eligible employee who has at least $5,000 of compensation from the employer for the year.

- No other contributions can be made to the trust;

- No contributions are made, and no benefits accrue, for services during the year under any other qualified retirement plan of the employer on behalf of any employee eligible to participate in the SIMPLE 401(k) plan; and

- The employee’s rights to any contributions are nonforfeitable.

No more than $265,000 of the employee’s compensation can be taken into account in figuring salary reduction contributions, matching contributions, and nonelective contributions in 2016 ($270,000 in 2017). The notification requirement that applies to SIMPLE IRA plans also applies to SIMPLE 401(k) plans.
IV. QUALIFIED PLANS

Qualified retirement plans set up by self-employed individuals are sometimes called Keogh or H.R.10 plans. A sole proprietor or a partnership can set up a qualified plan. A common-law employee or a partner cannot set up a qualified plan. The plans described in this section can also be set up and maintained by employers that are corporations. All the rules discussed here apply to corporations except where specifically limited to the self-employed.

The plan must be for the exclusive benefit of employees or their beneficiaries. A qualified plan can include coverage for a self-employed individual. A self-employed individual is treated as both an employer and an employee.

An employer can usually deduct, subject to limits, contributions made to a qualified plan, including those made for the employer’s own retirement. The contributions (and earnings and gains on them) are generally tax free until distributed by the plan.

A. KINDS OF PLANS

There are two basic kinds of qualified plans – defined contribution plans and defined benefit plans – and different rules apply to each. An employer can have more than one qualified plan, but contributions to all the plans must not total more than the overall limits discussed later.

1. Defined Contribution Plan

A defined contribution plan provides an individual account for each participant in the plan. It provides benefits to a participant largely based on the amount contributed to that participant’s account. Benefits are also affected by any income, expenses, gains, losses, and forfeitures of other accounts that may be allocated to an account. A defined contribution plan can be either a profit-sharing plan or a money purchase pension plan.

a. Profit-sharing Plan

Although it is called a “profit-sharing plan,” an employer does not actually have to make a business profit for the year in order to make a contribution (except for the employer if he or she is self-employed). A profit-sharing plan can be set up to allow for discretionary employer contributions, meaning the amount contributed each year to the plan is not fixed. An employer may even make no contribution to the plan for a given year.

The plan must provide a definite formula for allocating the contribution among the participants and for distributing the accumulated funds to the employees after they reach a certain age, after a fixed number of years, or upon certain other occurrences. In general, an employer can be more flexible in making contributions to a profit-sharing plan than to a money purchase pension plan or a defined benefit plan.

Forfeitures under a profit-sharing plan can be allocated to the accounts of remaining participants in a nondiscriminatory way or they can be used to reduce an employer’s contributions.
b. Money Purchase Pension Plan

Contributions to a money purchase pension plan are fixed and are not based on a business’s profits. For example, if the plan requires that contributions be 10% of the participants’ compensation without regard to whether the employer has profits (or the self-employed person has earned income), the plan is a money purchase pension plan. This applies even though the compensation of a self-employed individual as a participant is based on earned income derived from business profits.

2. Defined Benefit Plan

A defined benefit plan is any plan that is not a defined contribution plan. Contributions to a defined benefit plan are based on what is needed to provide definitely determinable benefits to plan participants. Actuarial assumptions and computations are required to figure these contributions. Generally, small employers will need continuing professional help to have a defined benefit plan.

B. SETTING UP A QUALIFIED PLAN

There are two basic steps in setting up a qualified plan. First, an employer must adopt a written plan. The plan assets must then be invested. The employer is responsible for setting up and maintaining the plan. If someone is self-employed, it is not necessary to have other employees to sponsor and set up a qualified plan.

1. Set-up Deadline

To take a deduction for contributions for a tax year, a plan must be set up (adopted) by the last day of that year (December 31 for calendar year employers).

2. Credit for Startup Costs

An employer may be able to claim a tax credit for part of the ordinary and necessary costs of starting up a qualified plan for the year that it first became effective.

C. ADOPTING A WRITTEN PLAN

A written plan must be adopted. The plan can be an IRS-approved master or prototype plan offered by a sponsoring organization, or it can be an individually designed plan.

To qualify, the plan that is set up must be in writing and must be communicated to all employees. The plan’s provisions must be stated in the plan. It is not sufficient for the plan to merely refer to a requirement of the Internal Revenue Code.

Most qualified plans follow a standard form of plan (a master or prototype plan) approved by the IRS. Master and prototype plans are plans made available by plan providers for adoption by employers (including self-employed individuals). Under a master plan, a single trust or custodial account is established, as part of the plan, for the joint use of all adopting employers. Under a prototype plan, a separate trust or custodial account is established for each employer.
1. Individually Designed Plans

Businesses may prefer to set up an individually designed plan to meet specific needs. Although advance IRS approval is not required, the employer can apply for approval by paying a fee and requesting a determination letter.

D. INVESTING PLAN ASSETS

In setting up a qualified plan, an employer arranges how the plan’s funds will be used to build its assets. The following are some of the options:

- An employer can establish a trust or custodial account to invest the funds; or
- The employer, the trust, or the custodial account can buy an annuity contract from an insurance company. Life insurance can be included only if it is incidental to the retirement benefits.

The employer can set up a trust by a legal instrument (written document).

The employer can set up a custodial account with a bank, savings and loan association, credit union, or other person who can act as the plan trustee.

Employers do not need a trust or custodial account, although they can have one, to invest the plan’s funds in annuity contracts or face-amount certificates. If anyone other than a trustee holds them, however, the contracts or certificates must state they are not transferable.

E. MINIMUM FUNDING REQUIREMENT

In general, if a plan is a money purchase pension plan or a defined benefit plan, the employer must actually pay enough into the plan to satisfy the minimum funding standard for each year. Determining the amount needed to satisfy the minimum funding standard for a defined benefit plan is complicated. The amount is based on what should be contributed under the plan formula using actuarial assumptions and formulas.

1. Quarterly Installments of Required Contributions

If a plan is a defined benefit plan subject to the minimum funding requirements, employers generally must make quarterly installment payments of the required contributions. If they do not pay the full installments timely, they may have to pay interest on any underpayment for the period of the underpayment.

The due dates for the installments are 15 days after the end of each quarter. For a calendar-year plan, the installments are due April 15, July 15, October 15, and January 15 (of the following year). Each quarterly installment must be 25% of the required annual payment.

Additional contributions required to satisfy the minimum funding requirement for a plan year will be considered timely if made by 8½ months after the end of that year.
F. EMPLOYEE / SELF-EMPLOYED INDIVIDUAL CONTRIBUTIONS

A qualified plan is generally funded by employer contributions. However, employees participating in the plan may be permitted to make contributions. Eligible employees can make deductible contributions for a tax year up to the due date of their return (plus extensions) for that year.

Self-employed individuals can make contributions on behalf of themselves only if they have net earnings (compensation) from self-employment in the trade or business for which the plan was set up. Their net earnings must be from their personal services, not from their investments. If the individual has a net loss from self-employment, he or she cannot make contributions for himself or herself for the year, even if he or she can contribute for common-law employees based on his or her compensation.

1. When Contributions Are Considered Made

Employers generally apply their plan contributions to the year in which they make them. But employers can apply them to the previous year if all the following requirements are met:

- Contributions are made by the due date of their tax return for the previous year (plus extensions);
- The plan was established by the end of the previous year;
- The plan treats the contributions as though it had received them on the last day of the previous year; or
- The employer does either of the following:
  - They specify in writing to the plan administrator or trustee that the contributions apply to the previous year; or
  - They deduct the contributions on their tax return for the previous year.

An employer’s promissory note made out to the plan is not a payment that qualifies for the deduction.

2. Contributions Limits

There are certain limits on the contributions and other annual additions employers can make each year for plan participants. There are also limits on the amount employers can deduct.

A plan must provide that contributions or benefits cannot exceed certain limits. The limits differ depending on whether a plan is a defined contribution plan or a defined benefit plan. These limits are published annually by the IRS.

Employee participants may be permitted to make nondeductible contributions to a plan in addition to their employer’s contributions. Even though these employee contributions are not deductible, the earnings on them are tax free until distributed in later years.
G. EMPLOYER DEDUCTION

Employers can usually deduct, subject to limits, contributions they make to a qualified plan, including those made for their own retirement. The contributions (and earnings and gains on them) are generally tax free until distributed by the plan. The deduction limit for an employer’s contributions to a qualified plan depends on the kind of plan the employer has.

1. Defined Contribution Plans

The deduction for contributions to a defined contribution plan (profit-sharing plan or money purchase pension plan) cannot be more than 25% of the compensation paid (or accrued) during the year to an employer’s eligible employees participating in the plan. If the employer is self-employed, the employer must reduce this limit in figuring the deduction for contributions he or she makes for his or her own account.

When figuring the deduction limit, the following rules apply:

- Elective deferrals (discussed later) are not subject to the limit;
- Compensation includes elective deferrals; and
- The maximum compensation that can be taken into account for each employee is $200,000 (indexed) ($265,000 for 2016; $270,000 for 2017).

2. Defined Benefit Plans

The deduction for contributions to a defined benefit plan is based on actuarial assumptions and computations. Consequently, an actuary must figure an employer’s deduction limit.

In figuring the deduction for contributions, employers cannot take into account any contributions or benefits that are more than the limits.

3. Deduction Limit for Self-Employed Individuals

If an employer makes contributions for himself or herself, he or she needs to make a special computation to figure his or her maximum deduction for these contributions. Compensation is his or her net earnings from self-employment. This definition takes into account both the following items:

- The deduction for one-half of his or her self-employment tax; and
- The deduction for contributions on his or her behalf to the plan.

The deduction for an individual’s own contributions and his or her net earnings depend on each other. For this reason, a self-employed person determines the deduction for his or her own contributions indirectly by reducing the contribution rate called for in his or her plan.

4. Carryover of Excess Contributions

If an employer contributes more to a plan than it can deduct for the year, it can carry over and deduct the difference in later years, combined with its contributions for those years. The employer’s combined
deduction in a later year is limited to 25% of the participating employees’ compensation for that year. For purposes of this limit, a SEP is treated as a profit-sharing (defined contribution) plan. However, this percentage limit must be reduced to figure their maximum deduction for contributions an employer makes for himself. The amount an employer carries over and deducts may be subject to the excise tax, below.

5. **Excise Tax for Nondeductible (Excess) Contributions**

If an employer contributes more than its deduction limit to a retirement plan, the employer has made nondeductible contributions and may be liable for an excise tax. In general, a 10% excise tax applies to nondeductible contributions made to qualified pension and profit-sharing plans and to SEPs.

There is a special rule for self-employed individuals. The 10% excise tax does not apply to any contribution made to meet the minimum funding requirements in a money purchase pension plan or a defined benefit plan. Even if that contribution is more than the self-employed person’s earned income from the trade or business for which the plan is set up, the difference is not subject to this excise tax.

**H. ELECTIVE DEFERRALS (401K PLANS)**

An employer’s qualified plan can include a cash or deferred arrangement under which participants can choose to have their employer contribute part of their before-tax compensation to the plan rather than receive the compensation in cash. A plan with this type of arrangement is popularly known as a “401(k) plan.” (A self-employed individual participating in the plan can contribute part of his or her before-tax net earnings from the business.) This contribution is called an “elective deferral” because participants choose (elect) to defer receipt of the money.

In general, a qualified plan can include a cash or deferred arrangement only if the qualified plan is one of the following plans:

- A profit-sharing plan; or
- A money purchase pension plan in existence on June 27, 1974, that included a salary reduction arrangement on that date.

1. **Partnership**

A partnership can have a 401(k) plan.

2. **Restriction on Conditions of Participation**

The plan cannot require, as a condition of participation, that an employee complete more than 1 year of service.

3. **Matching Contributions**

If the plan permits, employers can make matching contributions for an employee who makes an elective deferral to his or her 401(k) plan. For example, the plan might provide that the employer will contribute 50 cents for each dollar its participating employees choose to defer under the 401(k) plan.
4. Non-Elective Contributions

Employers can also make contributions (other than matching contributions) for their participating employees without giving them the choice to take cash instead. These are called nonelective contributions.

5. Employee Compensation Limit

No more than $265,000 for 2016 ($270,000 for 2017) of the employee’s compensation can be taken into account when figuring contributions other than elective deferrals.

6. Automatic Enrollment

A 401(k) plan can have an automatic enrollment feature. Under this feature, you can automatically reduce an employee’s pay by a fixed percentage and contribute that amount to the 401(k) plan on his or her behalf unless the employee affirmatively chooses not to have his or her pay reduced or chooses to have it reduced by a different percentage. These contributions are elective deferrals. An automatic enrollment feature will encourage employees’ saving for retirement and will help the plan pass nondiscrimination testing (if applicable).

I. DISTRIBUTIONS

Amounts paid to plan participants from a qualified plan are called distributions. Distributions may be non-periodic, such as lump-sum distributions, or periodic, such as annuity payments. Also, certain loans may be treated as distributions.

1. Required Distributions

A qualified plan must provide that each participant will either:

- Receive his or her entire interest (benefits) in the plan by the required beginning date (defined later), or
- Begin receiving regular periodic distributions by the required beginning date in annual amounts calculated to distribute the participant’s entire interest (benefits) over his or her life expectancy or over the joint life expectancy of the participant and the designated beneficiary (or over a shorter period).

These distribution rules apply individually to each qualified plan. Employers cannot satisfy the requirement for one plan by taking a distribution from another. The plan must provide that these rules override any inconsistent distribution options previously offered.

2. Minimum Distributions

If the account balance of a qualified plan participant is to be distributed (other than as an annuity), the plan administrator must figure the minimum amount required to be distributed each distribution calendar year. This minimum is figured by dividing the account balance by the applicable life expectancy.
3. **Required Beginning Date**

Generally, each participant must receive his or her entire benefits in the plan or begin to receive periodic distributions of benefits from the plan by the required beginning date.

A participant must begin to receive distributions from his or her qualified retirement plan by April 1 of the first year after the later of the following years: (a) the calendar year in which he or she reaches age 70½; or (b) the calendar year in which he or she retires from employment with the employer maintaining the plan.

However, the plan may require the participant to begin receiving distributions by April 1 of the year after the participant reaches age 70½ even if the participant has not retired.

If the participant is a 5% owner of the employer maintaining the plan, the participant must begin receiving distributions by April 1 of the first year after the calendar year in which the participant reached age 70½.

4. **Distributions After the Starting Year**

The distribution required to be made by April 1 is treated as a distribution for the starting year. After the starting year, the participant must receive the required distribution for each year by December 31 of that year. If no distribution is made in the starting year, required distributions for 2 years must be made in the next year (one by April 1 and one by December 31).

5. **Distributions from 401(k) Plans**

Generally, distributions cannot be made until one of the following occurs:

- The employee retires, dies, becomes disabled, or otherwise severs employment;
- The plan ends and no other defined contribution plan is established or continued;
- In the case of a 401(k) plan that is part of a profit-sharing plan, the employee reaches age 59½ or suffers financial hardship; or
- The employee becomes eligible for a qualified reservist distribution.

Even in such cases, certain distributions may be subject to the tax on early distributions.

**J. TAX TREATMENT OF DISTRIBUTIONS**

Distributions from a qualified plan minus a prorated part of any cost basis are subject to income tax in the year they are distributed. Since most recipients have no cost basis, a distribution is generally fully taxable.

The tax treatment of distributions depends on whether they are made periodically over several years or life (periodic distributions) or are non-periodic distributions.
1. **Rollover**

The recipient of an eligible rollover distribution from a qualified plan can defer the tax on it by rolling it over into a traditional IRA or another eligible retirement plan. However, it may be subject to withholding. A rollover can also be made to a Roth IRA, in which case, any previously untaxed amounts are includible in gross income unless the rollover is from a designated Roth account.

2. **Eligible Rollover Distribution**

This is a distribution of all or any part of an employee’s balance in a qualified retirement plan that is not any of the following:

- A required minimum distribution;
- Any of a series of substantially equal payments made at least once a year over any of the following periods;
  - The employee’s life or life expectancy;
  - The joint lives or life expectancies of the employee and beneficiary; or
  - A period of 10 years or longer.
- A hardship distribution;
- The portion of a distribution that represents the return of an employee’s nondeductible contributions to the plan;
- Loans treated as distributions;
- Dividends on employer securities;
- The cost of life insurance coverage provided under a qualified retirement plan; or
- Similar items designated by the IRS in published guidance.

An individual may be able to roll over the nontaxable part of a distribution to another qualified retirement plan or a section 403(b) plan, or to an IRA. If the rollover is to a qualified retirement plan or a section 403(b) plan that separately accounts for the taxable and nontaxable parts of the rollover, the transfer must be made through a direct (trustee-to-trustee) rollover. If the rollover is to an IRA, the transfer can be made by any rollover method.

A distribution from a designated Roth account can be rolled over to another designated Roth account or to a Roth IRA. If the rollover is to a Roth IRA, it can be rolled over by any rollover method, but if the rollover is to another designated Roth account, it must be rolled over directly (trustee-to-trustee).

3. **Withholding Requirement**

If, during a year, a qualified plan pays to a participant one or more eligible rollover distributions that are reasonably expected to total $200 or more, the payor must withhold 20% of each distribution for federal income tax.
If, instead of having the distribution paid to him or her, the participant chooses to have the plan pay it directly to an IRA or another eligible retirement plan (a direct rollover), no withholding is required.

If the distribution is not an eligible rollover distribution, the 20% withholding requirement does not apply. Other withholding rules apply to distributions such as long-term periodic distributions and required distributions (periodic or non-periodic). However, the participant can still choose not to have tax withheld from these distributions. If the participant does not make this choice, the following withholding rules apply:

- For periodic distributions, withholding is based on their treatment as wages; and
- For non-periodic distributions, 10% of the taxable part is withheld.

4. **Estimated Tax Payments**

If no income tax is withheld or not enough tax is withheld, the recipient of a distribution may have to make estimated tax payments.

5. **Tax on Early Distributions**

If a distribution is made to an employee under the plan before he or she reaches age 59½, the employee may have to pay a 10% additional tax on the distribution. This tax applies to the amount received that the employee must include in income.

The 10% tax will not apply if distributions before age 59½ are made in any of the following circumstances:

- Made to a beneficiary (or to the estate of the employee) on or after the death of the employee;
- Made due to the employee having a qualifying disability;
- Made as part of a series of substantially equal periodic payments beginning after separation from service and made at least annually for the life or life expectancy of the employee or the joint lives or life expectancies of the employee and his or her designated beneficiary. (The payments under this exception, except in the case of death or disability, must continue for at least 5 years or until the employee reaches age 59½, whichever is the longer period.);
- Made to an employee after separation from service if the separation occurred during or after the calendar year in which the employee reached age 55;
- Made to an alternate payee under a qualified domestic relations order (QDRO);
- Made to an employee for medical care up to the amount allowable as a medical expense deduction (determined without regard to whether the employee itemizes deductions);
- Timely made to reduce excess contributions under a 401(k) plan;
• Timely made to reduce excess employee or matching employer contributions (excess aggregate contributions);

• Timely made to reduce excess elective deferrals;

• Made because of an IRS levy on the plan;

• Made as a qualified reservist distribution; or

• Made as a permissible withdrawal from an eligible automatic contribution arrangement (EACA).

6. **Tax on Excess Benefits**

If an individual is or has been a 5% owner of the business maintaining the plan, amounts he or she receives at any age that are more than the benefits provided for him or her under the plan formula are subject to an additional tax. This tax also applies to amounts received by the person’s successor. The tax is 10% of the excess benefit includible in income.

An individual is a 5% owner if he or she meets either of the following conditions at any time during the 5 plan years immediately before the plan year that ends within the tax year they receive the distribution:

• The individual owns more than 5% of the capital or profits interest in the employer; or

• The individual owns or is considered to own more than 5% of the outstanding stock (or more than 5% of the total voting power of all stock) of the employer.

A 20% or 50% excise tax is generally imposed on the cash and fair market value of other property an employer receives directly or indirectly from a qualified plan.

An employer or the plan will have to pay an excise tax if both the following occur:

• A defined benefit plan or money purchase pension plan is amended to provide for a significant reduction in the rate of future benefit accrual; and

• The plan administrator fails to notify the affected individuals and the employee organizations representing them of the reduction in writing.

A plan amendment that eliminates or reduces any early retirement benefit or retirement-type subsidy reduces the rate of future benefit accrual.

The notice must be written in a manner calculated to be understood by the average plan participant and must provide enough information to allow each individual to understand the effect of the plan amendment. It must be provided within a reasonable time before the amendment takes effect.

The tax is $100 per participant or alternate payee for each day the notice is late. The total tax cannot be more than $500,000 during the tax year. It is imposed on the employer, or, in the case of a multi-employer plan, on the plan.
K. PROHIBITED TRANSACTIONS

Prohibited transactions are transactions between the plan and a disqualified person that are prohibited by law. A disqualified person who takes part in a prohibited transaction must pay a tax. Prohibited transactions generally include the following transactions:

- A transfer of plan income or assets to, or use of them by or for the benefit of, a disqualified person;
- Any act of a fiduciary by which he or she deals with plan income or assets in his or her own interest;
- The receipt of consideration by a fiduciary for his or her own account from any party dealing with the plan in a transaction that involves plan income or assets; and
- Any of the following acts between the plan and a disqualified person:
  - Selling, exchanging, or leasing property;
  - Lending money or extending credit; or
  - Furnishing goods, services, or facilities.

Certain transactions are exempt from being treated as prohibited transactions. For example, a prohibited transaction does not take place if a disqualified person receives any benefit to which he or she is entitled as a plan participant or beneficiary. However, the benefit must be figured and paid under the same terms as for all other participants and beneficiaries.

1. Disqualified Persons

A person is a disqualified person if he or she is any of the following:

- A fiduciary of the plan;
- A person providing services to the plan;
- An employer, any of whose employees are covered by the plan;
- An employee organization, any of whose members are covered by the plan.
- Any direct or indirect owner of 50% or more of any of the following:
  - The combined voting power of all classes of stock entitled to vote, or the total value of shares of all classes of stock of a corporation that is an employer or employee organization described above;
  - The capital interest or profits interest of a partnership that is an employer or employee organization described above;
  - The beneficial interest of a trust or unincorporated enterprise that is an employer or an employee organization described above;
• A member of the family of any individual described above. (A member of a family is the spouse, ancestor, lineal descendant, or any spouse of a lineal descendant.);

• A corporation, partnership, trust, or estate of which (or in which) any direct or indirect owner described in above holds 50% or more of any of the following:
  ▫ The combined voting power of all classes of stock entitled to vote or the total value of shares of all classes of stock of a corporation;
  ▫ The capital interest or profits interest of a partnership; or
  ▫ The beneficial interest of a trust or estate;

• An officer, director (or an individual having powers or responsibilities similar to those of officers or directors), a 10% or more shareholder, or highly compensated employee (earning 10% or more of the yearly wages of an employer) of a person described above;

• A 10% or more (in capital or profits) partner or joint venturer of a person described above; or

• Any disqualified person, as described above, who is a disqualified person with respect to any plan to which a § 501(c)(22) trust is permitted to make payments under § 4223 of ERISA.

2. Tax on Prohibited Transactions

The initial tax on a prohibited transaction is 15% of the amount involved for each year (or part of a year) in the taxable period. If the transaction is not corrected within the taxable period, an additional tax of 100% of the amount involved is imposed.

Both taxes are payable by any disqualified person who participated in the transaction (other than a fiduciary acting only as such). If more than one person takes part in the transaction, each person can be jointly and severally liable for the entire tax.

The amount involved in a prohibited transaction is the greater of the following amounts: (a) the money and fair market value of any property given; or (b) the money and fair market value of any property received. If services are performed, the amount involved is any excess compensation given or received.

3. Taxable Period

The taxable period starts on the transaction date and ends on the earliest of the following days:

• The day the IRS mails a notice of deficiency for the tax;

• The day the IRS assesses the tax; or

• The day the correction of the transaction is completed.
4. Correcting a Prohibited Transaction

If someone is a disqualified person who participated in a prohibited transaction, he or she can avoid the 100% tax by correcting the transaction as soon as possible. Correcting the transaction means undoing it as much as possible without putting the plan in a worse financial position than if the person had acted under the highest fiduciary standards.

If the prohibited transaction is not corrected during the taxable period, the person usually has an additional 90 days after the day the IRS mails a notice of deficiency for the 100% tax to correct the transaction. This correction period (the taxable period plus the 90 days) can be extended if either the IRS grants reasonable time to correct the transaction or a petition is made to the Tax Court.

If the transaction is corrected within this period, the IRS will abate, credit, or refund the 100% tax.

L. QUALIFICATION RULES

To qualify for the tax benefits available to qualified plans, a plan must meet certain requirements (qualification rules) of the tax law. Generally, the following qualification rules also apply to a SIMPLE 401(k) retirement plan. A SIMPLE 401(k) plan is, however, not subject to the top-heavy plan rules and nondiscrimination rules.

1. Plan Assets Must Not Be Diverted

The plan must make it impossible for its assets to be used for, or diverted to, purposes other than the benefit of employees and their beneficiaries. As a general rule, the assets cannot be diverted to the employer.

2. Minimum Coverage Requirement Must Be Met

To be a qualified plan, a defined benefit plan must benefit at least the lesser of the following:

- 50 employees, or
- The greater of:
  1) 40% of all employees, or
  2) Two employees.

If there is only one employee, the plan must benefit that employee.

3. Non-Discrimination

Under the plan, contributions or benefits to be provided must not discriminate in favor of highly compensated employees.

4. Contribution and Benefit Limits

Contributions and benefits must not be more than certain limits. The limits apply to the annual contributions and other additions to the account of a participant in a defined contribution plan and to the annual benefit payable to a participant in a defined benefit plan.
5. **Vesting Standards**

A plan must satisfy certain requirements regarding when benefits vest. A benefit is vested (a participant has a fixed right to it) when it becomes non-forfeitable. A benefit is non-forfeitable if it cannot be lost upon the happening, or failure to happen, of any event.

6. **Participation**

In general, an employee must be allowed to participate in the plan if he or she meets both the following requirements: (a) he or she has reached age 21; and (b) he or she has at least one year of service (two years if the plan is not a 401(k) plan and provides that after not more than two years of service the employee has a non-forfeitable right to all his or her accrued benefit). A plan cannot exclude an employee because he or she has reached a specified age.

7. **Early Retirement**

A plan can provide for payment of retirement benefits before the normal retirement age. If a plan offers an early retirement benefit, a participant who separates from service before satisfying the early retirement age requirement is entitled to that benefit if he or she meets both the following requirements:

- Satisfies the service requirement for the early retirement benefit; and
- Separates from service with a non-forfeitable right to an accrued benefit. The benefit, which may be actuarially reduced, is payable when the early retirement age requirement is met.

8. **Survivor Benefits**

Defined benefit and money purchase pension plans must provide automatic survivor benefits in both the following forms:

- A qualified joint and survivor annuity for a vested participant who does not die before the annuity starting date; and
- A qualified pre-retirement survivor annuity for a vested participant who dies before the annuity starting date and who has a surviving spouse.

The automatic survivor benefit also applies to any participant under a profit-sharing plan unless all the following conditions are met:

- The participant does not choose benefits in the form of a life annuity;
- The plan pays the full vested account balance to the participant’s surviving spouse (or other beneficiary if the surviving spouse consents or if there is no surviving spouse) if the participant dies; and
- The plan is not a direct or indirect transferee of a plan that must provide automatic survivor benefits.
If automatic survivor benefits are required for a spouse under a plan, he or she must consent to a loan that uses as security the accrued benefits in the plan. Each plan participant may be permitted to waive the joint and survivor annuity or the pre-retirement survivor annuity (or both), but only if the participant has the written consent of the spouse. The plan also must allow the participant to withdraw the waiver. The spouse’s consent must be witnessed by a plan representative or notary public.

9. **Waiver of Waiting Period**

A plan may permit a participant to waive (with spousal consent) the 30-day minimum waiting period after a written explanation of the terms and conditions of a joint and survivor annuity is provided to each participant. The waiver is allowed only if the distribution begins more than 7 days after the written explanation is provided.

10. **Involuntary Cash-Out of Benefits**

A plan may provide for the immediate distribution of the participant’s benefit under the plan if the present value of the benefit is not greater than $5,000. However, the distribution cannot be made after the annuity starting date unless the participant and the spouse or surviving spouse of a participant who died (if automatic survivor benefits are required for a spouse under the plan) consents in writing to the distribution.

If the present value is greater than $5,000, the plan must have the written consent of the participant and the spouse or surviving spouse (if automatic survivor benefits are required for a spouse under the plan) for any immediate distribution of the benefit. Benefits attributable to rollover contributions and earnings on them can be ignored in determining the present value of these benefits.

A plan must provide for the automatic rollover of any cash-out distribution of more than $1,000 to an individual retirement account or annuity, unless the participant chooses otherwise. A section 402(f) notice must be sent prior to an involuntary cash-out of an eligible rollover distribution.

11. **Consolidation, Merger or Transfer of Assets or Liabilities**

A plan must provide that, in the case of any merger or consolidation with, or transfer of assets or liabilities to, any other plan, each participant would (if the plan then terminated) receive a benefit equal to or more than the benefit he or she would have been entitled to just before the merger, etc. (if the plan had then terminated).

A plan must provide that its benefits cannot be assigned or alienated. However, a loan from the plan (not from a third party) to a participant or beneficiary is not treated as an assignment or alienation if the loan is secured by the participant’s accrued non-forfeitable benefit and is exempt from the tax on prohibited transactions under section 4975(d)(1) or would be exempt if the participant were a disqualified person. A disqualified person is defined earlier under Prohibited Transactions, above.
12. **No Benefit Reduction for Social Security Increases**

A plan must not permit a benefit reduction for a post-separation increase in the social security benefit level or wage base for any participant or beneficiary who is receiving benefits under your plan, or who is separated from service and has non-forfeitable rights to benefits. This rule also applies to plans supplementing the benefits provided by other federal or state laws.

13. **Top-Heavy Plan Requirements**

A top-heavy plan is one that mainly favors partners, sole proprietors, and other key employees. A plan is top heavy for any plan year for which the total value of accrued benefits or account balances of key employees is more than 60% of the total value of accrued benefits or account balances of all employees. Additional requirements apply to a top-heavy plan primarily to provide minimum benefits or contributions for non-key employees covered by the plan.

Most qualified plans, whether or not top heavy, must contain provisions that meet the top-heavy requirements and will take effect in plan years in which the plans are top heavy. These qualification requirements for top-heavy plans are explained in § 416 and its regulations. The top-heavy plan requirements do not apply to SIMPLE 401(k) plans or to safe harbor 401(k) plans that consist solely of safe harbor contributions.
THIS PAGE INTENTIONALLY LEFT BLANK.
The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

4. A qualified retirement plan _____ include coverage for a self-employed individual.

   A. can
   B. cannot
   C. can, with IRS approval
   D. can, if established with a major financial institution
## CHAPTER 11: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

1. **A. CORRECT.** Only employers with 100 or fewer employees are eligible to establish SIMPLE plans.

   **B. Incorrect.** These plans are designed for small employers, and those with more than 100 employees are not eligible.

   **C. Incorrect.** Employees can elect to have a salary reduction fund these plans with pre-tax dollars.

   **D. Incorrect.** Employers can make elective matching contributions to their employee’s plans.

   (See page 220 of the course material.)

2. **A. Incorrect.** In addition to other eligibility requirements, this employee headcount limit is too low.

   **B. Incorrect.** The actual employee limit is greater than this quantity.

   **C. Incorrect.** Eligibility requirements include a maximum number of employees – this is not that amount.

   **D. CORRECT.** To be eligible, the employer must have had 100 or fewer employees, each of whom received $5,000 or more in compensation during the preceding year. Under this rule, employers must take into account all employees employed at any time during the calendar year regardless of whether they are eligible to participate.

   (See page 226 of the course material.)

3. **A. CORRECT.** This is true provided the employer did not already maintain a SIMPLE IRA. In addition, there is an exception to this general rule for new employers.

   **B. Incorrect.** Unless it is a new employer, such plans must generally be enacted by October 1.

   **C. Incorrect.** The period is much longer.

   **D. Incorrect.** The period runs from January 1 through October 1.

   (See page 228 of the course material.)
A. **CORRECT.** A qualified retirement plan can include coverage for self-employed individuals. Under such circumstances, the self-employed individual is treated as both an employer and an employee.

B. Incorrect. A self-employed individual can participate along with common law employees in receiving contributions made (assuming that amounts are calculated equally) by a business to their retirement accounts.

C. Incorrect. Special approval from the IRS is not required in order for a business to provide a qualified retirement plan to a self-employed individual.

D. Incorrect. There is no such limitation placed on the establishment of a qualified retirement plan.

*(See page 233 of the course material.)*
An individual retirement arrangement (IRA) is a personal savings plan that gives individual taxpayers tax advantages for setting aside money for retirement. Two tax advantages of an IRA are that:

- Contributions made to an IRA may be fully or partially deductible, depending on the type of IRA and the taxpayers’ individual circumstances; and
- Generally, amounts in a taxpayer’s IRA (including earnings and gains) are not taxed until distributed. In some cases, amounts are not taxed at all if distributed according to the rules.

I. TRADITIONAL IRA

This section discusses the original IRA. In this chapter the original IRA (sometimes called an ordinary or regular IRA) is referred to as a “traditional IRA.”

A. ELIGIBILITY REQUIREMENTS

An individual can set up and make contributions to a traditional IRA if:

- The individual (or, if he or she files a joint return, his or her spouse) received taxable compensation during the year; and
- The individual was not age 70½ by the end of the year.

Individuals can have a traditional IRA whether or not they are covered by any other retirement plan. However, individuals may not be able to deduct all of their contributions if they or their spouse is covered by an employer retirement plan.
TABLE 12-1. HOW ARE A TRADITIONAL IRA AND A ROTH IRA DIFFERENT?

This table shows the differences between traditional and Roth IRAs. Answers in the middle column apply to traditional IRAs. Answers in the right column apply to Roth IRAs.

<table>
<thead>
<tr>
<th>Question</th>
<th>Traditional IRA</th>
<th>Roth IRA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age limits to set up and contribute to an IRA</td>
<td>Individual must not have reached age 70½ by the end of the year</td>
<td>Can be established at any age</td>
</tr>
<tr>
<td>Earnings and contribution limits</td>
<td>No upper limit on how much a taxpayer can earn and still contribute; contribution limits determined annually</td>
<td>Some limits based on income, filing status and whether taxpayer contributes to another IRA</td>
</tr>
<tr>
<td>Deductibility of contributions</td>
<td>Taxpayers may be able to deduct contributions to IRA depending on income, filing status, and whether they are covered by a retirement plan at work or receive social security benefits</td>
<td>Contributions to Roth IRA are never deductible</td>
</tr>
<tr>
<td>Filing requirement for contributions</td>
<td>No filing required unless taxpayer made nondeductible contributions to traditional IRA (in which case Form 8606 must be filed)</td>
<td>No filing required for contributions to Roth IRA</td>
</tr>
<tr>
<td>Mandatory distributions</td>
<td>Taxpayers must begin receiving required minimum distributions by April 1 of the year following the year they reach age 70½</td>
<td>Owners of Roth IRA not required to take distributions regardless of age</td>
</tr>
<tr>
<td>Taxation of distributions</td>
<td>Distributions from an ordinary IRA are taxed as ordinary income, but if taxpayer made nondeductible contributions, not all of distribution is taxable</td>
<td>Distributions from Roth IRA are not taxed as long as owner meets certain criteria</td>
</tr>
<tr>
<td>Reporting of distributions</td>
<td>No reporting requirements unless taxpayers ever made nondeductible contributions to traditional IRA (then must file Form 8606)</td>
<td>Owners must file Form 8606 if they receive distributions from a Roth IRA (other than a rollover, characterization, certain qualified distributions or a return of certain contributions)</td>
</tr>
</tbody>
</table>

If both the individual and his or her spouse have compensation and are under age 70½, each can set up an IRA, but cannot both participate in the same IRA.

B. COMPENSATION

Generally, compensation is what an individual earns from working, i.e., wages, salaries, tips, professional fees and other amounts received for providing services. For self-employed individuals, compensation
is the net earnings from the person’s trade or business (provided their personal services are a material income-producing factor) reduced by the total of:

- The deduction for contributions made on the individual’s behalf to retirement plans; and
- The deduction allowed for one-half of self-employment taxes.

1. **Self-Employment Income**

When an individual has both self-employment income and salaries and wages, his or her compensation includes *both* amounts. If an individual has a net loss from self-employment, he or she may not subtract the loss from his or her salaries or wages when figuring his or her total compensation.

2. **Alimony and Separate Maintenance**

For IRA purposes, compensation includes any taxable alimony and separate maintenance payments received under a decree of divorce or separate maintenance.

### TABLE 12-2. COMPENSATION FOR PURPOSES OF AN IRA

### C. TYPES OF TRADITIONAL INDIVIDUAL RETIREMENT ARRANGEMENTS

A traditional IRA can be an individual retirement account or annuity. It can be part of either a simplified employee pension (SEP) or an employer or employee association trust account.

1. **Individual Retirement Account**

An individual retirement account is a trust or custodial account set up in the United States for the exclusive benefit of one person or his or her beneficiaries. The account is created by a written document. The document must show that the account meets all of the following requirements:

- The trustee or custodian must be a bank, a federally insured credit union, a savings and loan association, or an entity approved by the IRS to act as trustee or custodian;
- The trustee or custodian generally cannot accept contributions of more than the deductible amount for the year. However, rollover contributions and employer contributions to a simplified employee pension (SEP), can be more than this amount;
- Contributions, except for rollover contributions, must be in cash;
• The investor must have a nonforfeitable right to the amount at all times;
• Money in the account cannot be used to buy a life insurance policy;
• Assets in the account cannot be combined with other property, except in a common trust fund or common investment fund; and
• The individual must start receiving distributions by April 1 of the year following the year in which he or she reaches age 70½.

2. Individual Retirement Annuity

A person can set up an individual retirement annuity by purchasing an annuity contract or an endowment contract from a life insurance company. An individual retirement annuity must be issued in the investor’s name as the owner, and either the owner or his or her beneficiaries who survive are the only ones who can receive the benefits or payments.

An individual retirement annuity must meet all of the following requirements:

• The investor’s entire interest in the contract must be nonforfeitable;
• The contract must provide that the investor cannot transfer any portion of it to any person other than the issuer;
• There must be flexible premiums so that if the investor’s compensation changes, his or her payment can also change. This provision applies to contracts issued after November 6, 1978;
• The contract must provide that contributions cannot be more than the deductible amount for an IRA for the year, and that the investor must use any refunded premiums to pay for future premiums or to buy more benefits before the end of the calendar year after the year in which he or she receives the refund; and
• Distributions must begin by April 1 of the year following the year in which the investor reaches age 70½.

3. Individual Retirement Bonds

The sale of individual retirement bonds issued by the federal government was suspended after April 30, 1982.

4. Simplified Employee Pension (SEP)

A simplified employee pension (SEP) is a written arrangement that allows an investor’s employer to make deductible contributions to a traditional IRA (a SEP-IRA) set up for the employee to receive such contributions. Generally, distributions from SEP IRAs are subject to the withdrawal and tax rules that apply to traditional IRAs.
D. CONTRIBUTION LIMITS

There are limits and other rules that affect the amount that can be contributed to a traditional IRA. The following are some rules to keep in mind:

- Except as discussed below under Kay Bailey Hutchison Spousal IRA Limit, each spouse figures his or her limit separately, using his or her own compensation. This is the rule even in states with community property laws;
- Brokers' commissions paid in connection with a traditional IRA are subject to the contribution limit;
- Trustees' administrative fees are not subject to the contribution limit; and
- Contributions on an individual's behalf to a traditional IRA reduces his or her limit for contributions to a Roth IRA.

1. General Limit

The most that can be contributed to a traditional IRA is the smaller of the following amounts:

- $5,500 ($6,500 if you are 50 or older) in 2016 and 2017; or
- The individual's taxable compensation (defined above) for the year.

This is the most that can be contributed regardless of whether the contributions are to one or more traditional IRAs or whether all or part of the contributions are nondeductible.

Examples

George, who is 34 years old and single, earns $24,000 in 2016. His IRA contributions for 2016 are limited to $5,500.

Danny, an unmarried college student working part time, earns $1,500 in 2016. His IRA contributions for 2016 are limited to $1,500, the amount of his compensation.

2. More Than One IRA

If an individual has more than one traditional IRA, the limit applies to the total contributions made on the person's behalf to all of his or her traditional IRAs for the year.

3. Annuity or Endowment Contracts

If an individual invests in an annuity or endowment contract under an individual retirement annuity, no more than $5,500 ($6,500 if 50 or older) can be contributed toward its cost for the tax year, including the cost of life insurance coverage. If more than this amount is contributed, the annuity or endowment contract is disqualified.
4. Kay Bailey Hutchison Spousal IRA Limit

If an individual files a joint return and his or her taxable compensation is less than that of his or her spouse, the most that can be contributed for the year to his or her IRA is the smaller of the following two amounts:

- $5,500 ($6,500 if you are 50 or older), or
- The total compensation includable in the gross income of both the individual and his or her spouse for the year, reduced by the following two amounts: (a) the spouse’s IRA contribution for the year to a traditional IRA; and (b) any contributions for the year to a Roth IRA on behalf of the person’s spouse.

This means that the total combined contributions that can be made for the year to the individual’s IRA and his or her spouse’s IRA can be as much as $11,000 ($12,000 if only one of the two is 50 or older, or $13,000 if both are 50 or older) in 2016 (and 2017).

Note, however, that this traditional IRA limit is reduced by any contributions to a section 501(c)(18) plan (generally, a pension plan created before June 25, 1959, that is funded entirely by employee contributions).

**Example**

Kristin, a full-time student with no taxable compensation, marries Carl during the year. Neither was 50 by the end of 2016. For the year, Carl has taxable compensation of $30,000. He plans to contribute (and deduct) $5,500 to a traditional IRA. If he and Kristin file a joint return, each can contribute $5,500 to a traditional IRA. This is because Kristin, who has no compensation, can add Carl’s compensation, reduced by the amount of his IRA contribution, ($30,000 – $5,500 = $24,500) to her own compensation (-o-) to figure her maximum contribution to a traditional IRA. In her case, $5,500 is her contribution limit, because $5,500 is less than $24,500 (her compensation for purposes of figuring her contribution limit).

Generally, an individual’s filing status has no effect on the amount of allowable contributions to a traditional IRA. However, if during the year either the individual or his or her spouse was covered by a retirement plan at work, the individual’s deduction may be reduced or eliminated, depending on his or her filing status and income.
Example

Tom and Darcy are married and both are 53. They both work and each has a traditional IRA. Tom earned $2,800 and Darcy earned $48,000 in 2016. Because of the spousal IRA limit rule, even though Tom earned less than $6,500, they can contribute up to $6,500 to his IRA for 2016 if they file a joint return. They can contribute up to $6,500 to Darcy’s IRA. If they file separate returns, the amount that can be contributed to Tom’s IRA is limited to $2,800.

5. Less Than Maximum Contributions

A person who contributes less than the maximum allowed to his or her IRA one year may not contribute more than the applicable limit the following year or in any subsequent year to make up the difference.

6. More Than Maximum Contributions

If contributions to an individual’s IRA for a year were more than the limit, the person can apply the excess contribution in one year to a later year if the contributions for that later year are less than the maximum allowed for that year. However, a penalty or additional tax may apply.

E. TIMING OF CONTRIBUTIONS

Contributions can be made to a traditional IRA as soon as it has been established. Contributions must be in the form of money (cash, check, or money order). Property cannot be contributed. However, an individual may be able to transfer or roll over certain property from one retirement plan to another.

Contributions can be made to a traditional IRA for each year that the individual receives compensation and has not reached age 70½. For any year in which the individual does not work, contributions cannot be made to his or her IRA unless he or she receives alimony or files a joint return with a spouse who has compensation. Even if contributions cannot be made for the current year, the amounts contributed for years in which the individual did qualify can remain in their IRA. Contributions can resume for any years that the individual qualifies.

1. Due Date

Contributions can be made to a traditional IRA for a year at any time during the year or by the due date for filing his or her return for that year, not including extensions. For most people, this means, for example, that contributions for 2016 must be made by April 18, 2017, and contributions for 2017 must be made by April 16, 2018.

2. Age 70½ Rule

Contributions cannot be made to a traditional IRA for the year in which the individual reaches age 70½ or for any later year. An individual attains age 70½ on the date that is six calendar months after the 70th anniversary of his or her birth. If he or she was born on June 30, 1946, the 70th anniversary of his or her birth is June 30, 2016, and he or she attained age 70½ on December 30, 2016.
3. **Designating Year of Contribution**

If an amount is contributed to a traditional IRA between January 1 and April 15, the individual should tell his or her sponsor which year (the current year or the previous year) the contribution is for. If the individual does not tell the sponsor which year it is for, the sponsor can assume, and report to the IRS, that the contribution is for the current year (the year the sponsor received it).

**F. DEDUCTIONS**

Generally, an individual is entitled to deduct the lesser of:

- The contributions to his or her traditional IRA for the year; or
- The general limit (or the Kay Bailey Hutchison Spousal IRA limit, if applicable) explained above.

However, if the individual or his or her spouse was covered by an employer retirement plan, he or she may not be able to deduct this amount.

1. **Trustees’ Fees**

Trustees’ administrative fees that are billed separately and paid in connection with a traditional IRA are not deductible as IRA contributions. However, they may be deductible as a miscellaneous itemized deduction on Schedule A (Form 1040).

2. **Brokers’ Commissions**

These commissions are part of an IRA contribution and, as such, are deductible subject to the limits.

3. **Full Deduction**

If neither an individual nor his or her spouse was covered for any part of the year by an employer retirement plan, the individual can take a deduction for total contributions to one or more of his or her traditional IRAs of up to the lesser of:

- $5,500 ($6,500 if they are 50 or older); or
- 100% of his or her compensation.

This limit is reduced by any contributions made to a 501(c)(18) plan on the individual's behalf.

4. **Kay Bailey Hutchison Spousal IRA**

In the case of a married couple with unequal compensation who file a joint return, the deduction for contributions to the traditional IRA of the spouse with less compensation is limited to the lesser of:

- $5,500 ($6,500 if the spouse with the lower compensation is 50 or older), or
- The total compensation includible in the gross income of both spouses for the year reduced by the following three amounts.
• The IRA deduction for the year of the spouse with the greater compensation.
• Any designated nondeductible contribution for the year made on behalf of the spouse with the greater compensation.
• Any contributions for the year to a Roth IRA on behalf of the spouse with the greater compensation.

This limit is reduced by any contributions to a section 501(c)(18) plan on behalf of the spouse with the lesser compensation.

Note that if the individual in question was divorced or legally separated (and did not remarry) before the end of the year, he or she cannot deduct any contributions to his or her spouse’s IRA. After a divorce or legal separation, an individual can deduct only the contributions to his or her own IRA. The individual’s deductions are subject to the rules for single individuals.

5. Employer-Sponsored IRA

If an individual or his or her spouse was covered by an employer retirement plan at any time during the year for which contributions were made, the individual’s deduction may be further limited. Special rules apply to determine the tax years for which an individual was covered by an employer plan. These rules differ depending on whether the plan is a defined contribution plan or a defined benefit plan.

a. Defined Contribution Plan

Generally, an individual is covered by a defined contribution plan for a tax year if amounts are contributed or allocated to his or her account for the plan year that ends with or within that tax year.

A defined contribution plan is a plan that provides for a separate account for each person covered by the plan. In a defined contribution plan, the amount to be contributed to each participant’s account is spelled out in the plan. The level of benefits actually provided to a participant depends on the total amount contributed to that participant’s account and any earnings on those contributions. Types of defined contribution plans include profit-sharing plans, stock bonus plans, and money purchase pension plans.

<table>
<thead>
<tr>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Example 1.</strong> Company A has a money purchase pension plan. Its plan year is from July 1 to June 30. The plan provides that contributions must be allocated as of June 30. Bob, an employee, leaves Company A on December 31, 2015. The contribution for the plan year ending on June 30, 2016, is made February 15, 2017. Because an amount is contributed to Bob’s account for the plan year, Bob is covered by the plan for his 2016 tax year.</td>
</tr>
</tbody>
</table>
Examples (continued)

**Example 2.** Mickey was covered by a profit-sharing plan and left the company on December 31, 2015. The plan year runs from July 1 to June 30. Under the terms of the plan, employer contributions do not have to be made, but if they are made, they are contributed to the plan before the due date for filing the company’s tax return. Such contributions are allocated as of the last day of the plan year, and allocations are made to the accounts of individuals who have any service during the plan year. As of June 30, 2016, no contributions were made that were allocated to the June 30, 2016, plan year, and no forfeitures had been allocated within the plan year. In addition, as of that date, the company was not obligated to make a contribution for such plan year and it was impossible to determine whether or not a contribution would be made for the plan year. On December 31, 2016, the company decided to contribute to the plan for the plan year ending June 30, 2016. That contribution was made on February 15, 2017. Because an amount was allocated to Mickey’s account as of June 30, 2016, Mickey is an active participant in the plan for his 2017 tax year but not for his 2016 tax year.

If an amount is allocated to an individual’s account for a plan year, he or she is covered by that plan even if he or she has no vested interest in (legal right to) the account.

**b. Defined Benefit Plan**

If an individual is eligible to participate in his or her employer’s defined benefit plan for the plan year that ends within his or her tax year, the individual is covered by the plan. This rule applies even if the employee:

- Declined to participate in the plan;
- Did not make a required contribution; or
- Did not perform the minimum service required to accrue a benefit for the year.

A defined benefit plan is any plan that is not a defined contribution plan. In a defined benefit plan, the level of benefits to be provided to each participant is spelled out in the plan. The plan administrator figures the amount needed to provide those benefits and those amounts are contributed to the plan. Defined benefit plans include pension plans and annuity plans.

**Example**

Nick, an employee of Company B, is eligible to participate in Company B’s defined benefit plan, which has a July 1 to June 30 plan year. Nick leaves Company B on December 31, 2015. Since Nick is eligible to participate in the plan for its year ending June 30, 2016, he is covered by the plan for his 2016 tax year.
If an individual accrues a benefit for a plan year, he or she is covered by that plan even if he or she has no vested interest in the accrual.

c. Situations in Which Individual Is Not Covered

Unless an individual is covered by another employer plan, he or she is not covered by an employer plan if the individual is in one of the situations described below:

- **Social security or railroad retirement.** Coverage under social security or railroad retirement is not coverage under an employer retirement plan.

- **Benefits from previous employer’s plan.** If an individual receives retirement benefits from a previous employer’s plan, he or she is not covered by that plan.

- **Reservists.** If the only reason an individual participates in a plan is because he or she is a member of a reserve unit of the armed forces, he or she may not be covered by the plan. The individual is not covered by the plan if both of the following conditions are met:
  
  - The plan he or she participates in is established for its employees by: (a) the United States, (b) state or political subdivision of a state, or an instrumentality of either (a) or (b).
  
  - The individual did not serve more than 90 days on active duty during the year (not counting duty for training).

- **Volunteer firefighters.** If the only reason an individual participates in a plan is because he or she is a volunteer firefighter, he or she may not be covered by the plan. The individual is not covered by the plan if both of the following conditions are met:
  
  - The plan they participate in is established for its employees by: (a) the United States, (b) state or political subdivision of a state, or (c) an instrumentality of either (a) or (b) above; and
  
  - The individual’s accrued retirement benefits at the beginning of the year will not provide more than $1,800 per year at retirement.

6. Limit If Covered By Employer Plan

As discussed earlier, the deduction individuals can take for contributions made to their traditional IRA depends on whether they or their spouse was covered for any part of the year by an employer retirement plan. The allowable deduction is also affected by how much income the individual had and by his or her filing status. The deduction may also be affected by any social security benefits received.

If either the individual or his or her spouse was covered by an employer retirement plan, he or she may be entitled to only a partial (reduced) deduction or no deduction at all, depending on income and filing status. An individual’s deduction begins to decrease (phase out) when his or her income rises above a certain amount and is eliminated altogether when it reaches a higher amount. These amounts vary depending on an individual’s filing status.
The amount of any reduction in the limit on an individual’s IRA deduction (phaseout) depends on whether the individual or his or her spouse was covered by an employer retirement plan.

If an individual is covered by an employer retirement plan and the individual did not receive any social security retirement benefits, the individual’s IRA deduction may be reduced or eliminated depending on his or her filing status and modified AGI. For example, for 2016 – for individuals covered by a retirement plan at work – their IRA deduction will not be reduced unless their modified AGI is:

- More than $61,000 but less than $71,000 for a single individual (or head of household);
- More than $98,000 but less than $118,000 for a married couple filing a joint return (or a qualifying widow(er)); or
- Less than $10,000 for a married individual filing a separate return.

The IRA deduction is completely eliminated above these modified AGIs. These amounts may be increased for years after 2016.

G. NONDEDUCTIBLE CONTRIBUTIONS

Although an individual’s deduction for IRA contributions may be reduced or eliminated, contributions can be made to an IRA of up to the general limit or, if it applies, the Kay Bailey Hutchison Spousal IRA limit. The difference between an individual’s total permitted contributions and his or her IRA deduction, if any, is the individual’s nondeductible contribution.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tony is 29 years old and single. In 2016, he was covered by a retirement plan at work. His salary is $67,000. His modified adjusted gross income (modified AGI) is $80,000. Tony makes a $5,500 IRA contribution for 2016. Because he was covered by a retirement plan and his modified AGI is above $71,000, he cannot deduct his $5,500 IRA contribution. He must designate this contribution as a nondeductible contribution by reporting it on Form 8606.</td>
</tr>
</tbody>
</table>

Individuals do not have to designate a contribution as nondeductible until they file their tax return. When it is filed, the individual can even designate otherwise deductible contributions as nondeductible contributions.

1. Failure to Report Nondeductible Contributions

If an individual fails to report nondeductible contributions, all of the contributions to his or her traditional IRA will be treated as deductible. All distributions from the individual’s IRA will be taxed unless the individual can show, with satisfactory evidence, that nondeductible contributions were made.

2. Penalty for Overstatement

If an individual overstates the amount of nondeductible contributions on his or her Form 8606 for any tax
year, the individual must pay a penalty of $100 for each overstatement, unless it was due to reasonable cause. There is also a $50 penalty for failure to file Form 8606, unless the individual can provide that the failure was due to reasonable cause.

3. Tax on Earnings on Nondeductible Contributions

As long as contributions are within the contribution limits, none of the earnings or gains on contributions (deductible or nondeductible) will be taxed until they are distributed.

4. Cost Basis

Individuals will have a cost basis in their traditional IRA if they made any nondeductible contributions. Their cost basis is the sum of the nondeductible contributions to their IRA minus any withdrawals or distributions of nondeductible contributions. Commonly, distributions from a traditional IRA will include both taxable and nontaxable (cost basis) amounts.

H. INHERITED IRAS

Individuals who inherit a traditional IRA are referred to as a beneficiary. A beneficiary can be any person or entity the owner chooses to receive the benefits of the IRA after he or she dies. Beneficiaries of a traditional IRA must include in their gross income any taxable distributions they receive.

1. Inherited from Spouse

Individuals who inherit a traditional IRA from a spouse generally have the following three choices:

- Treat it as their own IRA by designating themselves as the account owner;
- Treat it as their own by rolling it over into their traditional IRA, or to the extent it is taxable, into a:
  - Qualified employer plan,
  - Qualified employee annuity plan (section 403(a) plan),
  - Tax-sheltered annuity plan (section 403(b) plan),
  - Deferred compensation plan of a state or local government (section 457 plan), or
- Treat themselves as the beneficiary rather than treating the IRA as their own.

2. Inherited from Someone Other Than Spouse

If an individual inherits a traditional IRA from anyone other than his or her deceased spouse, the individual cannot treat the inherited IRA as his or her own. This means that the individual cannot make any contributions to the IRA. It also means he or she cannot roll over any amounts into or out of the inherited IRA. However, the individual can make a trustee-to-trustee transfer as long as the IRA into which amounts are being moved is set up and maintained in the name of the deceased IRA owner for the benefit of the individual as beneficiary.
Like the original owner, the individual generally will not owe tax on the assets in the IRA until he or she receives distributions from it. The individual must begin receiving distributions from the IRA under the rules for distributions that apply to beneficiaries.

3. IRA with Basis

If an individual inherits a traditional IRA from a person who had a basis in the IRA because of nondeductible contributions, that basis remains with the IRA. With very few exceptions, the beneficiary cannot combine this basis with any basis he or she has in his or her own traditional IRA(s) or any basis in traditional IRA(s) the individual inherited from other decedents. If the individual takes distributions from both an inherited IRA and his or her own IRA, and each has basis, the individual must complete separate Forms 8606 to determine the taxable and nontaxable portions of those distributions.

4. Federal Estate Tax Deduction

A beneficiary may be able to claim a deduction for estate tax resulting from certain distributions from a traditional IRA. The beneficiary can deduct the estate tax paid on any part of a distribution that is income in respect of a decedent. He or she can take the deduction for the tax year the income is reported.

Any taxable part of a distribution that is not income in respect of a decedent is a payment the beneficiary must include in income. However, the beneficiary cannot take any estate tax deduction for this part.

A surviving spouse can roll over the distribution to another traditional IRA and avoid including it in income for the year received.

I. MOVING RETIREMENT PLAN ASSETS

Individuals can transfer, tax free, assets (money or property) from other retirement programs (including traditional IRAs) to a traditional IRA. The following types of transfers are permissible:

- Transfers from one trustee to another;
- Rollovers; and
- Transfers incident to a divorce.

1. Transfers to Roth IRAs

Under certain conditions, individuals can move assets from a traditional IRA or a designated Roth account to a Roth IRA.

2. Trustee-to-Trustee Transfer

A transfer of funds in an individual’s traditional IRA from one trustee directly to another, either at the individual’s request or at the trustee’s request, is not a rollover. Because there is no distribution to the owner, the transfer is tax-free. Because it is not a rollover, it is not affected by the 1-year waiting period required between rollovers.
3. **Rollovers**

Generally, a rollover is a tax-free distribution to the owner of cash or other assets from one retirement plan that the owner contributes to another retirement plan. The contribution to the second retirement plan is called a “rollover contribution.” An amount rolled over tax free from one retirement plan to another is generally includible in income when it is distributed from the second plan. It is permissible to roll over amounts from the following plans to a traditional IRA:

- A traditional IRA;
- An employer’s qualified retirement plan for its employees;
- A deferred compensation plan of a state or local government (section 457 plan); or
- A tax-sheltered annuity plan (section 403 plan).

**Note**

Beginning in 2015, you will only be able to make one tax-free rollover in a 1-year period from an IRA to another or same IRA regardless of the number of IRAs you own.

Individuals cannot deduct a rollover contribution. It must, however, be reported on the individual’s tax return. In addition, a written explanation of rollover treatment must be given to the owner by the plan (other than an IRA) making the distribution.

Individuals may be able to roll over, tax free, a distribution from their traditional IRA into a qualified plan. These plans include the Federal Thrift Savings Fund (for federal employees), deferred compensation plans of state or local governments (section 457 plans), and tax-sheltered annuity plans (section 403(b) plans). The part of the distribution that an individual can roll over is the part that would otherwise be taxable (includible in their income). Qualified plans may, but are not required to, accept such rollovers.

If an individual rolls over a distribution from an IRA into an eligible retirement plan other than an IRA, ordinarily, when the individual has basis in his or her IRAs, any distribution is considered to include both nontaxable and taxable amounts. Without a special rule, the nontaxable portion of such a distribution could not be rolled over. However, a special rule treats a distribution that is rolled over into an eligible retirement plan as including only otherwise taxable amounts if the amount the individual either leaves in his or her IRAs or does not roll over is at least equal to his or her basis. The effect of this is to make the amount in the individual’s traditional IRAs that he or she can roll over to a qualified plan as large as possible.

4. **Time Limit for Making a Rollover Contribution**

Individuals generally must make the rollover contribution by the 60th day after the day they receive the distribution from their traditional IRA or their employer’s plan. The IRS may waive the 60-day requirement...
where the failure to do so would be against equity or good conscience, such as in the event of a casualty, disaster, or other event beyond the individual’s reasonable control.

In the absence of a waiver, amounts not rolled over within the 60-day period do not qualify for tax-free rollover treatment. Individuals must treat them as a taxable distribution from either their IRA or their employer’s plan. These amounts are taxable in the year distributed, even if the 60-day period expires in the next year. Individuals may also have to pay a 10% additional tax on early distributions.

Unless there is a waiver or an extension of the 60-day rollover period, any contribution an individual makes to his or her IRA more than 60 days after the distribution is a regular contribution, not a rollover contribution.

The 60-day rollover requirement is waived automatically only if all of the following apply:

- The financial institution receives the funds on the owner’s behalf before the end of the 60-day rollover period;
- The owner followed all the procedures set by the financial institution for depositing the funds into an eligible retirement plan within the 60-day period (including giving instructions to deposit the funds into an eligible retirement plan);
- The funds are not deposited into an eligible retirement plan within the 60-day rollover period solely because of an error on the part of the financial institution;
- The funds are deposited into an eligible retirement plan within 1 year from the beginning of the 60-day rollover period; or
- If it would have been a valid rollover if the financial institution had deposited the funds as instructed.

Individuals who do not qualify for an automatic waiver may apply to the IRS for a waiver of the 60-day rollover requirement. In determining whether to grant a waiver, the IRS will consider all relevant facts and circumstances, including:

- Whether errors were made by the financial institution (other than those described under automatic waiver, above),
- Whether the individual was unable to complete the rollover due to death, disability, hospitalization, incarceration, restrictions imposed by a foreign country or postal error,
- Whether the individual used the amount distributed (for example, in the case of payment by check, whether he or she cashed the check), and
- How much time has passed since the date of distribution.

The rules regarding the amount that can be rolled over within the 60-day time period also apply to the amount that can be deposited due to a waiver. For example, if an individual received $6,000 from his or her IRA, the most that he or she can deposit into an eligible retirement plan due to a waiver is $6,000.
5. **Rollover from One IRA into Another**

An individual can withdraw, tax free, all or part of the assets from one traditional IRA if he or she reinvests them within 60 days in the same or another traditional IRA. Because this is a rollover, the individual cannot deduct the amount that he or she reinvests in an IRA.

An individual may be able to treat a contribution made to one type of IRA as having been made to a different type of IRA. This is called “recharacterizing” the contribution.

**a. Waiting Period Between Rollovers**

Generally, if an individual makes a tax-free rollover of any part of a distribution from a traditional IRA, he or she cannot, within a 1-year period, make a tax-free rollover of any later distribution from that same IRA. The individual also cannot make a tax-free rollover of any amount distributed, within the same 1-year period, from the IRA into which he or she made the tax-free rollover. The 1-year period begins on the date the individual receives the IRA distribution, not on the date he or she rolls it over into an IRA.

Beginning in 2015, an individual can make only one rollover from an IRA to another (or the same) IRA in any 1-year period regardless of the number of IRAs he or she owns. The limit will apply by aggregating all of an individual’s IRAs, including SEP and SIMPLE IRAs as well as traditional and Roth IRAs, effectively treating them as one IRA for purposes of the limit. However, trustee-to-trustee transfers between IRAs are not limited and rollovers from traditional IRAs to Roth IRAs (conversions) are not limited.

**b. Partial Rollovers**

If an individual withdraws assets from a traditional IRA, he or she can roll over part of the withdrawal tax-free and keep the rest of it. The amount the individual keeps will generally be taxable (except for the part that is a return of nondeductible contributions). The amount kept may be subject to the 10% additional tax on early distributions. Amounts that must be distributed during a particular year under the required distribution rules are not eligible for rollover treatment.

6. **Withholding Requirement**

Generally, if an eligible rollover distribution is paid directly to an individual, the payer must withhold 20% of it. This applies even if the individual plans to roll over the distribution to a traditional IRA. Withholding can be avoided by choosing a direct rollover option.

The 20% withholding requirement does not apply to distributions that are not eligible rollover distributions. However, other withholding rules apply to these distributions. The rules that apply depend on whether the distribution is a periodic distribution or a nonperiodic distribution. For either of these types of distributions, individuals can still choose not to have tax withheld.

7. **Direct Rollover Option**

An employer’s qualified plan must give individuals the option to have any part of an eligible rollover distribution paid directly to a traditional IRA. The plan is not required to give employees this option if their eligible rollover distributions are expected to total less than $200 for the year.
If an individual chooses the direct rollover option, no tax is withheld from any part of the designated distribution that is directly paid to the trustee of the traditional IRA. If any part is paid to the individual, the payer must withhold 20% of that part’s taxable amount.

If an individual decides to roll over any part of a distribution, the direct rollover option will generally be to his or her advantage. This is because the individual will not have 20% withholding or be subject to the 10% additional tax under that option. If an individual has a lump-sum distribution and does not plan to roll over any part of it, the distribution may be eligible for special tax treatment that could lower the individual’s tax for the distribution year.

The once-a-year limit on IRA-to-IRA rollovers does not apply to eligible rollover distributions from an employer plan. Individuals can roll over more than one distribution from the same employer plan within a year.

8. Life Insurance Contract

Individuals cannot roll over a life insurance contract from a qualified plan into a traditional IRA.

9. Keogh Plans and Rollovers

If an individual is self-employed, he or she is generally treated as an employee for rollover purposes. Consequently, if he or she receives an eligible rollover distribution from a Keogh plan (a qualified plan with at least one self-employed participant), the individual can roll over all or part of the distribution (including a lump-sum distribution) into a traditional IRA.

10. Distribution from a Tax-Sheltered Annuity

If an individual receives an eligible rollover distribution from a tax-sheltered annuity plan (section 403(b) plan), he or she can roll it over into a traditional IRA.

11. Transfers Incident to Divorce

If an interest in a traditional IRA is transferred from a spouse or former spouse to an individual by a divorce or separate maintenance decree or a written document related to such a decree, the interest in the IRA, starting from the date of the transfer, is treated as that individual’s IRA. The transfer is tax free.

There are two commonly-used methods of transferring IRA assets to a spouse or former spouse. The methods are: (1) changing the name on the IRA and (2) making a direct transfer of IRA assets.

If an individual’s spouse or former spouse is allowed to keep his or her portion of the IRA assets in that individual’s existing IRA, the individual can direct the trustee to transfer the assets the individual is permitted to keep directly to a new or existing traditional IRA set up in his or her name. The name on the IRA containing the individual’s spouse’s or former spouse’s portion of the assets would then be changed to show his or her ownership. If the transfer results in a change in the basis of the traditional IRA of either spouse, both spouses must file Form 8606 and follow the directions in the instructions for that form.
II. CONVERTING FROM ANY TRADITIONAL IRA INTO A ROTH IRA

A. ALLOWABLE CONVERSIONS

Individuals can withdraw all or part of the assets from a traditional IRA and reinvest them (within 60 days) in a Roth IRA. The amount that an individual withdraws and timely contributes (convert) to the Roth IRA is called a conversion contribution. If properly (and timely) rolled over, the 10% additional tax on early distributions will not apply. However, a part or all of the distribution from his or her traditional IRA may be included in gross income and subjected to ordinary income tax.

Individuals must roll over into the Roth IRA the same property they received from the traditional IRA. They can roll over part of the withdrawal into a Roth IRA and keep the rest of it. The amount the individual keeps will generally be taxable (except for the part that is a return of nondeductible contributions) and may be subject to the 10% additional tax on early distributions.

1. Periodic Distributions

If an individual has started taking substantially equal periodic payments from a traditional IRA, he or she can convert the amounts in the traditional IRA to a Roth IRA and then continue the periodic payments. The 10% additional tax on early distributions will not apply even if the distributions are not qualified distributions (as long as they are part of a series of substantially equal periodic payments).

2. Required Distributions

Individuals cannot convert amounts that must be distributed from their traditional IRA for a particular year (including the calendar year in which they reach age 70½) under the required distribution rules.

3. Income

Individuals must include in their gross income distributions from a traditional IRA that they would have had to include in income if they had not converted them into a Roth IRA. They are not required to include in gross income, however, any part of a distribution from a traditional IRA that is a return of their basis.

B. RECHARACTERIZATIONS

Individuals may be able to treat a contribution made to one type of IRA as having been made to a different type of IRA. This is called recharacterizing the contribution. To recharacterize a contribution, an individual generally must have the contribution transferred from the first IRA (the one to which it was made) to the second IRA in a trustee-to-trustee transfer. If the transfer is made by the due date (including extensions) for the individual’s tax return for the year during which the contribution was made, the individual can elect to treat the contribution as having been originally made to the second IRA instead of to the first IRA.

1. Requirements

If an individual chooses to recharacterize his or her contribution, the individual must do all three of the following:
• Include in the transfer any net income allocable to the contribution. If there was a loss, the net income the individual must transfer may be a negative amount;

• Report the recharacterization on the individual’s tax return for the year during which the contribution was made; and

• Treat the contribution as having been made to the second IRA on the date that it was actually made to the first IRA.

2. No Deduction Allowed

Individuals may not deduct the contribution to the first IRA. Any net income they transfer with the recharacterized contribution is treated as earned in the second IRA. The contribution will not be treated as having been made to the second IRA to the extent any deduction was allowed for the contribution to the first IRA.

3. Conversion by Rollover from Traditional to Roth IRA

Assume an individual receives a distribution from a traditional IRA in one tax year, then rolls it over into a Roth IRA within 60 days of the distribution from the traditional IRA but in the next year. For recharacterization purposes, the individual would treat this transaction as a contribution to the Roth IRA in the year of the distribution from the traditional IRA.

4. Effect of Previous Tax-Free Transfers

If an amount has been moved from one IRA to another in a tax-free transfer, such as a rollover, the individual generally cannot recharacterize the amount that was transferred. Roth IRA conversion contributions from a SEP-IRA or SIMPLE IRA can be recharacterized to a SEP-IRA or SIMPLE IRA (including the original SEP-IRA or SIMPLE IRA). If an individual mistakenly rolls over or transfers an amount from a traditional IRA to a SIMPLE IRA, he or she can later recharacterize the amount as a contribution to another traditional IRA.

5. Recharacterizing Excess Contributions

Individuals can recharacterize only actual contributions. If an individual is applying excess contributions for prior years as current contributions, they can recharacterize them only if the recharacterization would still be timely with respect to the tax year for which the applied contributions were actually made.

Example

Jacob contributed more than he was entitled to in 2016. Jacob cannot recharacterize the excess contributions he made in 2016 after April 18, 2017, because contributions after that date are no longer timely for 2016.
6. **Recharacterizing Employer Contributions**

Individuals cannot recharacterize employer contributions (including elective deferrals) under a SEP or SIMPLE plan as contributions to another IRA.

7. **Recharacterization Not Counted as Rollover**

The recharacterization of a contribution is not treated as a rollover for purposes of the 1-year waiting period. This is true even if the contribution would have been treated as a rollover contribution by the second IRA if it had been made directly to the second IRA rather than as a result of a recharacterization of a contribution to the first IRA.

**C. RECONVERSIONS**

Individuals cannot convert and reconvert an amount during the same taxable year or, if later, during the 30-day period following a recharacterization. If an individual reconverts during either of these periods, it will be a failed conversion.

**D. RECHARACTERIZATION OF CONTRIBUTIONS**

To recharacterize a contribution, individuals must notify both the trustee of the first IRA (the one to which the contribution was actually made) and the trustee of the second IRA (the one to which the contribution is being moved) that the person has elected to treat the contribution as having been made to the second IRA rather than the first. The individual must make the notifications by the date of the transfer. Only one notification is required if both IRAs are maintained by the same trustee. The notification(s) must include all of the following information:

- The type and amount of the contribution to the first IRA that is to be recharacterized;
- The date on which the contribution was made to the first IRA and the year for which it was made;
- A direction to the trustee of the first IRA to transfer in a trustee-to-trustee transfer the amount of the contribution and any net income (or loss) allocable to the contribution to the trustee of the second IRA;
- The name of the trustee of the first IRA and the name of the trustee of the second IRA; and
- Any additional information needed to make the transfer.

1. **Timing**

The election to recharacterize and the transfer must both take place on or before the due date (including extensions) for filing your tax return for the year for which the contribution was made to the first IRA.
Ordinarily an individual must choose to recharacterize a contribution by the due date of the return or the due date plus extensions. However, if the individual misses this deadline, he or she can still recharacterize a contribution if:

- The individual’s return was timely filed for the year the choice should have been made; and
- The individual takes appropriate corrective action within 6 months from the due date of his or her return excluding extensions.

Appropriate corrective action consists of:

- Notifying the trustee(s) of their intent to recharacterize;
- Providing the trustee with all necessary information; and
- Having the trustee transfer the contribution.

Once this is done, the individual must amend his or her return to show the recharacterization. The individual has until the regular due date for amending a return to do this.

An election to recharacterize can be made on behalf of a deceased IRA owner by the executor, administrator, or other person responsible for filing the decedent’s final income tax return.

2. **Election Cannot Be Changed**

After the transfer has taken place, an individual cannot change his or her election to recharacterize.

3. **Same Trustee**

Recharacterizations made with the same trustee can be made by redesignating the first IRA as the second IRA, rather than transferring the account balance.

**E. REPORTING A RECHARACTERIZATION**

If an individual elects to recharacterize a contribution to one IRA as a contribution to another IRA, the individual must report the recharacterization on his or her tax return as directed by Form 8606 and its instructions. The individual must treat the contribution as having been made to the second IRA.
Example

On June 1, 2016, Christine properly and timely converted her traditional IRA to a Roth IRA. In December, Christine decided to recharacterize the conversion and move the funds to a traditional IRA. In January 2017, to make the necessary adjustment to remove the conversion, Christine opened a traditional IRA with the same trustee. Also in January 2017, she instructed the trustee of the Roth IRA to make a trustee-to-trustee transfer of the conversion contribution made to the Roth IRA (including net income allocable to it since the conversion) to the new traditional IRA. She also notified the trustee that she was electing to recharacterize the contribution to the Roth IRA and treat it as if it had been contributed to the new traditional IRA. Because of the recharacterization, Christine has no taxable income from the conversion to report for 2016, and the resulting rollover to a traditional IRA is not treated as a rollover for purposes of the one-rollover-per-year rule.

If an individual has more than one IRA, he or she must figure the amount to be recharacterized only on the account from which he or she withdraws the contribution.

III. DISTRIBUTIONS

A. WHEN CAN ASSETS BE WITHDRAWN OR USED

Individuals can withdraw or use their traditional IRA assets at any time. However, a 10% additional tax generally applies if they withdraw or use IRA assets before they reach age 59½.

Individuals generally can make a tax-free withdrawal of contributions if they do it before the due date for filing their tax return for the year in which they made them. This means that even if they are under age 59½, the 10% additional tax may not apply.

B. WHEN ASSETS MUST BE WITHDRAWN

Individuals cannot keep funds in a traditional IRA indefinitely. Eventually they must be distributed. If there are no distributions, or if the distributions are not large enough, the owner may have to pay a 50% excise tax on the amount not distributed as required. The requirements for distributing IRA funds differ, depending on whether an individual is the IRA owner or the beneficiary of a decedent's IRA. Note also that amounts that must be distributed (required minimum distributions) during a particular year are not eligible for rollover treatment.

C. IRA OWNERS

If an individual is the owner of a traditional IRA, he or she must start receiving distributions from the IRA by April 1 of the year following the year in which he or she reaches age 70½. April 1 of the year following the year in which he or she reaches age 70½ is referred to as the required beginning date.
Persons must receive at least a minimum amount for each year starting with the year they reach age 70½ (their 70½ year). If the individual did not receive that minimum amount in his or her 70½ year, then the individual must receive distributions for his or her 70½ year by April 1 of the next year.

If an IRA owner dies after reaching age 70½, but before April 1 of the next year, no minimum distribution is required because death occurred before the required beginning date.

Even if an individual begins receiving distributions before he or she reaches age 70½, the individual must still begin calculating and receiving required minimum distributions by his or her required beginning date.

1. More Than Minimum Received

If, in any year, an individual receives more than the required minimum distribution for that year, he or she will not receive credit for the additional amount when determining the minimum required distributions for future years. This does not mean that the person does not reduce his or her IRA account balance. It means that if he or she receives more than his or her required minimum distribution in one year, the individual cannot treat the excess (the amount that is more than the required minimum distribution) as part of his or her required minimum distribution for any later year. However, any amount distributed in an individual’s 70½ year will be credited toward the amount that must be distributed by April 1 of the following year.

2. Distributions After the Required Beginning Date

The required minimum distribution for any year after the year the owner of an IRA turns 70½ must be made by December 31 of that later year.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Martin reaches age 70½ on August 20, 2016. For 2016, he must receive the required minimum distribution from his IRA by April 1, 2017. Martin must receive the required minimum distribution for 2017 by December 31, 2017.</td>
</tr>
</tbody>
</table>

D. FIGURING THE OWNER’S REQUIRED MINIMUM DISTRIBUTION

An individual’s required minimum distribution for each year can be figured by dividing the IRA account balance (defined next) as of the close of business on December 31 of the preceding year by the applicable distribution period or life expectancy.

1. IRA Account Balance

The IRA account balance is the amount in the IRA at the end of the year preceding the year for which the required minimum distribution is being figured. Contributions increase the account balance in the year they are made. If a contribution for last year is not made until after December 31 of last year, it increases the account balance for this year, but not for last year. Contributions made after December 31 of last year in determining in an individual’s required minimum distribution for this year should be disregarded.
Distributions reduce the account balance in the year they are made. If a distribution for last year is not made until after December 31 of last year, it reduces the account balance for this year, but not for last year. Disregard distributions made after December 31 of last year in determining an individual’s required minimum distribution for this year.

### Examples

**Example 1.** Laura was born on October 1, 1945. She is an unmarried participant in a qualified defined contribution plan. She reaches age 70½ in 2016. Her required beginning date is April 1, 2017. As of December 31, 2015, her account balance was $26,500. No rollover or recharacterization amounts were outstanding. The applicable distribution period for someone her age (71) is 26.5 years. Her required minimum distribution for 2016 is $1,000 ($26,500 ÷ 26.5). That amount is distributed to her on April 1, 2017.

**Example 2.** Joe, born October 1, 1945, reached 70½ in 2016. His wife (his beneficiary) turned 56 in September 2016. He must begin receiving distributions by April 1, 2017. Joe’s IRA account balance as of December 31, 2015, is $30,100. Because Joe’s wife is more than 10 years younger than Joe and is the sole beneficiary of his IRA, Joe uses Table II. Based on their ages at year end (December 31, 2016), the joint life expectancy for Joe (age 71) and his wife (age 56) is 30.1 years. The required minimum distribution for 2016, Joe’s first distribution year (his 70½ year), is $1,000 ($30,100 ÷ 30.1). This amount is distributed to Joe on April 1, 2017.

2. **Distribution Period**

This is the maximum number of years over which an individual is allowed to take distributions from his or her IRA.

3. **Life Expectancy**

The IRS publishes life expectancy tables for use in this calculation.

### E. IRA BENEFICIARIES

The rules for determining required minimum distributions for beneficiaries depend on whether the beneficiary is the surviving spouse, another individual, or not an individual, or if the owner died before the required beginning date.

1. **Surviving Spouse**

If the beneficiary is the surviving spouse who is the sole beneficiary of his or her deceased spouse’s IRA, the beneficiary may elect to be treated as the owner and not as the beneficiary. If he or she elects to be treated as the owner, the beneficiary must determine the required minimum distribution (if any) as if he or she were the owner beginning with the year he or she elects or is deemed to be the owner.
However, if the individual becomes the owner in the year his or her deceased spouse died, he or she is not required to determine the required minimum distribution for that year using his or her own life; rather, the beneficiary can take the deceased owner’s required minimum distribution for that year (to the extent it was not already distributed to the owner before his or her death).

2. Date the Designated Beneficiary Is Determined

Generally, the designated beneficiary is determined on September 30 of the calendar year following the calendar year of the IRA owner’s death. In order to be a designated beneficiary, an individual must be a beneficiary as of the date of death. Any person who was a beneficiary on the date of the owner’s death, but is not a beneficiary on September 30 of the calendar year following the calendar year of the owner’s death (because, for example, he or she disclaimed entitlement or received his or her entire benefit), will not be taken into account in determining the designated beneficiary. An individual may be designated as a beneficiary either by the terms of the plan or, if the plan permits, by affirmative election by the employee specifying the beneficiary.

If a person who is a beneficiary as of the owner’s date of death dies before September 30 of the year following the year of the owner’s death without disclaiming entitlement to benefits, that individual, rather than his or her successor beneficiary, continues to be treated as a beneficiary for determining the distribution period.

3. Death of a Beneficiary

In general, the beneficiaries of a deceased beneficiary must continue to take the required minimum distributions after the deceased beneficiary’s death, based on the distribution schedule established by that beneficiary under the rules in the following paragraphs. The beneficiaries of a deceased beneficiary do not calculate required minimum distributions using their own life expectancies.

If the designated beneficiary is the owner’s surviving spouse, and he or she dies before he or she was required to begin receiving distributions, the surviving spouse will be treated as if he or she were the owner of the IRA. However, this rule does not apply to the surviving spouse of a surviving spouse.

**F. MISCELLANEOUS RULES FOR REQUIRED MINIMUM DISTRIBUTIONS**

1. Installments Allowed

The yearly required minimum distribution can be taken in a series of installments (monthly, quarterly, etc.) as long as the total distributions for the year are at least as much as the minimum required amount.

2. More Than One IRA

If an individual has more than one traditional IRA, he or she must determine a separate required minimum distribution for each IRA. However, the individual can total these minimum amounts and take the total from any one or more of the IRAs.
Example

Sara, born August 1, 1945, became 70½ on February 1, 2016. She has two traditional IRAs. She must begin receiving her IRA distributions by April 1, 2017. On December 31, 2015, Sara’s account balance from IRA A was $10,000; her account balance from IRA B was $20,000. Sara’s brother, age 64 as of his birthday in 2016, is the beneficiary of IRA A. Her husband, age 78 as of his birthday in 2016, is the beneficiary of IRA B.

Sara’s required minimum distribution from IRA A is $377 ($10,000 ÷ 26.5 (the distribution period for age 71 per Table III)). The amount of the required minimum distribution from IRA B is $755 ($20,000 ÷ 26.5). The amount that must be withdrawn by Sara from her IRA accounts by April 1, 2017 is $1,132 ($377 + $755).

3. More Than Minimum Received

If, in any year, an individual receives more than the required minimum amount for that year, the individual will not receive credit for the additional amount when determining the minimum required amounts for future years. This does not mean that the individual does not reduce his or her IRA account balance. It means that if he or she receives more than his or her required minimum distribution in one year, he or she cannot treat the excess (the amount that is more than the required minimum distribution) as part of his or her required minimum distribution for any later year. However, any amount distributed in his or her 70½ year will be credited toward the amount that must be distributed by April 1 of the following year.

Example

Justin became 70½ on December 15, 2016. Justin’s IRA account balance on December 31, 2015, was $38,400. He figured his required minimum distribution for 2016 as $1,401 ($38,400 ÷ 27.4). By December 31, 2016, he had actually received distributions totaling $3,600, $2,199 more than was required. Justin cannot use that $2,199 to reduce the amount he is required to withdraw for 2017, but his IRA account balance is reduced by the full $3,600 to figure his required minimum distribution for 2017. Justin’s reduced IRA account balance on December 31, 2016, was $34,800. Justin figured his required minimum distribution for 2017 as $1,313 ($34,800 ÷ 26.5). During 2017, he must receive distributions of at least that amount.

4. Multiple Individual Beneficiaries

If as of September 30 of the year following the year in which the owner dies there is more than one beneficiary, the beneficiary with the shortest life expectancy will be the designated beneficiary if both of the following apply:

- All of the beneficiaries are individuals; and
• The account or benefit has not been divided into separate accounts or shares for each beneficiary.

5. Separate Accounts

A single IRA can be split into separate accounts or shares for each beneficiary. These separate accounts or shares can be established at any time, either before or after the owner’s required beginning date. Generally, these separate accounts or shares are combined for purposes of determining the minimum required distribution. However, these separate accounts or shares will not be combined for required minimum distribution purposes after the death of the IRA owner if the separate accounts or shares are established by the end of the year following the year of the IRA owner’s death.

The separate account rules cannot be used by beneficiaries of a trust.

6. Trust as Beneficiary

A trust cannot be a designated beneficiary even if it is a named beneficiary. However, the beneficiaries of a trust will be treated as having been designated as beneficiaries for purposes of determining required minimum distributions after the owner’s death if all of the following are true:

• The trust is a valid trust under state law, or would be but for the fact that there is no corpus;
• The trust is irrevocable or will, by its terms, become irrevocable upon the death of the owner;
• The beneficiaries of the trust who are beneficiaries with respect to the trust’s interest in the owner’s benefit are identifiable from the trust instrument;
• The trustee of the trust provides the IRA custodian or trustee with the documentation required by that custodian or trustee. The trustee of the trust should contact the IRA custodian or trustee for details on the documentation required for a specific plan.

The deadline for providing the beneficiary documentation to the IRA trustee, custodian, or issuer is October 31 of the year following the year of the owner’s death. If the beneficiary of the trust is another trust and the above requirements for both trusts are met, the beneficiaries of the other trust will be treated as having been designated as beneficiaries for purposes of determining the distribution period. The separate account rules cannot be used by beneficiaries of a trust.

G. TAXATION OF DISTRIBUTIONS

In general, distributions from a traditional IRA are taxable in the year they are received. Distributions from traditional IRAs included in income are taxed as ordinary income.

1. Distributions Fully or Partly Taxable

Distributions from a traditional IRA may be fully or partly taxable, depending on whether the individual’s IRA includes any nondeductible contributions.
If only deductible contributions were made to an individual’s traditional IRA (or IRAs, if he or she has more than one), the individual has no basis in his or her IRA. Because the individual has no basis in his or her IRA, any distributions are fully taxable when received.

If an individual made nondeductible contributions to any of his or her traditional IRAs, the individual has a cost basis (investment in the contract) equal to the amount of those contributions. These nondeductible contributions are not taxed when they are distributed. They are a return of the individual’s investment in his or her IRA.

Only the part of the distribution that represents nondeductible contributions (their cost basis) is tax-free. If nondeductible contributions have been made, distributions consist partly of nondeductible contributions (basis) and partly of deductible contributions, earnings, and gains (if there are any). Until all of an individual’s basis has been distributed, each distribution is partly nontaxable and partly taxable.

2. Recognizing Losses on Traditional IRA Investments

If an individual has a loss on his or her traditional IRA investment, the individual can recognize (include) the loss on his or her income tax return, but only when all the amounts in all of his or her traditional IRA accounts have been distributed and the total distributions are less than the individual’s unrecovered basis, if any. The individual’s basis is the total amount of the nondeductible contributions in his or her traditional IRAs. The individual can claim the loss as a miscellaneous itemized deduction, subject to the 2%-of-adjusted-gross-income limit that applies to certain miscellaneous itemized deductions on Schedule A, Form 1040. Any such losses are added back to taxable income for purposes of calculating the alternative minimum tax.

**Example**

Bill King has made nondeductible contributions to a traditional IRA totaling $2,000, giving him a basis at the end of 2015 of $2,000. By the end of 2016, his IRA earns $400 in interest income. In that year, Bill receives a distribution of $600 ($500 basis + $100 interest), reducing the value of his IRA to $1,800 ($2,000 + 400 - 600) at year’s end. Bill figures the taxable part of the distribution and his remaining basis on Form 8606.

In 2017, Bill’s IRA has a loss of $500. At the end of that year, Bill’s IRA balance is $1,300 ($1,800 – 500). Bill’s remaining basis in his IRA is $1,500 ($2,000 - 500). Bill receives the $1,300 balance remaining in the IRA. He can claim a loss for 2017 of $200 (the $1,500 basis minus the $1,300 distribution of the IRA balance).

3. Withholding

Federal income tax is withheld from distributions from traditional IRAs unless the owner chooses not to have tax withheld.

The amount of tax withheld from an annuity or a similar periodic payment is based on the individual’s marital status and the number of withholding allowances the individual claims on his or her withholding
If an individual has not filed a certificate, tax will be withheld as if the individual were a married individual claiming three withholding allowances. Generally, tax will be withheld at a 10% rate on nonperiodic distributions.

**IV. ACTS THAT RESULT IN PENALTIES OR ADDITIONAL TAXES**

The tax advantages of using traditional IRAs for retirement savings can be offset by additional taxes and penalties if an individual does not follow the rules. There are additions to the regular tax for using their IRA funds in prohibited transactions. There are also additional taxes for the following activities:

- Investing in collectibles;
- Making excess contributions;
- Taking early distributions; and
- Allowing excess amounts to accumulate (failing to take required distributions).

There are penalties for overstating the amount of nondeductible contributions and for failure to file Form 8606, if required.

**A. PROHIBITED TRANSACTIONS**

Generally, a prohibited transaction is any improper use of a traditional IRA account or annuity by the owner, his or her beneficiary, or any disqualified person. Disqualified persons include the individual’s fiduciary and members of the individual’s family (spouse, ancestor, lineal descendant, and any spouse of a lineal descendant).

The following are examples of prohibited transactions with a traditional IRA:

- Borrowing money from it;
- Selling property to it;
- Using it as security for a loan; and
- Buying property for personal use (present or future) with IRA funds.

1. **Fiduciary**

A fiduciary includes anyone who does any of the following:

- Exercises any discretionary authority or discretionary control in managing the individual’s IRA or exercises any authority or control in managing or disposing of its assets;
- Provides investment advice to the individual’s IRA for a fee, or has any authority or responsibility to do so; or
- Has any discretionary authority or discretionary responsibility in administering the individual’s IRA.
2. Effect on an IRA Account

Generally, if an owner or his or her beneficiary engages in a prohibited transaction in connection with a traditional IRA account at any time during the year, the account stops being an IRA as of the first day of that year.

3. Effect on Owner or Beneficiary

If an individual’s account stops being an IRA because the individual or his or her beneficiary engaged in a prohibited transaction, the account is treated as distributing all its assets to the owner of the account at their fair market values on the first day of the year. If the total of those values is more than the individual’s basis in the IRA, the individual will have a taxable gain that is includible in his or her income. The distribution may be subject to additional taxes or penalties.

4. Borrowing on an Annuity Contract

If an individual borrows money against his or her traditional IRA annuity contract, the individual must include in his or her gross income the fair market value of the annuity contract as of the first day of his or her tax year. The individual may have to pay the 10% additional tax on early distributions.

5. Pledging an Account as Security

If an individual uses a part of his or her traditional IRA account as security for a loan, that part is treated as a distribution and is included in the individual’s gross income. The individual may have to pay the 10% additional tax on early distribution.

6. Owner Participation

If an individual participates in the prohibited transaction with his or her employer or the association, the individual’s account is no longer treated as an IRA.

7. Taxes on Prohibited Transactions

If someone other than the owner or beneficiary of a traditional IRA engages in a prohibited transaction, that person may be liable for certain taxes. In general, there is a 15% tax on the amount of the prohibited transaction and a 100% additional tax if the transaction is not corrected.

B. EXEMPT TRANSACTIONS

The following two types of transactions are not prohibited transactions if they meet the requirements that follow:

- Payments of cash, property, or other consideration by the sponsor of the individual’s traditional IRA to himself or herself (or members of his or her family).
- The receipt of services at reduced or no cost from the bank where the individual’s traditional IRA is established or maintained.
1. Payments of Cash, Property, or Other Consideration

Even if a sponsor makes payments to an individual or his or her family, there is no prohibited transaction if all three of the following requirements are met:

   a) The payments are for establishing a traditional IRA or for making additional contributions to it;
   
   b) The IRA is established solely to benefit the individual, his or her spouse, and the individual's or his or her spouse's beneficiaries;
   
   c) During the year, the total fair market value of the payments the individual receives is not more than: $10 for IRA deposits of less than $5,000, or $20 for IRA deposits of $5,000 or more.

If the consideration is group term life insurance, requirements (a) and (c) do not apply if no more than $5,000 of the face value of the insurance is based on a dollar-for-dollar basis on the assets in the individual's IRA.

2. Services Received at Reduced or No Cost

Even if a sponsor provides services at reduced or no cost, there is no prohibited transaction if all five of the following requirements are met:

   • The traditional IRA qualifying the individual to receive the services is established and maintained for the benefit of the individual, his or her spouse and his or her beneficiaries;
   
   • The bank itself can legally offer the services;
   
   • The services are provided in the ordinary course of business by the bank (or a bank affiliate) to customers who qualify but do not maintain an IRA (or a Keogh plan);
   
   • The determination, for a traditional IRA, of who qualifies for these services is based on an IRA (or a Keogh plan) deposit balance equal to the lowest qualifying balance for any other type of account; and
   
   • The rate of return on a traditional IRA investment that qualifies is not less than the return on an identical investment that could have been made at the same time at the same branch of the bank by a customer who is not eligible for (or does not receive) these services.

C. INVESTMENT IN COLLECTIBLES

If an individual's traditional IRA invests in collectibles, the amount invested is considered distributed to the individual in the year invested. The individual may have to pay the 10% additional tax on early distributions. Collectibles include artworks, rugs, antiques, metals, gems, stamps, coins, alcoholic beverages and certain other tangible personal property.
An individual’s IRA can invest in one, one-half, one-quarter, or one-tenth ounce U.S. gold coins, or one-ounce silver coins minted by the Treasury Department. It can also invest in certain platinum coins and certain gold, silver, palladium, and platinum bullion.

**D. TAXES ON EXCESS CONTRIBUTIONS**

In general, if the excess contributions for a year are not withdrawn by the date an individual’s return for the year is due (including extensions), the individual is subject to a 6% tax. The individual must pay the 6% tax each year on excess amounts that remain in his or her traditional IRA at the end of his or her tax year. The tax cannot be more than 6% of the value of the IRA as of the end of the individual’s tax year.

**Example**

For 2016, Paul Jones is 45 years old and single, his compensation is $31,000, and he contributed $6,000 to his traditional IRA. Paul has made an excess contribution to his IRA of $500 ($6,000 minus the $5,500 limit). The contribution earned $5 interest in 2016 and $6 interest in 2017 before the due date of the return, including extensions. He does not withdraw the $500 or the interest it earned by the due date of his return, including extensions.

Paul figures his additional tax for 2016 by multiplying the excess contribution ($500) shown on line 16, Form 5329, by .06, giving him an additional tax liability of $30. He enters the tax on line 17, Form 5329, and on line 59, Form 1040.

An individual will not have to pay the 6% tax if he or she withdraws an excess contribution made during a tax year and he or she also withdraws any interest or other income earned on the excess contribution. The individual must complete the withdrawal by the date his or her tax return for that year is due, including extensions.

**E. EARLY DISTRIBUTIONS**

Individuals must include early distributions of taxable amounts from their traditional IRA in their gross income. Early distributions are also subject to an additional 10% tax.

Early distributions generally are amounts distributed from an individual’s traditional IRA account or annuity before age 59½, or amounts received when the individual cashed in retirement bonds before reaching age 59½.

1. **Age 59½ Rule**

Generally, if the individual is under age 59½, he or she must pay a 10% additional tax on the distribution of any assets (money or other property) from his or her traditional IRA. Distributions before reaching age 59½ are called early distributions.
The 10% additional tax applies to the part of the distribution that the individual has to include in gross income. It is in addition to any regular income tax on that amount.

2. Exceptions

There are several exceptions to the age 59½ rule. Even if the individual receives a distribution before reaching age 59½, he or she may not have to pay the 10% additional tax if he or she is in one of the following situations.

- The individual has unreimbursed medical expenses that are more than 10% (or 7.5% if his or her spouse was born before January 2, 1952) of his or her adjusted gross income.
- The distributions are not more than the cost of his or her medical insurance due to a period of unemployment.
- The individual is totally and permanently disabled.
- The individual is the beneficiary of a deceased IRA owner.
- The individual is receiving distributions in the form of an annuity.
- The distributions are not more than his or her qualified higher education expenses.
- The distributions are used to buy, build, or rebuild a first home.
- The distribution is due to an IRS levy of the qualified plan.
- The distribution is a qualified reservist distribution.

3. Additional 10% Tax

The additional tax on early distributions is 10% of the amount of the early distribution that the individual must include in his or her gross income. This tax is in addition to any regular income tax resulting from including the distribution in income.

The tax on early distributions does not apply to the part of a distribution that represents a return of the individual’s nondeductible contributions (basis).
**CHAPTER 12: TEST YOUR KNOWLEDGE**

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

<table>
<thead>

### 4. Which of the following rules apply to the distribution of money from an IRA:

A. money can remain in an IRA indefinitely without penalty

B. there is a 50% excise tax imposed on money that should have been distributed from an IRA but was not

C. owners of a traditional IRA must begin taking distributions by April 1 of the year following the year they reach age 70½

D. both B and C above

### 5. What are contributions to an IRA above the federally-allowed maximum subject to:

A. forfeiture

B. a 6% tax

C. a 12% tax

D. a 15% tax
Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| **1.** | **A.** Incorrect. Although the individual must have taxable compensation, the compensation need not be wages. In addition, there is a maximum age.  
**B.** Incorrect. The individual must have taxable income and not reach age 70½.  
**C.** Incorrect. Persons may be covered by another retirement plan so long as they meet the eligibility requirements.  
**D.** **CORRECT.** Persons must meet both requirements for any year they wish to make a contribution to their IRA.  
*(See page 255 of the course material.)* |
| **2.** | **A.** Incorrect. Account holders actually have 60 days from the time they receive the distribution from the first account.  
**B.** Incorrect. The allowable time period is 60 days.  
**C.** **CORRECT.** Taxpayers are generally given 60 days to take distributions from one retirement account and roll them into another before the first distribution is considered a taxable event.  
**D.** Incorrect. While there are circumstances that would warrant additional time, the general rule gives taxpayers 60 days to roll over the proceeds.  
*(See pages 269 to 270 of the course material.)* |
| **3.** | **A.** Incorrect. The correct percentage is larger than this amount.  
**B.** **CORRECT.** This applies even if the individual plans to roll over the distribution to a traditional IRA. However, withholding can be avoided by selecting a direct rollover.  
**C.** Incorrect. This percentage amount is not applicable to any traditional retirement arrangement.  
**D.** Incorrect. Payer’s are currently required to withhold 20% in these situations.  
*(See page 271 of the course material.)* |
4. **A.** Incorrect. Money in an IRA must be distributed at certain times or is subject to an expensive excise tax. This is true even if the retiree does not need the money and would prefer to leave it to his/her heirs.

**B.** Incorrect. The 50% excise tax is imposed on money that was not properly distributed from an IRA. However, this is not the best answer.

**C.** Incorrect. This is true for traditional IRAs held by the original account holder. However, this is not the most correct answer.

**D. CORRECT.** For a traditional IRA, account owners must begin taking minimum distributions by April 1 of the year following the year they reach age 70½. Failure to do so results in the imposition of an excise tax equal to 50% of the money that was improperly left in the account.

*(See page 277 of the course material.)*

5. **A.** Incorrect. While such excess contributions are subject to tax until they are withdrawn, the funds themselves are not forfeited.

**B. CORRECT.** If these excess funds are not withdrawn prior to the date the taxpayer’s return is due, they are subject to a 6% tax. This tax is due every year the excess amounts remain in the taxpayer’s account at the end of his or her normal tax year.

**C.** Incorrect. The actual tax is only 6%.

**D.** Incorrect. The penalty is a 6% tax.

*(See page 287 of the course material.)*
CHAPTER 13: TAXATION OF SOCIAL SECURITY BENEFITS

Chapter Objective

After completing this chapter, you should be able to:

• Recognize the rules governing the benefits provided through the social security system.

Some people who get social security benefits have to pay income taxes on their benefits. This fact could affect an individual’s planning for when he or she begins receiving his or her benefits and what other type of work, if any, the individual will do once he or she begins receiving those benefits. This chapter provides a basic overview of how benefits are calculated and paid and the rules governing the taxation of benefits.

I. OVERVIEW OF THE SYSTEM

Social security is part of the retirement plans of almost every worker in the United States. It has been around for approximately 75 years. The Social Security system is designed so that there is a link between how much workers and their employers pay into the system over their working years and how much they will get in benefits. Basically, high-wage earners receive a higher benefit payment than low-wage earners. However, the benefit “formula” is set up so that lower wage earners will get a higher percentage of their pre-retirement earnings.

Workers can retire as early as age 62 and get reduced social security benefits. Or they can wait until full retirement age and receive full benefits. In 2016, the full retirement age was 66 years. It will increase gradually until it reaches 67 for people born after 1959.

Generally, out of every dollar a worker pays in social security taxes:

• 85 cents goes to a trust fund that pays monthly benefits to retirees and their families and to widows, widowers and children of workers who have died; and

• 15 cents goes to a trust fund that pays benefits to people with disabilities and their families.

Social security taxes also pay for administering social security.

The entire amount of taxes individuals pay for Medicare (1.45 percent of an employee’s earnings) goes to a trust fund that pays for some of the costs of hospital and related care of Medicare beneficiaries.
A. QUALIFICATIONS FOR RETIREMENT BENEFITS

When an individual is employed and pays social security taxes (called FICA on some pay stubs), he or she earns social security credits. Most people earn the maximum of four credits per year.

1. How Credits Are Earned

Workers qualify for social security benefits by earning credits when they work in a job or are self-employed and pay social security taxes (called self-employment tax for persons who are self-employed).

Credits are based on the amount of a worker’s earnings. Each individual’s work history is used to determine his or her eligibility for retirement or disability benefits as well as his or her family’s eligibility for survivor benefits. In 2016, each worker received one credit for each $1,260 of earnings, up to a maximum of four credits per year. (In 2017, this amount increased to $1,300.)

Each year the amount of earnings required to earn a credit increases slightly as average earnings levels increase. The credits individuals earn remain on their social security record even if they change jobs or have no earnings for a period of time.

2. Special Rules for Some Jobs

Special rules for earning social security coverage apply to certain types of work. If an individual is self-employed, he or she earns social security credits the same way employees do (one credit for each $1,260 in net earnings, but no more than four credits per year). Special rules apply if an individual has net annual earnings of less than $400.

Individuals in the military earn social security credits the same way civilian employees do. However, there might be additional earnings credits under certain conditions.

There are special rules about how workers earn credits for other kinds of work. Some of these jobs are domestic work and farm work and work for a church or church-controlled organization that does not pay social security taxes.

3. Number of Credits Required

The number of credits needed to get retirement benefits depends on each individual’s date of birth. Persons born in 1929 or later, for example, need 40 credits – or 10 years of work – to qualify. People born before 1929 need fewer than 40 credits (39 credits if born in 1928; 38 credits if born in 1927; etc.). Most people earn more credits than are necessary to qualify for benefits. However, extra credits will not increase a person’s benefit level.

B. AMOUNT OF RETIREMENT BENEFIT

An individual’s benefit amount is based on his or her earnings averaged over most of his or her working career. Higher lifetime earnings result in higher benefits. If an individual has some years of no earnings or low earnings, his or her benefit amount may be lower than if he or she had worked steadily.
An individual's benefit amount also is affected by his or her age at the time he or she starts receiving benefits. Individuals who begin receiving retirement benefits at age 62 (the earliest possible retirement age) will have a lower level of benefits than if they had waited to a later date to retire.

Individuals can use the social security’s online Retirement Estimator to get immediate and personalized retirement benefit estimates to help plan for their retirement. The online Retirement Estimator is a convenient and secure financial planning tool that eliminates the need to manually key in years of earnings information. The estimator also will let individuals create “what if” scenarios. For example, an individual can change his or her “stop work” dates or expected future earnings to create and compare different retirement options.

Workers age 18 or older, who are not getting social security benefits can get their personal Social Security Statement online. The Statement is a valuable tool to help plan a secure financial future. It gives a record of an individual’s earnings and estimates of what his or her social security benefits would be at different retirement ages. It also provides an estimate of disability benefits an individual would get if he or she becomes severely disabled before retirement. The Statement also gives estimates of the survivor’s benefits social security would provide to the individual’s spouse and eligible family members when he or she dies.

1. Full Retirement Age

Individuals born in 1950 or earlier already are eligible for their full social security benefit. If a person was born from 1943 to 1960, the age at which full retirement benefits are payable increases gradually to age 67. Table 13-1 lists the full retirement age by year of birth.

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Even though the full retirement age is no longer 65, individuals should sign up for Medicare three months before their 65th birthday.</td>
</tr>
</tbody>
</table>

2. Early Retirement

Individuals can elect to start their social security benefits as early as age 62, but the benefit amount they receive will be less than their full retirement benefit.

If an individual elects to take early retirement, his or her benefits will be permanently reduced based on the number of months he or she will receive checks before reaching full retirement age. If an individual’s full retirement age is 67, the reduction for starting his or her social security at age 62 is about 30 percent; at age 63, it is about 25 percent; at age 64, it is about 20 percent; at age 65, it is about 13.3 percent; and at age 66, it is about 6.7 percent.
TABLE 13-1. AGE TO RECEIVE FULL SOCIAL SECURITY BENEFITS

<tr>
<td>1960 and later</td>
<td>67</td>
</tr>
</tbody>
</table>

Note: People born on January 1 of any year should refer to the previous year.

As a general rule, early retirement will give an individual about the same total social security benefits over his or her lifetime, but in smaller amounts to take into account the longer period over which he or she will receive them.

Some people stop working before they reach age 62. In that case, it is important to remember that during years with no earnings, they will miss the opportunity to increase their benefit amount by replacing lower earnings years with higher earnings years.

3. Disability Retirement

Sometimes poor health forces people to retire early. If an individual is unable to continue working because of poor health, he or she should consider applying for social security disability benefits. The amount of the disability benefit is the same as a full, unreduced retirement benefit. If an individual is receiving social security disability benefits when he or she reaches full retirement age, those benefits will be converted to retirement benefits.

4. Delayed Retirement

Not everyone retires at full retirement age. An individual may decide to continue working full time beyond that time. In that case, the individual who elects to continue working can increase his or her social security benefit in two ways:

- Each additional year an individual works adds another year of earnings to his or her social security record. Higher lifetime earnings may result in higher benefits when he or she eventually does retire.

- In addition, an individual’s benefit will be increased by a certain percentage if he or she chooses to delay receiving retirement benefits. These increases will be added in automatically from the time the person reaches his or her full retirement age until he or she starts taking his or her benefits, or reaches age 70. The percentage varies depending on each individual’s year of birth.
For example, an individual born in 1943 or later will receive an additional 8 percent per year (2/3 of 1 percent per month) in the amount of his or her benefit for each year he or she delays signing up for social security beyond his or her full retirement age.

C. CHOOSING A RETIREMENT DATE

If an individual plans to start his or her retirement benefits after age 62, it is a good idea to contact Social Security in advance to see which month is best to claim benefits. In some cases, the choice of a retirement month could mean additional benefits.

It may be advantageous, for example, to have social security benefits start in January, even if the recipient does not plan to retire until later in the year. Depending on an individual’s earnings and benefit amount, it may be possible for the individual to start collecting benefits even though he or she continues to work. Under current rules, many people can receive the most benefits possible with an application that is effective in January.

If an individual is not working, or the person’s annual earnings are under the earnings limit, or he or she plans to start collecting social security when he or she turns 62, the individual should apply for benefits three months before the date he or she wants his or her benefits to start.

D. SOCIAL SECURITY BENEFITS

There are five major categories of benefits paid for through social security taxes: retirement, disability, family benefits, survivors and Medicare. (SSI benefits, which are not financed by social security taxes, are discussed in another section.)

1. Retirement

Benefits are payable at full retirement age (with reduced benefits available as early as age 62) for anyone with enough social security credits. The full retirement age is 65 for persons born before 1938. The age gradually rises until it reaches 67 for persons born in 1960 or later. People who delay retirement beyond full retirement age get special credit for each month they do not receive a benefit until they reach age 70.

2. Disability

Benefits can be paid to people at any age who have enough social security credits and who have a severe physical or mental impairment that is expected to prevent them from doing “substantial” work for a year or more or who have a condition that is expected to result in death. Generally, earnings of $1,130 (for 2016) or more per month are considered substantial. The disability program includes incentives to smooth the transition back into the workforce, including continuation of benefits and health care coverage while a person attempts to work.

3. Survivor Benefits

Certain family members of a deceased worker may be able to get survivors benefits, even though the deceased worker did not work long enough to qualify for retirement benefits. Dependent children may get survivors benefits if the deceased person had 1½ years of work (6 credits) in the three years before
his or her death. Their benefits could continue until they reach age 18 (or age 19 if they are attending an elementary or secondary school full time).

A widow or widower may be able to get benefits. Widow(er)s can begin receiving benefits at age 60 or age 50 if disabled. If an individual is receiving widows or widowers (including divorced widows or widowers) benefits, the individual can switch to his or her own retirement benefits – assuming the individual is eligible and his or her retirement rate is higher than the widow(er)’s rate – as early as age 62. In many cases, a widow(er) can begin receiving one benefit at a reduced rate and then switch to the other benefit at an unreduced rate at full retirement age. The rules vary depending on the situation.

4. Benefits for Family Members

If an individual is receiving retirement benefits, some members of his or her family also can receive benefits. Those who can include:

- A decedent’s wife or husband age 62 or older;
- A decedent’s wife or husband under age 62, if she or he is taking care of his or her child who is under age 16 or disabled;
- The decedent’s former wife or husband age 62 or older;
- Children up to age 18;
- Children age 18-19, if they are full-time students through grade 12; and
- Children over age 18, if they are disabled.

5. Spouse’s Benefits

A spouse receives one-half of the retired worker’s full benefit unless the spouse begins collecting benefits before reaching full retirement age. In that case, the amount of the spouse’s benefit is permanently reduced by a percentage based on the number of months before she or he reaches full retirement age. For example:

- If full retirement age is 65, a spouse can get 37.5 percent of the worker’s unreduced benefit at age 62;
- If full retirement age is 66, a spouse can get 35 percent of the worker’s unreduced benefit at age 62;
- If full retirement age is 67, a spouse can get 32.5 percent of the worker’s unreduced benefit at age 62.

The benefit increases at later ages up to a maximum of 50 percent at full retirement age. If full retirement age is other than those shown here, at age 62 the benefit will fall between 32.5 percent and 37.5 percent. However, if the spouse is taking care of a child who is under age 16 or disabled and receiving social security benefits, the spouse gets full benefits, regardless of age.
If an individual is eligible for both his or her own retirement benefits and for benefits as a spouse, Social Security will always pay the individual’s own benefit first. If the benefit as a spouse is higher than his or her retirement benefit, the individual will get a combination of benefits equaling the higher spouse benefit.

**Example**

Mary Ann qualifies for a retirement benefit of $250 and a wife’s benefit of $400. At full retirement age, she will receive her own $250 retirement benefit and Social Security will add $150 from her wife’s benefit, for a total of $400. If she takes her retirement benefit at any time before she reaches full retirement age, both amounts will be reduced.

6. **Maximum Family Benefits**

If an individual has children eligible for social security, each will receive up to one-half of that individual’s full benefit. But there is a limit to the amount of money that can be paid to a family. This limit amounts to 150-180 percent of the individual’s benefit payment. If the total benefits due a spouse and children exceed this limit, their benefits will be reduced proportionately. The individual’s benefit will not be affected.

7. **Benefits for a Divorced Spouse**

A divorced spouse can get benefits on a former husband’s or wife’s social security record if the marriage lasted at least 10 years. The divorced spouse must be 62 or older and unmarried. If the spouse has been divorced at least two years, he or she can get benefits, even if the worker is not retired. However, the worker must have enough credits to qualify for benefits and be age 62 or older. The amount of benefits a divorced spouse gets has no effect on the amount of benefits a current spouse can get.

**II. TAXATION OF BENEFITS**

**A. OVERVIEW**

Social security benefits will generally only be taxed if an individual has other substantial income in addition to his or her benefits (for example, wages, self-employment, interest, dividends and other taxable income that he or she has to report on his or her tax return). No one pays taxes on more than 85 percent of his or her social security benefits and some pay on a smaller amount, based on the following IRS rules:

- If someone files a federal tax return as an “individual” and his or her combined income1 is between $25,000 and $34,000, the individual may have to pay income tax on 50 percent of his or her social security benefits. If the individual’s combined income is above $34,000, up to 85 percent of his or her social security benefits is subject to income tax.

---

1. On a 1040 tax return, an individual’s “combined income” is the sum of his or her adjusted gross income, plus nontaxable interest, plus one-half of his or her social security benefits.
• If someone files a joint return, he or she may have to pay taxes on 50 percent of his or her benefits if the person and his or her spouse have a combined income that is between $32,000 and $44,000. If his or her combined income is more than $44,000, up to 85 percent of their social security benefits is subject to income tax.

• If someone is married and files a separate tax return, he or she will probably pay taxes on his or her benefits.

Every January, benefit recipients will receive a Social Security Benefit Statement (Form SSA-1099) showing the amount of benefits they have received in the previous year. Recipients can use this statement when they complete their federal income tax return to find out if any of their benefits are subject to income tax.

In applying these rules, social security benefits include monthly survivor and disability benefits. They do not include supplemental security income (SSI) payments, which are not taxable. Although benefits recipients are not required to have federal taxes withheld from their social security benefits, some people may find it easier than paying quarterly estimated tax payments.

To find out whether any benefits may be taxable, a social security recipient should compare the base amount for their filing status (defined below) with the total of:

• One-half of their benefits, plus
• All other income, including tax-exempt interest.

When making this comparison, individuals do not reduce their other income by any exclusions for:

• Interest from qualified U.S. savings bonds;
• Employer-provided adoption benefits;
• Foreign earned income or foreign housing; or
• Income earned in American Samoa or Puerto Rico by bona fide residents.

An individual’s base amount is:

• $25,000 if single, head of household, or qualifying widow(er);  
• $25,000 if married filing separately and lived apart from a spouse for all of the year;  
• $32,000 if married filing jointly; or  
• $-0- if an individual is married filing separately and lived with his or her spouse at any time during the year.
Example

Mark and Monica have regular income (such as interest income, dividend income, capital gain income, etc.) of $15,000. They also have tax-exempt interest income of $12,000. Together, they receive total social security benefits of $20,000. Since their modified AGI ($27,000) plus half of their social security benefits ($10,000) exceeds the $32,000 threshold, they will have to pay taxes on their social security benefits.

B. AMOUNT SUBJECT TO TAX

If part of an individual's benefits are taxable, how much is taxable depends on the total amount of the individual's benefits and other income. Generally, the higher that total amount, the greater the taxable part of an individual's benefits. Generally, up to 50% of a recipient's benefits will be taxable. However, up to 85% of benefits can be taxable if either of the following situations applies:

- The total of one-half of the recipient's benefits and all his or her other income is more than $34,000 ($44,000 if married filing jointly); or

- The individual is married filing separately and lived with his or her spouse at any time during the year.

C. DISABILITY AND SURVIVOR BENEFITS

These tax rules also apply to social security disability and survivor benefits. Also remember that, in the case of disability and survivor benefits, many of those benefits are paid to dependent children. This means that while a parent may deposit the funds in his or her account and use them for the benefit of his or her children, they will not be treated as the parent’s benefits for tax purposes.

D. WHO IS TAXED?

The person who has the legal right to receive the benefits must determine whether the benefits are taxable. For example, if a widow and her child receive benefits, but the check for the child is made out in the mother’s name, the mother must use only her part of the benefits to see whether any benefits are taxable to her. One-half of the part that belongs to the child must be added to the child’s other income to see whether any of those benefits are taxable to the child.

E. TAX WITHHELD AND ESTIMATED TAX

A social security beneficiary can choose to have federal income tax withheld from his or her benefits. To do this, an individual must complete IRS Form W-4V.

If an individual does not choose to have income tax withheld, he or she may have to request additional withholding from other income or pay estimated tax during the year.
F. PERSONS EXEMPT FROM TAX

1. U.S. Citizens Residing Abroad

U.S. citizens who reside in the following countries are exempt from U.S. tax on their benefits:

- Canada;
- Egypt;
- Germany;
- Ireland;
- Israel;
- Italy (individual must also be a citizen of Italy for the exemption to apply);
- Romania; and
- United Kingdom.

2. Lawful Permanent Residents

For U.S. income tax purposes, lawful permanent residents (green card holders) are considered resident aliens until their lawful permanent resident status under the immigration laws is either taken away or is administratively or judicially determined to have been abandoned. Social security benefits paid to a green card holder are not subject to 30% withholding.

3. Nonresident Aliens

A nonresident alien is an individual who is not a citizen or resident of the United States. If an individual is a nonresident alien, these rules do not apply. Instead, 85% of the recipient’s benefits are taxed at a 30% rate, unless exempt (or subject to a lower rate) by treaty. Such recipients will receive a Form SSA-1042S or Form RRB-1042S showing the amount of their benefits. These forms will also show the tax rate and the amount of tax withheld from the recipient’s benefits.

Under tax treaties with the following countries, residents of these countries are exempt from U.S. tax on their benefits:

- Canada;
- Egypt;
- Germany;
- Ireland;
- Israel;
- Italy;
• Japan;
• Romania; and
• United Kingdom.

Under a treaty with India, benefits paid to individuals who are both residents and nationals of India are exempt from U.S. tax if the benefits are for services performed for the United States, its subdivisions, or local government authorities. If a recipient is a resident of Switzerland, their total benefit amount will be taxed at a 15% rate.

If an individual’s social security benefits are exempt from tax because the individual is a resident of one of the treaty countries listed, the SSA will not withhold U.S. tax from his or her benefits.

4. Canadian or German Social Security Benefits Paid to U.S. Residents

Under income tax treaties with Canada and Germany, social security benefits paid by those countries to U.S. residents are treated for U.S. income tax purposes as if they were paid under the social security legislation of the United States.
## CHAPTER 13: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

<table>
<thead>
<tr>
<th>Question</th>
<th>Description</th>
<th>Options</th>
</tr>
</thead>
</table>
| 1. | What is the maximum number of social security credits per year that can be earned by someone who is self-employed: | A. one credit  
B. two credits  
C. four credits  
D. six credits |
| 2. | What is the minimum amount of time (or number of credits) that a deceased worker needs to have worked in the three years prior to his/her death to allow family members to qualify for survivor’s benefits: | A. 6 months or 2 credits  
B. 12 months or 4 credits  
C. 18 months or 6 credits  
D. 24 months or 8 credits |
| 3. | Under what circumstances are social security retirement benefits subject to federal income tax: | A. never  
B. where the recipient and his/her spouse have assets valued at $1 million or more  
C. when the recipient has other significant income aside from the retirement benefits  
D. whenever the recipient or his/her spouse receives any other retirement benefits |
## CHAPTER 13: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

<table>

PART III: INCOME TAX CONSIDERATIONS IN ESTATE AND EDUCATION PLANNING
I. INTRODUCTION

When individuals sit down to plan their estate, they are often concerned about several competing interests. On the one hand, most individuals want to minimize their tax liability during their lifetime. On the other hand, people want to leave as much property and other assets to their heirs as possible without those heirs being subject to estate or gift tax. Income tax considerations therefore play a very important role in planning an estate.

If an individual gives someone money or property during his or her lifetime, the individual may be subject to federal gift tax. The money and property an individual owns when he or she dies (the individual’s estate) may be subject to federal estate tax. The purpose of this chapter is to provide a general understanding of when these taxes apply and when they do not. It explains how much money or property an individual can give away during his or her lifetime or leave to his or her heirs at death before any tax will be owed.

A. MAJOR CHANGES TO ESTATE AND GIFT TAXES

On January 1, 2013, Congress approved and the President signed into law new legislation titled the American Taxpayer Relief Act of 2012 (“ATRA-2012”).

In addition to extending the Bush-era income tax cuts for 98% of U.S. taxpayers, the new law also makes permanent the sweeping changes originally made to the federal estate and gift tax rules under the 2010 Tax Act and EGTRRA of 2001.

Highlights of the 2012 American Taxpayer Relief Act include:

• The federal estate tax exemption amount was raised to $5.45 million (inflation indexed) for all deaths occurring in 2016.

• The federal estate tax rate was set at 40%, up from 35% in prior years.

• The federal estate and gift tax unification was extended permanently.

• The generation-skipping transfer (“GST”) tax exemption amount is the same as the estate tax exclusion amount ($5,450,000 for 2016).
• Portability. ATRA-2012 extends the ability of a deceased spouse’s estate to transfer any unused portion of the deceased spouse’s exemption amount to the surviving spouse.

B. RELATIONSHIP BETWEEN ESTATE AND GIFT TAXES

Unlike most tax structures, the estate tax and gift tax are unified – integrated – into one tax system. The federal estate and gift tax imposes a tax on transferring assets: one tax catches transfers made during the individual’s life – the gift tax, the other catches transfers at death – the estate tax. Transfers while an individual was alive and at his or her death are combined and subject to one progressive tax. The rates are the same for both taxes.

The reunification of the gift and estate exemptions (permanently made effective by the ATRA) provides planning opportunities for clients who may have used all of their $1,000,000 gift tax exemption who now desire to make additional large lifetime gifts, but who don’t want to pay gift tax.

C. NORMALLY NO TAX OWED

Most gifts are not subject to the gift tax and most estates are not subject to the estate tax. (Less than 1% of all estates are subject to the estate tax). For example, there is usually no tax if an individual makes a gift to his or her spouse or a qualified charity or if his or her estate goes to his or her spouse or qualified charity upon death. If an individual makes a gift to someone else, the gift tax does not apply until the value of the gifts given to that person is more than the annual exclusion for the year. Even if tax applies to a gift or estate, it may be eliminated by the Unified Credit, discussed later.

D. NO RETURN NEEDED

Generally, an individual does not need to file a gift tax return unless he or she gives someone, other than his or her spouse, money or property worth more than the annual exclusion for that year. Although a return may be required, no actual gift tax will become payable until the cumulative lifetime taxable gifts exceed the applicable exclusion amount.

The donor is primarily responsible for the payment of the Gift Tax. An estate tax return generally will not be needed unless the estate is worth more than the applicable exclusion amount for the year of death. This amount is shown in the section under Unified Credit, below.

E. NO TAX ON PERSON RECEIVING GIFT OR ESTATE

The person who receives a gift or estate generally will not have to pay any gift tax or estate tax because of it. In addition, that person will not have to pay income tax on the value of the gift or inheritance received. Note, however, that there are some technical applications for “Income in Respect of Decedent” under Internal Revenue Code §691 that will have to be considered for income earned but not otherwise taxed prior to the date of death.

F. NO INCOME TAX DEDUCTION

Making a gift or leaving an estate to a decedent’s heirs does not ordinarily affect federal income tax.
An individual cannot deduct the value of gifts made (other than gifts that are deductible charitable contributions).

**Example**

Chuck has a valuable stamp collection that has been appraised at $10,000. He would like to give the collection to his grandson, Harold, before his death. If he chooses to make the gift, it will not be subject to gift tax because it is below the taxable threshold. However, Chuck is not entitled to take a deduction from his income tax for the value of the collection. The gift has no impact on Chuck’s current tax liability whatsoever.

**G. UNIFIED CREDIT**

1. Application to Estate and Gift Taxes

A credit is an amount that eliminates or reduces tax. The unified credit applies to both the gift tax and the estate tax. An individual must subtract the unified credit from any gift taxes that he or she owes. Any unified credit that is used against an individual’s gift tax in one year reduces the amount of credit that he or she can use against his or her gift tax in a later year. The total amount used against an individual’s gift tax reduces the credit available to use against his or her estate tax.

2. Amount of Credit

The ATRA-2012 made permanent the reunification of the gift and estate exemption from 2010 of $5,000,000 (inflation indexed). The exemption amount is $5,450,000 in 2016 and $5,490,000 in 2017.

**II. ESTATE TAXES: AN OVERVIEW**

**A. FORM 706**

The executor of a decedent’s estate uses Form 706 to figure the estate tax imposed by Chapter 11 of the Internal Revenue Code. This tax is levied on the entire taxable estate, not just on the share received by a particular beneficiary. Form 706 is also used to compute the generation-skipping transfer (GST) tax imposed by Chapter 13 on direct skips (transfers to skip persons of interests in property included in the decedent’s gross estate).

**B. WHICH ESTATES MUST FILE**

Federal law provides an exemption from estate tax in an amount that varies from year to year. For example, for decedents who die in 2016, there is a $5.45 million exclusion amount. If the value of the estate is less than the applicable exemption in the decedent’s year of death, no return is required. Current rules are shown in Table 14-1, below.
TABLE 14-1. INCREASED ESTATE TAX APPLICABLE EXCLUSION AMOUNT

An estate tax return for a U.S. citizen or resident needs to be filed only if the gross estate exceeds the applicable exclusion amount.

<table>
<thead>

</tbody>
</table>

To determine whether an executor must file a return for the estate, add:

- The adjusted taxable gifts (under § 2001(b)) made by the decedent after December 31, 1976;
- The total specific exemption allowed under § 2521 (as in effect before its repeal by the Tax Reform Act of 1976) for gifts made by the decedent after September 8, 1976; and
- The decedent’s gross estate valued at the date of death.

C. GROSS ESTATE AND TAXABLE ESTATE

The gross estate includes all property in which the decedent had an interest (including real property outside the United States). It also includes:

- Certain transfers made during the decedent’s life without an adequate and full consideration in money or money’s worth;
- Annuities;
- The includible portion of joint estates with right of survivorship;
- The includible portion of tenancies by the entirety;
- Certain life insurance proceeds (even though payable to beneficiaries other than the estate);
- Property over which the decedent possessed a general power of appointment;
- Dower or curtesy (or statutory estate) of the surviving spouse; and
- Community property to the extent of the decedent’s interest as defined by applicable law.
After determining the gross value of a decedent’s estate, the personal representative should take all possible deductions to reduce the taxable estate. These deductions include:

- Funeral expenses paid out of the decedent’s estate;
- Debts the decedent owed at the time of death; and
- The marital deduction (generally, the value of the property that passes from the decedent’s estate to his or her surviving spouse).

D. ADMINISTRATIVE EXPENSES

Expenses of administering an estate can be deducted from the gross estate in figuring the federal estate tax.

1. Typical Expenses

In general, administration expenses deductible in figuring the estate tax include:

- Fees paid to the fiduciary for administering the estate;
- Attorney, accountant, and return preparer fees;
- Expenses incurred for the management, conservation, or maintenance of property; and
- Expenses in connection with the determination, collection, or refund of the estate’s tax liability.

2. No Double Dipping

Administrative expenses cannot be claimed for both estate tax and income tax purposes. The expenses incurred in the sale of property are deductible from the gross estate only if the sale was necessary to pay decedent debts, or to preserve or distribute the property of the estate.

E. MARITAL DEDUCTION

One of the primary deductions for married decedents is the Marital Deduction. All property that is included in the gross estate and passes to the surviving spouse is eligible for the marital deduction. The property must pass “outright.” In some cases, certain life estates also qualify for the marital deduction.

F. CHARITABLE DEDUCTION

If the decedent leaves property to a qualifying charity either during his or her life or at death, it is deductible from the gross estate. Potential donors must be sure the “charity” they are considering qualifies for tax purposes.

Generally, only the five following types of organizations can be qualified organizations:
A community chest, corporation, trust, fund, or foundation organized or created in or under the laws of the United States, any state, the District of Columbia, or any possession of the United States (including Puerto Rico). It must be organized and operated only for one or more of the following purposes:

- Religious;
- Charitable;
- Educational;
- Scientific;
- Literary; or
- The prevention of cruelty to children or animals.

Certain organizations that foster national or international amateur sports competition also qualify:

- War veterans’ organizations, including posts, auxiliaries, trusts, or foundations, organized in the United States or any of its possessions;

- Domestic fraternal societies, orders, and associations operating under the lodge system (note that contribution to this type of organization is deductible only if it is to be used solely for charitable, religious, scientific, literary, or educational purposes, or for the prevention of cruelty to children or animals);

- Certain nonprofit cemetery companies or corporations (note that a contribution to this type of organization is not deductible if it can be used for the care of a specific lot or mausoleum crypt); and

- The United States or any state, the District of Columbia, a U.S. possession (including Puerto Rico), a political subdivision of a state or U.S. possession, or an Indian tribal government or any of its subdivisions that perform substantial government functions (note that to be deductible, a contribution to this type of organization must be made solely for public purposes).

Examples

**Example 1.** Ozzie contributes cash to his city’s police department to be used as a reward for information about a crime. The city police department is a qualified organization, and his contribution is for a public purpose. He can deduct his contribution.

**Example 2.** Sharon makes a voluntary contribution to the social security trust fund, not earmarked for a specific account. Because the trust fund is part of the U.S. Government, she contributed to a qualified organization. She can deduct her contribution.

The following list gives some examples of qualified organizations:
• Churches, a convention or association of churches, temples, synagogues, mosques, and other religious organizations;

• Most nonprofit charitable organizations such as the Red Cross and the United Way;

• Most nonprofit educational organizations, including the Boy (and Girl) Scouts of America, colleges, museums, and day-care centers if substantially all the child care provided is to enable individuals (the parents) to be gainfully employed and the services are available to the general public. However, if your contribution is a substitute for tuition or other enrollment fee, it is not deductible as a charitable contribution;

• Nonprofit hospitals and medical research organizations;

• Utility company emergency energy programs, if the utility company is an agent for a charitable organization that assists individuals with emergency energy needs;

• Nonprofit volunteer fire companies;

• Public parks and recreation facilities; and

• Civil defense organizations.

1. Giving Property That Has Decreased in Value

One of the more technical areas of charitable giving involves gifts of property that have decreased in value. If an individual contributes property with a fair market value that is less than his or her basis in it, the deduction is limited to its fair market value. An individual cannot claim a deduction for the difference between the property’s basis and its fair market value. Common examples of property that decrease in value include clothing, furniture, appliances, and cars.

2. Giving Property That Has Increased in Value

Another common estate planning tool involves the gift of property that has appreciated in value. If an individual contributes property with a fair market value that is more than his or her basis in it, the individual may have to reduce the fair market value by the amount of appreciation (increase in value) when calculating his or her deduction.

Different rules apply to figuring the deduction, depending on whether the property is ordinary income property or capital gain property.

Property is ordinary income property if its sale at fair market value on the date it was contributed would have resulted in ordinary income or in short-term capital gain. Examples of ordinary income property are inventory, works of art created by the donor, manuscripts prepared by the donor, and capital assets held 1 year or less.

Property used in a trade or business is considered ordinary income property to the extent of any gain that would have been treated as ordinary income because of depreciation had the property been sold at its fair market value at the time of contribution.
The amount an individual can deduct for a contribution of ordinary income property is its fair market value less the amount that would be ordinary income or short-term capital gain if the owner sold the property for its fair market value. Generally, this rule limits the deduction to the owner’s basis in the property.

**Example**

Lonnie, who knows he has only six months to live, donates stock that he has held for 5 months to his church. The fair market value of the stock on the day he donates it is $1,000, but he paid only $800 (his basis). Because the $200 of appreciation would be short-term capital gain if Lonnie sold the stock, his deduction is limited to $800 (fair market value less the appreciation).

Property is capital gain property if its sale at fair market value on the date of the contribution would have resulted in long-term capital gain. Capital gain property includes capital assets held more than one year.

Capital assets include most items of property that an individual owns and uses for personal purposes or investment. Examples of capital assets are stocks, bonds, jewelry, coin or stamp collections, and cars or furniture used for personal purposes. For purposes of figuring a charitable contribution, capital assets also include certain real property and depreciable property used in a trade or business and, generally, held more than one year. (Individuals may have to treat this property as partly ordinary income property and partly capital gain property.)

When figuring the deduction for a gift of capital gain property, an individual can usually use the fair market value of the gift. However, in certain situations, he or she must reduce the fair market value by any amount that would have been long-term capital gain if the individual had sold the property for its fair market value. Generally, this means reducing the fair market value to the property’s cost or other basis. This must be done if:

- The property (other than qualified appreciated stock) is contributed to certain private non-operating foundations;
- The contributed property is tangible personal property that is put to an unrelated use by the charity; or
- The individual chooses the 50% limit instead of the 30% limit, discussed later.

The reduced deduction applies to contributions to all private non-operating foundations other than those qualifying for the 50% limit, discussed later.

However, the reduced deduction does not apply to contributions of qualified appreciated stock. Qualified appreciated stock is any stock in a corporation that is capital gain property and for which market quotations are readily available on an established securities market on the day of the contribution. But stock in a corporation does not count as qualified appreciated stock to the extent the individual and his or her family contributed more than 10% of the value of all the outstanding stock in the corporation.
The term tangible personal property means any property, other than land or buildings, that can be seen or touched. It includes furniture, books, jewelry, paintings, and cars. The term unrelated use means a use that is unrelated to the exempt purpose or function of the charitable organization. For a governmental unit, it means the use of the contributed property for other than exclusively public purposes.

**Example**

If a painting contributed to an educational institution is used by that organization for educational purposes by being placed in its library for display and study by art students, the use is not an unrelated use. But if the painting is sold and the proceeds are used by the organization for educational purposes, the use is an unrelated use.

An individual should not reduce his charitable contribution if he includes the ordinary or capital gain income in his gross income in the same year as the contribution. This may happen when an individual transfers installment or discount obligations or when he or she assigns income to a charitable organization.

**Example**

Ray donates an installment note to a qualified organization. The note has a fair market value of $10,000 and a basis to Ray of $7,000. As a result of the donation, Ray has a short-term capital gain of $3,000 ($10,000 - $7,000), which he includes in his income for the year. Ray’s charitable contribution is $10,000.

3. **Bargain Sales**

A bargain sale of property to a qualified organization (a sale or exchange for less than the property’s fair market value) is partly a charitable contribution and partly a sale or exchange. The part of the bargain sale that is a sale or exchange may result in a taxable gain.

The part that is a charitable contribution is calculated in three steps:

- **Step 1.** Subtract the amount the individual received for the property from the property’s fair market value at the time of sale. This gives the fair market value of the contributed part.

- **Step 2.** Find the adjusted basis of the contributed part. It equals: Adjusted basis of entire property x fair market value of contributed part ÷ fair market value of entire property.

- **Step 3.** Determine whether the amount of the charitable contribution is the fair market value of the contributed part (which was found in Step 1) or the adjusted basis of the contributed part (which was found in Step 2). Generally, if the property sold was capital gain property, the charitable contribution is the fair market value of the contributed part. If it was ordinary income property, the charitable contribution is the adjusted basis of the contributed part.
Example

Bernard sells ordinary income property with a fair market value of $10,000 to a church for $2,000. Bernard’s basis is $4,000 and his adjusted gross income is $20,000. Bernard makes no other contributions during the year. The fair market value of the contributed part of the property is $8,000 ($10,000 - $2,000). The adjusted basis of the contributed part is $3,200 ($4,000 × ($8,000 ÷ $10,000)). Because the property is ordinary income property, Bernard’s charitable contribution deduction is limited to the adjusted basis of the contributed part. He can deduct $3,200.

4. Limits on Deductions

If an individual’s total contributions for the year are 20% or less of his or her adjusted gross income, this section does not apply. However, for someone considering making large contributions to reduce the size of his or her taxable estate, the following rules are very important. The amount of an individual’s deduction is limited to 50% of his or her adjusted gross income, and may be limited to 30% or 20% of his or her adjusted gross income, depending on the type of property donated and the type of organization to which it is given.

a. 50% Limit

The 50% limit applies to the total of all charitable contributions made during the year. This means that an individual’s deduction for charitable contributions cannot be more than 50% of his or her adjusted gross income for the year.

The 50% limit is the only limit that applies to gifts to organizations listed below under 50% Limit Organizations. But there is one exception. A 30% limit also applies to these gifts if they are gifts of capital gain property for which an individual figures his or her deduction using fair market value without reduction for appreciation.

b. 50% Limit Organizations

Only the following types of organizations are 50% limit organizations:

- Churches, and conventions or associations of churches;
- Educational organizations with a regular faculty and curriculum that normally have a regularly enrolled student body attending classes on site;
- Hospitals and certain medical research organizations associated with these hospitals;
- Organizations that are operated only to receive, hold, invest, and administer property and to make expenditures to or for the benefit of state and municipal colleges and universities and that normally receive substantial support from the United States or any state or their political subdivisions, or from the general public;
• The United States or any state, the District of Columbia, a U.S. possession (including Puerto Rico), a political subdivision of a state or U.S. possession, or an Indian tribal government or any of its subdivisions that perform substantial government functions;

• Corporations, trusts, or community chests, funds, or foundations organized and operated only for charitable, religious, educational, scientific, or literary purposes, or to prevent cruelty to children or animals, or to foster certain national or international amateur sports competition. These organizations must be “publicly supported,” which means they normally must receive a substantial part of their support, other than income from their exempt activities, from direct or indirect contributions from the general public or from governmental units;

• Organizations that may not qualify as “publicly supported” but that meet other tests showing they respond to the needs of the general public, not a limited number of donors or other persons. They must normally receive more than one-third of their support either from organizations described in above or from persons other than “disqualified persons”;

• Most organizations operated or controlled by and operated for the benefit of those organizations described above;

• Private operating foundations;

• Private non-operating foundations that make qualifying distributions of 100% of contributions within 2½ months following the year they receive the contribution. A deduction for charitable contributions to any of these private non-operating foundations must be supported by evidence from the foundation confirming that it made the qualifying distributions timely. A copy of this supporting data should be attached to the tax return; and

• A private foundation whose contributions are pooled into a common fund, if the foundation would be described above but for the right of substantial contributors to name the public charities that receive contributions from the fund. The foundation must distribute the common fund’s income within 2½ months following the tax year in which it was realized and must distribute the corpus not later than 1 year after the donor’s death (or after the death of the donor’s surviving spouse if the spouse can name the recipients of the corpus).

c. 30% Limit

A 30% limit applies to the following gifts:

• Gifts to all qualified organizations other than 50% limit organizations. This includes gifts to veterans’ organizations, fraternal societies, nonprofit cemeteries, and certain private non-operating foundations; and

• Gifts for the use of any organization.
However, if these gifts are of capital gain property, they are subject to the 20% limit, described later, rather than the 30% limit.

d. Special 30% Limit for Capital Gain Property

A special 30% limit applies to gifts of capital gain property to 50% limit organizations. However, the special 30% limit does not apply when an individual chooses to reduce the fair market value of the property by the amount that would have been long-term capital gain if he or she had sold the property. Instead, only the 50% limit applies.

This special 30% limit for capital gain property is separate from the other 30% limit. Therefore, the deduction of a contribution subject to one 30% limit does not reduce the amount an individual can deduct for contributions subject to the other 30% limit. However, the total an individual can deduct cannot be more than 50% of his or her adjusted gross income.

### Example

Paul’s adjusted gross income is $50,000. During the year, he gave capital gain property with a fair market value of $15,000 to a 50% limit organization. Paul does not choose to reduce the property’s fair market value by its appreciation in value. He also gave $10,000 cash to a qualified organization that is not a 50% limit organization. The $15,000 gift of property is subject to the special 30% limit. The $10,000 cash gift is subject to the other 30% limit. Both gifts are fully deductible because neither is more than the 30% limit that applies ($15,000 in each case) and together they are not more than the 50% limit ($25,000).

e. 20% Limit

The 20% limit applies to all gifts of capital gain property to or for the use of qualified organizations (other than gifts of capital gain property to 50% limit organizations).

f. Calculating a Deduction When Limits Apply

If an individual’s contributions are subject to more than one of the limits just discussed, he or she can deduct them as follows:

1. Contributions subject only to the 50% limit, up to 50% of an individual’s adjusted gross income.

2. Contributions subject to the 30% limit, up to the lesser of:
   
   a) 30% of adjusted gross income, or
   
   b) 50% of adjusted gross income minus an individual’s contributions to 50% limit organizations, including contributions of capital gain property subject to the special 30% limit.
3. Contributions of capital gain property subject to the special 30% limit, up to the lesser of:
   a) 30% of adjusted gross income, or
   b) 50% of adjusted gross income minus an individual’s other contributions to 50% limit organizations.

4. Contributions subject to the 20% limit, up to the lesser of:
   a) 20% of adjusted gross income,
   b) 30% of adjusted gross income minus an individual’s contributions subject to the 30% limit,
   c) 30% of adjusted gross income minus an individual’s contributions of capital gain property subject to the special 30% limit, or
   d) 50% of adjusted gross income minus the total of an individual’s contributions to 50% limit organizations and his or her contributions subject to the 30% limit.

Example

Martha’s adjusted gross income is $50,000. During the year, she gave her church $2,000 cash and land with a fair market value of $28,000 and a basis of $22,000. Martha held the land for investment purposes. She does not choose to reduce the fair market value of the land by the appreciation in value. Martha also gave $5,000 cash to a private foundation to which the 30% limit applies.

The $2,000 cash donated to the church is considered first and is fully deductible. Her contribution to the private foundation is considered next. Because her contributions to 50% limit organizations ($2,000 + $28,000) are more than $25,000 (50% of $50,000), her contribution to the private foundation is not deductible for the year. It can be carried over to later years. The gift of land is considered next. Martha’s deduction for the land is limited to $15,000 (30% × $50,000). The unused part of the gift of land ($13,000) can be carried over. For this year, Martha’s deduction is limited to $17,000 ($2,000 + $15,000).

g. Capital Gain Property Election

An individual may choose the 50% limit for gifts of capital gain property to 50% limit organizations instead of the 30% limit that would otherwise apply. If an individual makes this choice, he or she must reduce the fair market value of the property contributed by the appreciation in value that would have been long-term capital gain if the property had been sold. This choice applies to all capital gain property contributed to 50% limit organizations during a tax year. It also applies to carryovers of this kind of contribution from an earlier tax year.
An individual must make the choice on his or her original return or on an amended return filed by the due date for filing the original return.

**Example**

In the previous example, if Martha chose to have the 50% limit apply to the land (the 30% capital gain property) given to her church, she must reduce the fair market value of the property by the appreciation in value. Therefore, the amount of her charitable contribution for the land would be its basis to her of $22,000. Martha adds this amount to the $2,000 cash contributed to the church. She can now deduct $1,000 of the amount donated to the private foundation because her contributions to 50% limit organizations ($2,000 + $22,000) are $1,000 less than the 50%-of-adjusted-gross-income limit. Her total deduction for the year is $25,000 ($2,000 cash to her church, $22,000 for property donated to her church, and $1,000 cash to the private foundation). Martha can carry over to later years the part of her contribution to the private foundation that she could not deduct ($4,000).

**h. Carryovers**

An individual can carry over his or her contributions that he or she is not able to deduct in the current year because they exceed his or her adjusted-gross-income limits. The individual can deduct the excess in each of the next 5 years until it is used up, but not beyond that time. The individual's total contributions deduction for the year to which he or she carries his or her contributions cannot exceed 50% of his or her adjusted gross income for that year.

Contributions an individual carries over are subject to the same percentage limits in the year to which they are carried. For example, contributions subject to the 20% limit in the year in which they are made are 20% limit contributions in the year to which they are carried.

For each category of contributions, an individual can deduct carryover contributions only after deducting all allowable contributions in that category for the current year. If an individual has carryovers from two or more prior years, he or she must use the carryover from the earlier year first.

Also note that a carryover of a contribution to a 50% limit organization must be used before contributions in the current year to organizations other than 50% limit organizations.

**G. VALUING AN ESTATE**

As a general rule, every asset included in a decedent’s gross estate is valued at its fair market value. The personal representative can choose from the following valuation dates:

- The decedent’s date of death; or
- The value six months later (known as the alternate valuation date).
The alternative valuation date election is allowed only if it lowers the individual’s tax liability. Whatever
date is selected, it is irrevocable and will apply to all assets in the estate.

If the 6-months-after-death date applies, all of the decedent’s assets must be valued on that date.
Furthermore, if property is sold, distributed, exchanged, or disposed of during the 6-month period, it is
valued on the date of the distribution, sale, etc., rather than the alternative valuation date.

Family farmland and closely-held family business interests can be valued at less than their highest-
and-best use. It is important that the decedent’s personal representative accurately value the estate.
Otherwise, underpayment penalties described below apply.

H. U.S. CITIZENS OR RESIDENTS; NONRESIDENT NONCITIZENS

An executor must file Form 706 for the estates of decedents who were either U.S. citizens or U.S.
residents at the time of death. For estate tax purposes, a resident is someone who had a domicile in the
United States at the time of death. A person acquires a domicile by living in a place for even a brief period
of time, as long as the person had no intention of moving from that place.

An executor must file Form 706-NA, United States Estate (and Generation-Skipping Transfer) Tax Return,
Estate of nonresident not a citizen of the United States, for the estates of nonresident alien decedents
(decedents who were neither U.S. citizens nor residents at the time of death).

I. PAYING ESTATE TAXES

The estate and Generation Skipping Taxes (GST) taxes are due within 9 months after the date of the
decedent’s death unless an extension of time for payment has been granted, or unless an executor has
properly elected under § 6166 to pay in installments, or under § 6163 to postpone the part of the tax
attributable to a reversionary or remainder interest.

J. PENALTIES

1. Late Filing and Late Payment

Internal Revenue Code § 6651 provides for penalties for both late filing and for late payment unless
there is reasonable cause for the delay. The law also provides for penalties for willful attempts to evade
payment of tax. The late filing penalty will not be imposed if the taxpayer can show that the failure to file
a timely return is due to reasonable cause.

2. Valuation Understatement

Internal Revenue Code § 6662 provides a 20% penalty for the underpayment of estate tax that exceeds
$5,000 when the underpayment is attributable to valuation understatements. A valuation understatement
occurs when the value of property reported on Form 706 is 65% or less of the actual value of the property.

This penalty increases to 40% if there is a gross valuation understatement. A gross valuation understatement
occurs if any property on the return is valued at 40% or less of the value determined to be correct.

These penalties also apply to late filing, late payment, and underpayment of GST taxes.
III. GIFT TAX

The gift tax applies to the transfer by gift of any property. An individual makes a gift if he or she gives property (including money), or the use of or income from property, without expecting to receive something of at least equal value in return. If an individual sells something at less than its full value or if he or she makes an interest-free or reduced interest loan, the individual may be making a gift.

Examples

Example 1. Lisa’s granddaughter, Katie, is going away to college and needs a car to come home on the weekends. Lisa buys Katie a Volkswagen Bug. This is clearly a gift.

Example 2. Rob’s cousin, Mark, is trying to open a new business detailing cars. Rob has always felt that Mark did not get as much financial support from their grandparents as he did so he wants to help his cousin out. He tells Mark that he will “loan” him $50,000 to open his business, but that the money does not need to be paid back until the business becomes successful. Although Rob is calling this payment a “loan,” it appears more like a gift since there is no apparent expectation of repayment.

Even if tax applies to a gift or estate, it may be eliminated by the Unified Credit, discussed below.

A. GENERAL RULE

The general rule is that any gift is a taxable gift. However, there are many exceptions to this rule. Generally, the following gifts are not taxable gifts:

- Gifts that are not more than the annual exclusion for the calendar year;
- Tuition or medical expenses a taxpayer pays for someone (the educational and medical exclusions);
- Gifts to an individual’s spouse;
- Gifts to a political organization for its use; and
- Gifts to qualified charities (a deduction is available for these amounts).

B. ANNUAL EXCLUSION

A separate annual exclusion applies to each person to whom an individual makes a gift. For 2016 and 2017, the annual exclusion is $14,000. Therefore, during 2017 an individual generally could give up to $14,000 each to any number of people and none of the gifts would have been taxable.
1. **Married Couples**

If an individual is married, both he or she and his or her spouse can separately give up to $14,000 to the same person in the same year without making a taxable gift. If one of the two gives more than $14,000 to a person, the gift splitting rules discussed below apply. Gifts to individuals are not deductible on the donor’s income tax returns.

2. **Inflation Adjustment**

The $14,000 annual exclusion will continue to be indexed in $1,000 increments due to annual CPI cost-of-living adjustments. See the instructions for Form 709 for the amount of the annual exclusion for the year the gift is made.

### Examples

**Example 1.** In 2016, Wanda gives her niece a cash gift of $8,000. It is her only gift to her this year. The gift is not a taxable gift because it is not more than the $14,000 annual exclusion.

**Example 2.** Martin pays the $15,000 college tuition of his friend. Because the payment qualifies for the educational exclusion, the gift is not a taxable gift.

**Example 3.** In 2016, Ken gives $25,000 to his 25-year-old daughter. The first $14,000 of his gift is not subject to the gift tax because of the annual exclusion. The remaining $11,000 is a taxable gift. As explained later under Applying the Unified Credit to Gift Tax, Ken may not have to pay the gift tax on the remaining $11,000. However, he does have to file a gift tax return.

3. **Gift Splitting**

If an individual and his spouse make a gift to a third party, the gift can be considered as made one-half by the individual and one-half by his spouse. This is known as gift splitting. Both spouses must consent (agree) to split the gift. If such consent is given, each spouse can take the annual exclusion for their part of the gift. In 2016, for example, gift splitting allowed married couples to give up to $28,000 to a person without making a taxable gift.

If a couple does decide to split a gift, they must file a gift tax return showing that there was an agreement to split the gift.
John and his wife, Marsha, agree to split the gifts that they made during 2016. John gives his son, George, $21,000, and Marsha gives her daughter, Gina, $18,000. Although each gift is more than the annual exclusion ($14,000), by gift splitting they can make these gifts without making a taxable gift.

John’s gift to George is treated as one-half ($10,500) from John and one-half ($10,500) from Marsha. Marsha’s gift to Gina is also treated as one-half ($9,000) from Marsha and one-half ($9,000) from John. In each case, because one-half of the split gift is not more than the annual exclusion, it is not a taxable gift. However, each of them must file a gift tax return.

4. No Limit on Number of Gift Recipients

An individual is free to give away as many gifts as he or she wants. In theory, a rich man could dispose of his entire estate by giving thousands of people a gift that falls under the annual exclusion level.

Example

Walt, who knows that he is dying, decides to dispose of his entire $1,000,000 cash estate by making gifts to his many family members and friends. Assuming the applicable annual exclusion in the year he wishes to make the gifts is $14,000, Walt can make a gift of $14,000 to 71 different people and $6,000 to one person and avoid any gift tax liability. In so doing, he will be disposing of his entire $1,000,000 in a single year.

C. APPLICATION OF THE UNIFIED CREDIT

A credit is an amount that eliminates or reduces tax. The unified credit applies to both the gift tax and the estate tax. An individual must subtract the unified credit from any gift tax that he or she owes. Any unified credit used against the gift tax in one year reduces the amount of credit that can be used against gift tax in a later year. The total amount used against gift tax reduces the credit available to use against estate tax.
### Example

In 2016, Lori gave her niece, Mary, a cash gift of $8,000. It was her only gift to her this year. Lori pays the $15,000 college tuition of her friend, David. Lori gave her 25-year-old daughter, Lisa, $25,000. She also gave her 27-year-old son, Ken, $25,000. Before 2016, Lori had never given a taxable gift. She applies the exclusions to the gift tax and the unified credit as follows:

1. Apply the educational exclusion. Payment of tuition expenses is not subject to the gift tax. Therefore, the gift to David is not a taxable gift.

2. Apply the annual exclusion. The first $14,000 given to someone during 2016 is not a taxable gift. Therefore, her $8,000 gift to Mary, the first $14,000 of her gift to Lisa, and the first $14,000 of her gift to Ken are not taxable gifts.

3. Apply the unified credit. The gift tax on $22,000 ($11,000 remaining from her gift to Lisa plus $11,000 remaining from her gift to Ken) is $4,240. Lori subtracts the $4,240 from her unified credit of $2,125,800 for 2016. The unified credit that she can use against the gift tax in a later year is $2,121,560.

Lori does not have to pay any gift tax for 2016. However, she does have to file Form 709.

### D. GIFTS EXEMPT FROM TAX

Regardless of the identity of the recipient or the purpose of the gift (i.e., to help pay for a car or to take a Caribbean cruise), any gift which falls under the annual exclusion limit is exempt from tax. There are other categories that provide a larger exemption.

1. **Educational and Medical Expenses**

   In addition to the $14,000 (2016 and 2017) annual gift tax exclusion, there is a 100% exclusion when an individual makes direct payments for someone’s medical bills or tuition expenses. Both the medical and educational exclusions are allowed without regard to the relationship – so the recipient need not be a close relative or dependent. The payments must be made directly to the medical care provider or the educational institution. Payments to the recipient cancel the tax benefit. Room and board, supplies, books and other fees do not qualify.

   A qualifying educational organization is one that normally maintains a regular faculty and curriculum and normally has a regularly enrolled body of pupils or students.

   Medical care includes expenses for diagnosis, cure, mitigation, treatment, or prevention of disease, or for the purpose of affecting any structure or function of the body, or for transportation. It also includes medical insurance.
2. Gifts to a Spouse

Transfers between spouses are 100% deductible for gift tax purposes. This is known as the “unlimited Gift Tax marital deduction”. However, the value of the gift, whether it was for a future or present interest, must be included in the giver’s gross estate on death in order for the deduction to apply. If the gross estate does not include the transfers to the spouse, no marital deduction applies.

This gift exclusion only applies to gifts to a U.S. citizen spouse. An individual can give away $148,000 in 2016 ($149,000 in 2017) tax-free to a spouse who is not a U.S. citizen.

3. Charitable Contributions

Individuals can give any amount – no matter how large – to a qualified charity completely tax-free. For example, if Martin owns real estate that he gifts outright to a charity, no gift tax is due. The value of what Martin transferred is included in the gross estate after his death, but it is 100% subtracted before the tax rates are applied. This issue is discussed in more detail above in the section on estate taxes.

TABLE 14-2. DETERMINING WHETHER GIFT IS SUBJECT TO GIFT TAX

The following table is intended to help the reader determine whether a gift is subject to gift tax or not.

<table>
<thead>
<tr>
<th>Type of Gift</th>
<th>Whether It Is Subject to Gift Tax</th>
</tr>
</thead>
<tbody>
<tr>
<td>Father gives 10 gifts of $2,000 each to his son during calendar year.</td>
<td>Yes. Total of gifts during year exceed annual exclusion level.</td>
</tr>
<tr>
<td>Mother gifts her remainder interest in her mother’s life estate to her daughter.</td>
<td>Yes. Future interests are always subject to gift tax, regardless of value.</td>
</tr>
<tr>
<td>Husband gives his wife a $25,000 diamond ring to celebrate their silver wedding anniversary.</td>
<td>No. Gift to spouse is exempt regardless of value.</td>
</tr>
<tr>
<td>Uncle pays the $15,000 annual tuition for his nephew to attend a private university.</td>
<td>No. Educational expenses are normally exempt.</td>
</tr>
<tr>
<td>Grandmother pays $20,000 for surgery for grandson who does not have medical insurance.</td>
<td>No. Medical expenses are normally exempt.</td>
</tr>
<tr>
<td>Husband and wife jointly donate $1,000,000 to cancer research at the UCLA medical center.</td>
<td>No. Gift is made to a charitable organization.</td>
</tr>
</tbody>
</table>

E. VALUING GIFTS

An important component in determining the applicability of a gift tax is the value of the gift. If someone makes a gift of $15,000 in cash, valuation is obviously not an issue. Valuation questions arise with other types of property, such as real property, stocks and collectibles.
Example

Michael makes a gift to his nephew of 1,000 shares of stock in XYZ Corporation. Michael purchased the shares two years ago at $5 per share. On the day he makes the gift, the stock is trading at $15 per share. Is the value of the gift $5,000 (the amount Michael paid for the stock) or $15,000 (the current value of the stock at the time the gift is executed)? The IRS considers the value of the gift to be its fair market value at the time the gift is made. This means that the value of this gift is $15,000, above the applicable annual exclusion of $14,000. The gift will still, however, come under Michael’s lifetime umbrella exclusion and he will therefore not currently have to pay tax on the gift. Upon Michael’s death, the total amount of his lifetime gifts will be calculated and subtracted from his unified credit applicable in the year of his death.

F. FILING A GIFT TAX RETURN

As with the income tax return, Gift Tax returns (Form 709) are due on April 15 of the year following the year in which the taxpayer made the gift. The Gift Tax (if any) is due at the time of filing the return.

1. Return Required

An individual must file a gift tax return on Form 709 if any of the following apply:

- The individual gave gifts that are more than the annual exclusion for the year to someone (other than his or her spouse);
- The individual and his or her spouse are splitting a gift (discussed above);
- The individual gave someone (other than his or her spouse) a gift that he or she cannot actually possess, enjoy, or receive income from until some time in the future; or
- The individual gave his or her spouse an interest in property that will be ended by some future event.

2. Return Not Required

An individual is not required to file a gift tax return to report gifts to (or for the use of) political organizations and gifts made by paying someone’s tuition or medical expenses. An individual also does not need to report the following deductible gifts made to charities:

- The individual's entire interest in property, if no other interest has been transferred for less than adequate consideration or for other than a charitable use; or
- A qualified conservation contribution that is a restriction (granted forever) on the use of real property.
IV. GENERATION-SKIPPING TAX

A. APPLICATION AND RATIONALE

The generation skipping tax sounds complicated but in reality it is a simple concept intended to prevent families from avoiding estate taxes.

**Example**

Roger is an 85-year-old widower with one son and five grandchildren. Roger’s son, Jason, is 62-years-old and is suffering from advanced prostate cancer. He is also financially secure. If Roger leaves his property to his son, it will likely soon pass to his grandchildren. If this happens, it may be subject to estate taxes when it is passes to Jason and then again when Jason dies and leaves the estate to his own children. In order to avoid the potential of double taxation, Roger elects to “skip” his son’s generation and leave his estate directly to his grandchildren. While the idea may seem sound, the generation skipping tax could kick in and eliminate his planned tax savings.

The generation skipping tax (hereinafter referred to as “GST”) can apply outside of familial situations as well. It may be due if a beneficiary of a gift or estate is 37.5 years younger than the donor or deceased.

1. **Assignment to Generations**

A GST tax is due when a transfer of assets is made to a “skip person.” A skip person is determined by looking at the generation assignments applicable for family and non-family members.

a. **Family Members**

Generally, the GST tax will be imposed when the assets are transferred to a family member two or more generations below the decedent or person making the gift. The family member must be a lineal descendant of the transferor’s, or his or her spouse’s, grandparents. For example, a grand-nephew, grandson or spouse’s grand-nephew would all be classified as two generations below the transferor.

The law does not distinguish between persons who are whole-blood, half-blood or adopted relatives. Regardless of the age difference between spouses, they are always considered to be of the same generation.

b. **Predeceased Generation in a Direct Skip**

This rule allows someone from a lower generation to be pushed into a higher generation if he or she was predeceased by someone from that higher generation.
Example

Lucy leaves her property in trust to her son for his life, and upon her son’s death, to her grandson. If her son dies before Lucy, the property that passes to her grandson will not be considered to have skipped a generation.

A living descendant who dies no later than 90 days after the subject transfer is treated as having predeceased the transferor to the extent that either the governing instrument or applicable local law provides that such individual shall be treated as predeceasing the transferor.

In most cases, a living descendant is not treated as a predeceased child solely by reason of applicable local law; e.g., an individual is not treated as a predeceased child solely because state law treats an individual executing a disclaimer as having predeceased the transferor of the disclaimed property.

Examples

Example 1. Thomas establishes an irrevocable trust providing that trust income is to be paid to Thomas’ grandchild, Sam, for 5 years. At the end of the 5-year period, the trust is to terminate and the principal is to be distributed to Sam. Thomas’s child, Charles, a parent of Sam, is deceased at the time Thomas establishes the trust. Therefore, Sam is treated as a child of Thomas rather than as a grandchild. As a result, Sam is not a skip person, and the initial transfer to the trust is not a direct skip. Similarly, distributions to Sam during the term of the trust and at the termination of the trust will not be GSTs.

Example 2. The facts are the same as in Example 1, except the trust income is to be paid to Thomas’s spouse, Sylvia, during the first two years of the trust. Since Sylvia has an interest in the trust, the trust is not a skip person and the transfer by Thomas is not a direct skip. Since the transfer is not a direct skip, the predeceased ancestor rule does not apply and Sam is not treated as the child of Thomas. A taxable termination occurs at the expiration of Sylvia’s interest.

c. Non-Family Situations

Non-family members are assigned to the same generation if the individual making the gift and the recipient are within 12½ years of each other in age. A beneficiary with an age difference from the person making the gift of between 12½ and 37½ years is assigned to the second generation. Any transfer of property between individuals with an age difference of more than 37½ years is subject to GST tax. Individuals with an age difference of more than 37½ years are assigned to generations in 25-year increments.
B. EXEMPTIONS

1. Life Time Exemption

Individuals may avoid the impact of the GST through their applicable lifetime exemption. The exemption is $5,450,000 for 2016. Application of the exemption can have a profound tax savings affect on an estate.

Example

Lorraine plans to gift $1.12 million to a trust to provide income to her son and grandchildren. She allocates all of her GST exemption to the transfer. Because all of Lorraine’s property placed in the trust is permanently exempt from GST tax, neither the principal in the trust nor proceeds paid to her son or grandchildren will be subject to tax. If, on the other hand, Lorraine had not used her GST exemption and her son were to die, the $1.12 million that would pass to her grandchildren would be subject to the GST. Assuming a tax rate of 40%, that would reduce the value of the estate to $672,000.

2. Gifts

Gifts given outright that qualify for the applicable Gift Tax exclusion are shielded from the GST tax as are education and medical expenses.

3. Allocation of Exemption

The exemption may be allocated to the transferred property at any time before an estate tax return becomes due. Once the allocation election is made, the decision is irrevocable.

4. Unused Exemption

Unused GST credit is automatically allocated to direct skip transfers made during the life of a decedent unless the person elects otherwise on a gift tax return. In addition, the exemption will be deemed allocated to any trust that involves an “indirect skip” during the decedent’s lifetime.

Any portion of the exemption that remains unallocated upon the death of the decedent is first allocated to any direct skips that occur at his or her death (e.g., a bequest to a grandchild), and then to trusts from which a taxable distribution or taxable termination may occur by virtue of the individual’s death. A generation-skipping trust may undergo a “qualified severance” under which it would be split into exempt and non-exempt trusts.

C. TAX RATE

The GST exemption amount is set at $5,450,000 (and a maximum 40% tax rate) for 2016, and the exemption amount is indexed for inflation thereafter.
TABLE 14-3. GENERATION SKIPPING TAX RATE

<table>
<thead>
<tr>
<th>Year</th>
<th>Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>2010</td>
<td>0%</td>
</tr>
<tr>
<td>2011-2012</td>
<td>35%</td>
</tr>
<tr>
<td>2013-2017</td>
<td>40%</td>
</tr>
</tbody>
</table>

1. Tax Rate Is Flat

Unlike the graduated tax rates used for the estate and gift taxes, the GST tax is a flat rate tax.

2. State Tax Credit

The federal GST tax permits a credit for any GST taxes paid to a state. The credit may only be claimed if:

- The transfer is not a direct skip; and
- The GST occurs at the same time and as a result of the death of an individual.

The amount allowed as a credit must not surpass 5% of the amount of the federal GST tax imposed.

3. Deductions

In some cases, deductions are available to reduce the liability of the GST tax. The type of transfer determines whether a deduction applies. The transferor of a taxable termination may claim a deduction for administration expenses, indebtedness and taxes. Taxable distributions may be reduced by the expenses of determination, collection, or refund of a tax. Direct skips, on the other hand, are not eligible for any deductions.

D. PAYMENT OF TAX

The party responsible for payment of the GST tax depends upon the type of generation skipping transfer. The following table identifies which individual must pay the GST tax.

TABLE 14-4. PAYMENT OF GENERATION-SKIPPING TAX

<table>

</tr>
<tr>
<td>Direct Skip (Trust)</td>
<td>Trustee</td>
</tr>
<tr>
<td>Direct Skip (Outright Transfer)</td>
<td>Transferor</td>
</tr>
</tbody>
</table>

1. Taxable Termination

A “taxable termination” occurs upon the termination of an interest in property held in trust (by death, lapse of time, release of power, or otherwise) if:
• Immediately after the termination a skip person has an interest in such property; or

• At any time after the termination, a distribution may be made from the trust to a skip person.

A common example of a taxable termination occurs when a decedent places assets in a trust, with income payable for life to a child, and the remainder to a grandchild. Normally, the child’s life estate interest would not be taxable at death. However, the GST treats the termination of the child’s interest at death as a “taxable termination,” i.e., a taxable transfer to the grandchild, triggering the tax.

### Examples

**Example 1.** Allan establishes an irrevocable trust under which the income is to be paid to his child, Chris, for life. On the death of Chris, the trust principal is to be paid to Allan’s grandchild, Alex. Since Chris has an interest in the trust, the trust is not a skip person and the transfer to the trust is not a direct skip. If Chris dies survived by Alex, a taxable termination occurs at Chris’s death because Chris’s interest in the trust terminates and thereafter the trust property is held by a skip person who occupies a lower generation than Chris.

**Example 2.** Allan establishes an irrevocable trust for the benefit of his child, Chris, grandchild, Alex, and Allan’s great-grandchild, Lisa. Under the terms of the trust, income and principal may be distributed to any or all of the living beneficiaries at the discretion of the trustee. Upon the death of the second beneficiary to die, the trust principal is to be paid to the survivor. Chris dies first. A taxable termination occurs at that time because, immediately after Chris’s interest terminates, all interests in the trust are held by skip persons (Alex and Lisa).

2. **Taxable Distribution**

A “taxable distribution” is a distribution from a trust to a “skip person” that is not classified as a taxable termination or a direct skip.

3. **Direct Skip**

A direct skip is a transfer to a skip person that is subject to Federal estate or gift tax. If property is transferred to a trust, the transfer is a direct skip only if the trust is a skip person. Only one direct skip occurs when a single transfer of property skips two or more generations.
Examples

**Example 1.** Ted gratuitously conveys Blackacre to Ted’s grandchild. Because the transfer is a transfer to a skip person of property subject to Federal gift tax, it is a direct skip.

**Example 2.** Ted gratuitously conveys Blackacre to Ted’s great-grandchild. The transfer is a direct skip. Only one GST tax is imposed on the direct skip although two generations are skipped by the transfer.

With the exception of an outright direct skip, the GST tax return must be filed before the fifteenth day of the fourth month in the year following the taxable year of the transfer. In the case of an outright direct skip transfer, a return must be filed on or before the date for filing the gift or estate tax return.

**E. GENERATION-SKIPPING TRUST**

A common estate-planning tool to avoid the GST is the establishment of a so-called generation-skipping trust. This type of trust can be established either during the lifetime of the trustor or upon his or her death. If it is established while the trustor is still alive, all or part of the GST exemption will be allocated to the trust on the trustor’s gift tax return. If the trust is not established until the trustor dies, the executor of the estate will allocate the exemption on the final tax return of the decedent.

Whether the trust is established during the trustor’s lifetime or at death, the assets of the trust will also be subject to gift or estate taxes. Therefore, the tax consequences of when the trust is established must be compared. If the trust is established with a lifetime gift, the total transfer tax cost to the trustor is the gift tax and the GST tax. If the transfer takes place at death, the total transfer tax is the estimated estate tax on the decedent’s estate (assuming the decedent made no lifetime gifts) plus the GST tax.

Many people also choose to use life insurance to fund a generation-skipping trust. The GST exclusion is applied to the premium rather than the benefit paid upon death. This leaves more of the GST exemption to apply to other assets.

**V. STATE DEATH TAXES**

**A. STATES DEATH TAXES: INHERITANCE, ESTATE AND GIFT TAXES**

For some people, state taxes are also an issue in estate planning. States levy one of two types of death taxes: inheritance and estate (states also levy gift taxes). Inheritance taxes are imposed on the person receiving the devise, while estate taxes are levied on the estate of the deceased person before assets are distributed to heirs.
State estate, inheritance, and gift taxes have undergone significant changes since Congress repealed the federal credit for state death taxes in 2001. That credit effectively paid a large portion of these taxes for states. For deaths in 2014, 31 states do not impose these taxes. Table 14.5 shows the states that impose these taxes.

1. **Inheritance Tax**

Inheritance taxes are normally imposed at graduated rates based upon the amount of the devise and upon the relationship between the deceased and the beneficiary. Several types of exemptions are typically allowed under the inheritance tax:

- Personal exemptions based on the relationship of the giver and receiver (the most common one is for a surviving spouse);
- Exemptions of a specified amount allowed the entire estate;
- Exemptions for property on which a tax already has been paid;
- Exemptions for bequests to charitable, religious or educational institutions; and
- Exemptions for particular types of property.

The personal exemption is usually the most important for state estate tax purposes. There is normally a greater exemption for gifts given to close relatives than to more distant relatives or non-relatives.
Table 14.6 lists the states with inheritance taxes, the exemption amounts, and top rates for lineal heirs and collateral heirs for deaths in 2016. (The Nebraska tax is actually a local tax that is administered by counties with the revenue retained by the county.) Lineal heirs are typically children, grandchildren, and parents, but practices vary as to whether their spouses (e.g., sons-in-law or daughters-in-law) are included. Collateral heirs typically are cousins, aunts, uncles, nephews, nieces, and unrelated individuals. Some states have intermediate classes of beneficiaries—e.g., typically brothers and sisters (who in other states may be class A or C beneficiaries).

*States with estate taxes in addition to the inheritance tax

2. **Estate Taxes**

Estate taxes are also imposed at graduated rates based upon the value of the estate. Unlike the inheritance tax, the rates generally are imposed on the estate as a whole and do not vary based upon the relationship of the beneficiary to the donor.

The tax base for estate taxes (aside from the exemption amounts) generally parallels the federal estate tax or at least relies on definitions under the federal tax. The exemption amounts vary by state, with several states increasing exemptions over time to adjust to the federal exemption amount.

Tax rate schedules vary; half are based on the old federal credit and half have specific state rate schedules. Top tax rates range from 12 percent (Connecticut and Maine) to 20 percent (Washington). Table 14.7 provides details on exemption amounts and top tax rates for the state estate taxes for decedents dying during 2016.

*Exemption amount is scheduled to increase under enacted legislation.
**New Jersey estate tax is repealed effective for 2018 deaths.

3. Gift Tax

The rates imposed and the exemptions allowed under state gift tax laws are similar to rates and exemptions under the inheritance tax. In the case of a gift tax, however, it is the donor rather than the beneficiary who is liable for payment of the tax.

Over the last decade, the few states that imposed stand-alone gift taxes have been largely abandoning them. Stand-alone or true gift taxes apply regardless of when the gift is made.

Connecticut is the only state that imposes a true gift tax. The Connecticut tax is unified with its estate tax with a top rate of 12 percent and an exemption of $2 million. Since the tax is unified with the estate tax, lifetime gifts use up both the gift tax and estate tax exemptions. The tax only applies to gifts that exceed the annual, per-recipient federal exemption amount ($14,000 for 2016 and 2017 gifts, indexed for inflation).
# CHAPTER 14: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

## CHAPTER 14: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

<table>
<thead>
<tr>
<th>Question</th>
<th>Solution</th>
</tr>
</thead>
</table>
| 1. | **A. Incorrect.** One million dollars was the exclusion in 2003.  
B. Incorrect. $3.5 million was the exclusion in 2009.  
C. Incorrect. $5.0 million was the exclusion for 2011.  
D. **CORRECT.** $5.45 million is the exclusion for 2016 as indexed for inflation. (See page 314 of the course material.)** |
| 2. | **A. Incorrect.** Although this is good policy, federal law limits the amount of deduction that can be taken in a year based upon the adjusted gross income of the donor.  
B. Incorrect. Charitable donations are deductible either during the lifetime of the donor or through a trust or will at the time of death that reduces the taxable estate of the donor. Both are subject to limits.  
C. **CORRECT.** The percentage allowable is based on the type of property and the charity to which the property is donated.  
D. Incorrect. The percentage ranges from 20 to 50 percent. (See page 320 of the course material.)** |
| 3. | **A. Incorrect.** There is no cap on the exclusion from gift tax of payments made directly to qualified educational expenses. However, this is not the best answer.  
B. Incorrect. This is exempt from gift tax regardless of the relationship of the donor and the beneficiary. However, this is not the best answer.  
C. Incorrect. There is an unlimited exclusion for gifts between spouses. However, this is not the best answer.  
D. **CORRECT.** All of these are examples of gifts not subject to the federal gift tax. (See pages 329 to 330 of the course material.)** |
4.  
   A. Incorrect. Zero percent was the rate in 2010.
   B. Incorrect. Thirty-five was the rate for the period from 2011 through 2012.
   C. **CORRECT**. Forty percent is the rate based on the legislation signed into law on January 1, 2013.
   D. Incorrect. Forty-five percent was the rate for the period from 2007 through 2009.
   *(See page 335 of the course material.)*
I. INTRODUCTION

Survivors can qualify for certain benefits when filing their own income tax returns, including the following:

- A surviving spouse can file a joint return for the year of death and may qualify for special tax rates for the following two years;
- If the decedent qualified as a taxpayer’s dependent for the part of the year before death, a survivor can claim the exemption for the dependent on his or her tax return, regardless of when death occurred during the year; or
- If the decedent was the survivor’s qualifying child, the survivor may be able to claim the child tax credit or the earned income credit.

A. QUALIFYING WIDOWS AND WIDOWERS

If a survivor’s spouse dies within the two tax years preceding the year for which his or her return is being filed, the survivor may be eligible to claim the filing status of qualifying widow(er) with dependent child and qualify to use the Married filing jointly tax rates.

1. Requirements

Generally, a widow or widower can qualify for this special benefit if he or she meets all of the following requirements:

- The widow or widower was entitled to file a joint return with his or her spouse for the year of death – whether or not he or she actually filed jointly;
- The widow or widower did not remarry before the end of the current tax year;
- The widow or widower has a child, stepchild, or foster child who qualifies as his or her dependent for the tax year; and
- The widow or widower provides more than half the cost of maintaining his or her home, which is the principal residence of that child for the entire year except for temporary absences.
Example

William Burns’ wife died in 2015. Mr. Burns has not remarried and continued throughout 2016 and 2017 to maintain a home for himself and his dependent child. For 2015 he was entitled to file a joint return for himself and his deceased wife. For 2016 and 2017, he qualifies to file as a qualifying widow(er) with dependent child. For later years, he may qualify to file as a head of household.

The last year an individual can file jointly with, or claim an exemption for his or her deceased spouse is the year of death. If an individual is the surviving spouse and a personal representative is handling the estate for the decedent, he or she should coordinate filing his or her return for the year of death with this personal representative.

B. INCOME IN RESPECT OF THE DECEDED

All income that the decedent would have received had death not occurred, that was not properly includible on the final return, is income in respect of the decedent. This exclusion does not apply to certain income.

Income in respect of a decedent must be included in the income of one of the following:

- The decedent’s estate, if the estate receives it;
- The beneficiary, if the right to income is passed directly to the beneficiary and the beneficiary receives it; or
- Any person to whom the estate properly distributes the right to receive it.

If a taxpayer is required to include income in respect of the decedent in his or her income, then he or she would be able to claim a deduction for the estate tax paid on that income.

Examples

Example 1. Frank Johnson owned and operated an apple orchard. He used the cash method of accounting. He sold and delivered 1,000 bushels of apples to a canning factory for $2,000, but did not receive payment before his death. The proceeds from the sale are income in respect of the decedent. When the estate was settled, payment had not been made and the estate transferred the right to the payment to his widow. When Frank’s widow collects the $2,000, she must include that amount in her return. It is not reported on the final return of the decedent or on the return of the estate.
Examples (continued)

**Example 2.** Assume the same facts as in Example 1, except that Frank used the accrual method of accounting. The amount accrued from the sale of the apples would be included on his final return. Neither the estate nor the widow would realize income in respect of the decedent when the money is later paid.

**Example 3.** On February 1, George High, a cash method taxpayer, sold his tractor for $3,000, payable March 1 of the same year. His adjusted basis in the tractor was $2,000. Mr. High died on February 15, before receiving payment. The gain to be reported as income in respect of the decedent is the $1,000 difference between the decedent’s basis in the property and the sale proceeds. In other words, the income in respect of the decedent is the gain the decedent would have realized had he lived.

**Example 4.** Cathy O’Neil was entitled to a large salary payment at the date of her death. The amount was to be paid in five annual installments. The estate, after collecting two installments, distributed the right to the remaining installments to Nora, the beneficiary. The payments are income in respect of the decedent. None of the payments were includible on Cathy’s final return. The estate must include in its income the two installments it received, and Nora must include in her income each of the three installments as she receives them.

**Example 5.** Clair inherited the right to receive renewal commissions on life insurance sold by her father before his death. She inherited the right from her mother, who acquired it by bequest from her father. Clair’s mother died before she received all the commissions she had the right to receive, so Clair received the rest. The commissions are income in respect of the decedent. None of these commissions were includible in her father’s final return. The commissions received by Clair’s mother were included in her income. The commissions Clair received are not includible in her mother’s income, even on her final return. Clair must include them in her income.

1. **Character of Income**

The character of the income received in respect of a decedent is the same as it would be to the decedent if he or she were alive. If the income would have been a capital gain to the decedent, it will be a capital gain to the beneficiary.

2. **Transfer of Right to Income**

If a beneficiary transfers his or her right to income in respect of a decedent, he or she must include in his or her income the greater of:

- The amount he or she received for the right, or
- The fair market value of the right he or she transferred.
If a beneficiary makes a gift of such a right, he or she must include in his or her income the fair market value of the right at the time of the gift. If the right to income from an installment obligation is transferred, the amount he or she must include in income is reduced by the basis of the obligation.

A transfer for this purpose includes a sale, exchange, or other disposition, the satisfaction of an installment obligation at other than face value, or the cancellation of an installment obligation.

3. Installment Obligations

If the decedent had sold property using the installment method and a beneficiary collects payments on an installment obligation he or she acquired from the decedent, the beneficiary will use the same gross profit percentage the decedent used to figure the part of each payment that represents profit. The beneficiary should include in his or her income the same profit the decedent would have included had death not occurred.

4. Transfer to Obligor

A transfer of a right to income, discussed earlier, has occurred if the decedent (seller) had sold property using the installment method and the installment obligation is transferred to the obligor (buyer or person legally obligated to pay the installments). A transfer also occurs if the obligation is canceled either at death or by the estate or person receiving the obligation from the decedent. An obligation that becomes unenforceable is treated as having been canceled.

If such a transfer occurs, the amount included in the income of the transferor (the estate or beneficiary) is the greater of the amount received or the fair market value of the installment obligation at the time of transfer, reduced by the basis of the obligation. The basis of the obligation is the decedent’s basis, adjusted for all installment payments received after the decedent’s death and before the transfer.

If the decedent and obligor were related persons, the fair market value of the obligation cannot be less than its face value.

C. SPECIFIC TYPES OF INCOME IN RESPECT OF A DECEDEDENT

This section explains and provides examples of some specific types of income in respect of a decedent.

1. Wages

The entire amount of wages or other employee compensation earned by the decedent but unpaid at the time of death is income in respect of the decedent. The income is not reduced by any amounts withheld by the employer. If the income is $600 or more, the employer should report it in box 3 of Form 1099-MISC and give the recipient a copy of the form or a similar statement.

Wages paid as income in respect of a decedent are not subject to federal income tax withholding. However, if paid during the calendar year of death, they are subject to withholding for social security and Medicare taxes. These taxes should be included on the decedent’s Form W-2 with the taxes withheld before death. These wages are not included in box 1 of Form W-2.
Wages paid as income in respect of a decedent after the year of death generally are not subject to withholding for any federal taxes.

2. Farm Income

A farmer’s growing crops and livestock at the date of death normally would not give rise to income in respect of a decedent or income to be included in the final return. However, when a cash method farmer receives rent in the form of crop shares or livestock and owns the crop shares or livestock at the time of death, the rent is income in respect of a decedent and is reported in the year in which the crop shares or livestock are sold or otherwise disposed of. The same treatment applies to crop shares or livestock the decedent had a right to receive as rent at the time of death for economic activities that occurred before death.

If the individual died during a rental period, only the proceeds from the portion of the rental period ending with death are income in respect of a decedent. The proceeds from the portion of the rental period from the day after death to the end of the rental period are income to the estate. Cash rent or crop shares and livestock received as rent and reduced to cash by the decedent are includible in the final return even though the rental period did not end until after death.

### Example

Alonzo Roberts, who used the cash method of accounting, leased part of his farm for a 1-year period beginning March 1. The rental was one-third of the crop, payable in cash when the crop share is sold at the direction of Roberts. Roberts died on June 30 and was alive during 122 days of the rental period. Seven months later, Roberts’ personal representative ordered the crop to be sold and was paid $1,500. Of the $1,500, 122/365, or $501, is income in respect of a decedent. The balance of the $1,500 received by the estate, $999, is income to the estate.

3. Partnership Income

If the partner who died had been receiving payments representing a distributive share or guaranteed payment in liquidation of the partner’s interest in a partnership, the remaining payments made to the estate or other successor in interest are income in respect of the decedent. The estate or the successor receiving the payments must include them in income when received. Similarly, the estate or other successor in interest receives income in respect of a decedent if amounts are paid by a third person in exchange for the successor’s right to the future payments.

4. U.S. Savings Bonds Acquired from Decedent

If series EE or series I U.S. savings bonds that were owned by a cash method individual who had chosen to report the interest each year (or by an accrual method individual) are transferred because of death, the increase in value of the bonds (interest earned) in the year of death up to the date of death must be reported on the decedent’s final return. The transferee (estate or beneficiary) reports on its return only the interest earned after the date of death.
The redemption values of U.S. savings bonds generally are available from local banks, savings and loan institutions, the Federal Reserve Bank, or online at http://www.treasurydirect.gov/BC/SBCPrice.

If the bonds transferred because of death were owned by a cash method individual who had not chosen to report the interest each year and had purchased the bonds entirely with personal funds, interest earned before death must be reported in one of the following ways:

1. The person (executor, administrator, etc.) who must file the final income tax return of the decedent can elect to include in it all of the interest earned on the bonds before the decedent’s death. The transferee (estate or beneficiary) then includes in its return only the interest earned after the date of death.

2. If the election in (1), above, was not made, the interest earned to the date of death is income in respect of the decedent and is not included in the decedent’s final return. In this case, all of the interest earned before and after the decedent’s death is income to the transferee (estate or beneficiary). A transferee who uses the cash method of accounting and who has not chosen to report the interest annually may defer reporting any of it until the bonds are cashed or the date of maturity, whichever is earlier. In the year the interest is reported, the transferee may claim a deduction for any federal estate tax paid that arose because of the part of interest (if any) included in the decedent’s estate.

### Examples

**Example 1.** Will’s uncle, a cash method taxpayer, died and left him a $1,000 series EE bond. He had bought the bond for $500 and had not chosen to report the increase in value each year. At the date of death, interest of $94 had accrued on the bond, and its value of $594 at date of death was included in Will’s uncle’s estate. Will’s uncle’s personal representative did not choose to include the $94 accrued interest in the decedent’s final income tax return. Will is a cash method taxpayer and does not choose to report the increase in value each year as it is earned. Assuming he cashes it when it reaches maturity value of $1,000, Will would report $500 interest income (the difference between maturity value of $1,000 and the original cost of $500) in that year. Will is also entitled to claim, in that year, a deduction for any federal estate tax resulting from the inclusion in his uncle’s estate of the $94 increase in value.

**Example 2.** If, in Example 1, the personal representative had chosen to include the $94 interest earned on the bond before death in the final income tax return of Will’s uncle, he would report $406 ($500 - $94) as interest when he cashed the bond at maturity. This $406 represents the interest earned after his uncle’s death and was not included in his estate, so no deduction for federal estate tax is allowable for this amount.
Examples (continued)

**Example 3.** Will’s uncle died owning series HH bonds that he acquired in exchange for series EE bonds. Will was the beneficiary on these bonds. His uncle used the cash method of accounting and had not chosen to report the increase in redemption price of the series EE bonds each year as it accrued. His uncle’s personal representative made no election to include any interest earned before death in the decedent’s final return. Will income in respect of the decedent is the sum of the unreported increase in value of the series EE bonds, which constituted part of the amount paid for series HH bonds, and the interest, if any, payable on the series HH bonds but not received as of the date of the decedent’s death.

5. **Interest Accrued on U.S. Treasury Bonds**

The interest accrued on U.S. Treasury bonds owned by a cash method taxpayer and redeemable for the payment of federal estate taxes that was not received as of the date of the individual’s death is income in respect of the decedent. This interest is not included in the decedent’s final income tax return. The estate will treat such interest as taxable income in the tax year received if it chooses to redeem the U.S. Treasury bonds to pay federal estate taxes.

If the person entitled to the bonds (by bequest, devise, or inheritance, or because of the death of the individual) receives them, that person will treat the accrued interest as taxable income in the year the interest is received. Interest that accrues on the U.S. Treasury bonds after the owner’s death does not represent income in respect of the decedent. The interest, however, is taxable income and must be included in the income of the respective recipients.

6. **Interest Accrued on Savings Certificates**

The interest accrued on savings certificates (redeemable after death without forfeiture of interest) that is for the period from the date of the last interest payment and ending with the date of the decedent’s death, but not received as of that date, is income in respect of a decedent. Interest for a period after the decedent's death that becomes payable on the certificates after death is not income in respect of a decedent, but is taxable income includible in the income of the respective recipients.

7. **Inherited IRAs**

If a beneficiary receives a lump-sum distribution from a traditional IRA he or she inherited, all or some of it may be taxable. The distribution is taxable in the year received as income in respect of a decedent up to the decedent’s taxable balance. This is the decedent's balance at the time of death, including unrealized appreciation and income accrued to date of death, minus any basis (nondeductible contributions). Amounts distributed that are more than the decedent's entire IRA balance (includes taxable and nontaxable amounts) at the time of death are the income of the beneficiary.
If the beneficiary of a traditional IRA is the decedent's surviving spouse who properly rolls over the distribution into another traditional IRA, the distribution is not currently taxed. A surviving spouse also can roll over tax free the taxable part of the distribution into a qualified plan, section 403 annuity, or section 457 plan.

**Examples**

**Example 1.** At the time of his death, Greg owned a traditional IRA. All of the contributions by Greg to the IRA had been deductible contributions. Greg’s nephew, Mark, was the sole beneficiary of the IRA. The entire balance of the IRA, including income accruing before and after Greg’s death, was distributed to Mark in a lump sum. Mark must include the total amount received in his income. The portion of the lump-sum distribution that equals the amount of the balance in the IRA at Greg’s death, including the income earned before death, is income in respect of the decedent. Mark may take a deduction for any federal estate taxes that were paid on that portion.

**Example 2.** Assume the same facts as in Example 1, except that some of Greg’s contributions to the IRA had been nondeductible contributions. To determine the amount to include in income, Mark must subtract the total nondeductible contributions made by Greg from the total amount received (including the income that was earned in the IRA both before and after Greg’s death). Income in respect of the decedent is the total amount included in income less the income earned after Greg’s death.

8. **Roth IRAs**

Qualified distributions from a Roth IRA are not subject to tax. A distribution made to a beneficiary or to the Roth IRA owner’s estate on or after the date of death is a qualified distribution if it is made after the 5-tax-year period beginning with the first tax year in which a contribution was made to any Roth IRA of the owner.

Generally, the entire interest in the Roth IRA must be distributed by the end of the fifth calendar year after the year of the owner’s death unless the interest is payable to a designated beneficiary over his or her life or life expectancy. If paid as an annuity, the distributions must begin before the end of the calendar year following the year of death. If the sole beneficiary is the decedent’s spouse, the spouse can delay the distributions until the decedent would have reached age 70½ or can treat the Roth IRA as his or her own Roth IRA.

Part of any distribution to a beneficiary that is not a qualified distribution may be includible in the beneficiary’s income. Generally, the part includible is the earnings in the Roth IRA. Earnings attributable to the period ending with the decedent’s date of death are income in respect of the decedent. Additional earnings are the income of the beneficiary.
9. **Coverdell Education Savings Account (ESA)**

Generally, the balance in a Coverdell ESA must be distributed within 30 days after the individual for whom the account was established reaches age 30 or dies, whichever is earlier. The treatment of the Coverdell ESA at the death of an individual under age 30 depends on who acquires the interest in the account.

The age 30 limitation does not apply if the individual for whom the account was established or the beneficiary that acquires the account is an individual with special needs. This includes an individual who, because of a physical, mental, or emotional condition (including learning disability), requires additional time to complete his or her education. If the decedent’s spouse or other family member is the designated beneficiary of the decedent’s account, the Coverdell ESA becomes that person’s Coverdell ESA.

Any other beneficiary (including a spouse or family member who is not the designated beneficiary) must include in income the earnings portion of the distribution. Any balance remaining at the close of the 30-day period is deemed to be distributed at that time. The amount included in income is reduced by any qualified education expenses of the decedent that are paid by the beneficiary within 1 year after the decedent’s date of death. An estate tax deduction, discussed later, applies to the amount included in income by a beneficiary other than the decedent’s spouse or family member.

10. **Archer MSA**

The treatment of an Archer MSA or a Medicare Advantage MSA, at the death of the account holder depends on who acquires the interest in the account. If the decedent’s spouse is the designated beneficiary of the account, the account becomes that spouse’s Archer MSA.

Any other beneficiary (including a spouse that is not the designated beneficiary) must include in income the fair market value of the assets in the account on the decedent’s date of death. This amount must be reported for the beneficiary’s tax year that includes the decedent’s date of death. The amount included in income is reduced by any qualified medical expenses for the decedent that are paid by the beneficiary within one year after the decedent’s date of death. An estate tax deduction, discussed later, applies to the amount included in income by a beneficiary other than the decedent’s spouse.

**D. DEDUCTIONS IN RESPECT OF THE DECEDEDENT**

Items such as business expenses, income-producing expenses, interest, and taxes, for which the decedent was liable but that are not properly allowable as deductions on the decedent’s final income tax return will be allowed as a deduction to one of the following when paid:

- The estate; or
- The person who acquired an interest in the decedent’s property (subject to such obligations) because of the decedent’s death, if the estate was not liable for the obligation.

Similar treatment is given to the foreign tax credit. A beneficiary who must pay a foreign tax on income in respect of a decedent will be entitled to claim the foreign tax credit.
1. **Depletion**

The deduction for percentage depletion is allowable only to the person (estate or beneficiary) who receives income in respect of the decedent to which the deduction relates, whether or not that person receives the property from which the income is derived. An heir who (because of the decedent’s death) receives income as a result of the sale of units of mineral by the decedent (who used the cash method) will be entitled to the depletion allowance for that income. If the decedent had not figured the deduction on the basis of percentage depletion, any depletion deduction to which the decedent was entitled at the time of death would be allowable on the decedent’s final return, and no depletion deduction in respect of the decedent would be allowed to anyone else.

2. **Estate Tax Deduction**

Income that a decedent had a right to receive is included in the decedent’s gross estate and is subject to estate tax. This income in respect of a decedent is also taxed when received by the recipient (estate or beneficiary). However, an income tax deduction is allowed to the recipient for the estate tax paid on the income.

The deduction for estate tax can be claimed only for the same tax year in which the income in respect of the decedent must be included in the recipient’s income. (This also is true for income in respect of a prior decedent.)

Individuals can claim this deduction only as an itemized deduction, on line 28 of Schedule A (Form 1040). This deduction is not subject to the 2% limit on miscellaneous itemized deductions. Estates can claim the deduction on the line provided for the deduction on Form 1041. For the alternative minimum tax computation, the deduction is not included in the itemized deductions that are an adjustment to taxable income.

If the income in respect of the decedent is capital gain income, the gain must be reduced, but not below zero, by any deduction for estate tax paid on such gain. This applies in figuring the following:

- The maximum tax on net capital gain.
- The 50% exclusion for gain on small business stock.
- The limitation on capital losses.

3. **Computation**

To figure a recipient’s estate tax deduction, determine –

- The estate tax that qualifies for the deduction, and
- The recipient’s part of the deductible tax.

4. **Deductible Estate Tax**

The estate tax is the tax on the taxable estate, reduced by any credits allowed. The estate tax qualifying for the deduction is the part of the net value of all the items in the estate that represents income in
Net value is the excess of the items of income in respect of the decedent over the items of expenses in respect of the decedent. The deductible estate tax is the difference between the actual estate tax and the estate tax determined without including net value.

Example

Jack used the cash method of accounting. At the time of his death, he was entitled to receive $12,000 from clients for his services and he had accrued bond interest of $8,000, for a total income in respect of the decedent of $20,000. He also owed $5,000 for business expenses for which his estate is liable. The income and expenses are reported on Jack’s estate tax return.

The tax on Jack’s estate is $9,460 after credits. The net value of the items included as income in respect of the decedent is $15,000 ($20,000 - $5,000). The estate tax determined without including the $15,000 in the taxable estate is $4,840, after credits. The estate tax that qualifies for the deduction is $4,620 ($9,460 - $4,840).

Figure the recipient’s part of the deductible estate tax by dividing the estate tax value of the items of income in respect of the decedent included in the recipient’s income (the numerator) by the total value of all items included in the estate that represents income in respect of the decedent (the denominator). If the amount included in the recipient’s income is less than the estate tax value of the item, use the lesser amount in the numerator.

The estate tax deduction allowed an estate is figured in the same manner as just discussed. However, any income in respect of a decedent received by the estate during the tax year is reduced by any such income that is properly paid, credited, or required to be distributed by the estate to a beneficiary. The beneficiary would include such distributed income in respect of a decedent for figuring the beneficiary’s deduction.

For the estate tax deduction, an annuity received by a surviving annuitant under a joint and survivor annuity contract is considered income in respect of a decedent. The deceased annuitant must have died after the annuity starting date. A special computation must be made to figure the estate tax deduction for the surviving annuitant.

### CHAPTER 15: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

<table>
<thead>
<tr>
<th></th>
<th><strong>What is the character of the income received in respect of a decedent:</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>A. capital gain income</td>
</tr>
<tr>
<td></td>
<td>B. ordinary income</td>
</tr>
<tr>
<td></td>
<td>C. tax free income</td>
</tr>
<tr>
<td></td>
<td>D. the same as it would be to the decedent if he or she was alive</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th><strong>Which of the following is true regarding the estate tax deduction that is allowed a recipient for income received in respect of a decedent:</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>A. it can be claimed either in the year of the decedent's death or the tax year the income is included in the recipient's income</td>
</tr>
<tr>
<td></td>
<td>B. it can be claimed whether or not the recipient itemizes deductions</td>

</table>
### CHAPTER 15: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| **1.** | **A.** Incorrect. The character of the income could be capital income, but it is not necessarily so.  
B. Incorrect. The character of the income could be ordinary income, but it is not necessarily so.  
C. Incorrect. The income could be nontaxable, but it is not necessarily so.  
D. **CORRECT**. The character of the income remains the same as it would have been if the decedent had not died. Therefore, the income may be capital gain income, ordinary income, or tax free.  

*(See page 347 of the course material.)* |
| **2.** | **A.** Incorrect. The deduction for the estate tax must be claimed in the same tax year in which the income in respect of the decedent must be included in the recipient’s income.  
B. Incorrect. Individuals can claim this deduction only as an itemized deduction, on line 28 of Schedule A (Form 1040).  
C. **CORRECT**. This deduction is not included in the itemized deductions that are an adjustment to taxable income for the alternative minimum tax calculation.  
D. Incorrect. The recipient can be either the estate or a beneficiary, and the deduction is allowed by either.  

*(See page 354 of the course material.)* |

Chapter Objective

After completing this chapter, you should be able to:

• Recognize characteristics of different types of life insurance policies and variable annuities.

I. LIFE INSURANCE

Life insurance can be a good estate planning tool for a number of reasons, most notably:

• The insured usually pays little up front for the policy;

• The proceeds of the policy pass directly to the beneficiaries without going through probate; and

• The benefits are not generally subject to federal income tax.

However, today’s complex financial markets give individuals a host of other options when considering life insurance, including policies that can add to retirement income. This section will outline the major types of life insurance available and provide some pointers for determining what type of insurance is best in a certain situation, particularly considering its tax implications.

A. THE NATURE OF LIFE INSURANCE

A life insurance policy is a contract. In the contract, the insurer promises to pay proceeds of the policy to the beneficiaries in the event the insured dies. The owner of the policy has the right to name the beneficiary and change the beneficiary as often as he or she likes unless the designation is made irrevocable.

The primary beneficiary is entitled to the proceeds only if he or she survives the insured. Contingent beneficiaries must likewise survive the insured. Thus, in cases of a class that has both surviving and deceased members, only those surviving will receive payment. Settlement options include both installment payments or payment at a future date. The owner of the policy can select the settlement option.

B. WHO NEEDS LIFE INSURANCE?

Almost anyone with dependents should have some type of life insurance policy (the exception may be someone who is so wealthy that it is totally unnecessary to provide the additional assets to survivors upon death). But for most, the only questions are the amount of insurance they should have and the type.
In analyzing the amount of life insurance a person should have, the following list of questions is a good place to start:

- Is the person married?
- Does the person still have children living at home, or, if not living at home, are they still dependent (i.e., college tuition)?
- Does the person own a small business that would likely suffer if he or she were to suddenly die?
- Is there anyone else the person supports, such as an elderly parent?
- What type of financial obligations does the person have, i.e., a large mortgage on his or her home or a loan to support his or her business?

The answers to these and other questions can help determine the amount of insurance that is right for a particular individual. Clearly, for example, someone who has a spouse and several small children living at home with a large mortgage is going to need more life insurance than a single person whose children are grown and whose house is paid for.

Making the precise determination about how much insurance is needed also depends on other assets that are likely to be available at the time of death. Will a surviving spouse be entitled to the deceased’s retirement benefits? Will they be entitled to continuing employer-sponsored health benefits? A thorough examination of an individual’s current and future expected finances is necessary to determine an appropriate amount of life insurance.

As a rule of thumb, however, some financial experts recommend that individuals have a life insurance policy sufficient to replace two to six times their annual income, depending on individual needs. Therefore, if an individual has an annual income of $100,000, his or her life insurance policy should be for between $200,000 and $600,000.

C. SELECTING A BENEFICIARY

If an individual is married and has dependent children, his or her spouse is most likely going to be the beneficiary of his or her life insurance policy. If the individual is unmarried and has small children, he or she will likely need to select a trustee to manage the proceeds of the insurance policy. In such a case, the children would technically be the beneficiaries, but the proceeds would be placed in a trust managed by a third party. Each person’s circumstances are different. Generally, the life insurance should be paid to the person or persons for whom the deceased was responsible during his or her lifetime.

D. OVERVIEW OF TYPES OF LIFE INSURANCE

Traditionally, there were basically two types of life insurance: term, or “pure” life insurance, or whole life, also referred to as investment insurance. Term insurance provides protection for a specified term of years. It is normally cheaper than whole insurance, particularly when the insured is relatively young. It has value only if the insured dies. Whole insurance, on the other hand, has some cash value even if the
insured does not die. It is normally more expensive than simple term insurance. Its utility as an estate planning or an investment tool is normally fairly limited. In today’s marketplace, individuals also have to consider three other options: variable life insurance, universal life insurance and universal variable life insurance.

### TABLE 16-1. TYPE OF LIFE INSURANCE

<table>
<thead>
<tr>
<th>Type of Policy</th>
<th>Positives</th>
<th>Negatives</th>
</tr>
</thead>
<tbody>
<tr>
<td>Term Life</td>
<td>• Usually inexpensive.</td>
<td>• No cash value; • Not always renewable.</td>
</tr>
<tr>
<td>Whole Life</td>
<td>• Pays a death benefit to the beneficiary and a low risk cash value account and tax-deferred cash accumulation; • Provides a fixed premium which cannot increase during insured’s lifetime as long as payments are made; • Insurance company manages the cash value of policy; • Insured can receive dividends or use them to defray premiums; • Funds can be withdrawn during insured’s lifetime.</td>
<td>• Does not allow insured opportunity to select own investment options; • Does not allow insured to move money between accounts; • Does not offer flexibility in amount of premium or face amount of policy</td>
</tr>
<tr>
<td>Variable Life</td>
<td>• Pays a death benefit to the beneficiary and provides insured with low-risk, tax-free cash accumulation; • Allows the death benefit to vary in relation to the fund returns of the cash value account; • Allows insured to borrow from the policy during their lifetime.</td>
<td>• Offers no guarantee to the amount of cash value during insured’s lifetime; • Provides no premium or face amount flexibility.</td>
</tr>
<tr>
<td>Universal Life</td>
<td>• Pays a death benefit to named beneficiary and offers low-risk cash value account and tax-deferred accumulation; • Allows insured to earn market rates of interest on cash value account; • Offers the right to borrow or withdraw from the policy during insured’s lifetime; • Allows premium and face amount flexibility.</td>
<td>• Does not allow insured to invest in separate accounts such as money market or stock funds; • Does not allow flexibility to split money between different accounts.</td>
</tr>
<tr>
<td>Type of Policy</td>
<td>Positives</td>
<td>Negatives</td>
</tr>
<tr>
<td>------------------------</td>
<td>------------------------------------------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Universal Variable Life</td>
<td>• Pays a death benefit to the beneficiary and offers low-risk tax-deferred cash value options; • Offers separate accounts for investment, such as stock and bond funds; • Offers premium flexibility; • Allows insured to make withdrawals or to borrow from the policy during their lifetime.</td>
<td>• Requires policyholder to devote time to manage the accounts; • Does not work well with small premium amounts because premium must cover insurance and accounts.</td>
</tr>
</tbody>
</table>

1. Term Life Insurance

Term life insurance is “pure” life insurance. It has a value only if the insured dies during the life of the policy. If the insured outlives the stated term of the policy, it has absolutely no value. Most term life insurance policies have specific terms. When purchasing a term life insurance policy, one should always determine if and under what circumstances the policy is renewable. That is because such a policy might be relatively inexpensive for an individual who is healthy and 30 years old. But what happens if, when the policy expires, the individual has become quite ill. Will he or she have the option of renewing? And at what price? Term life insurance is cheapest to buy when an individual is young. Rates generally increase with age.

2. Whole Life Insurance

Whole life insurance offers the combination of “pure” life insurance along with an investment component. The cost of the premiums covers the pure insurance as well as amounts invested by the insurance company. As a result, it is more expensive than term life insurance. Whole life policies often guarantee a minimum rate of return, often between four and six percent. If the investment selections are good, the cash value of the account can exceed the guaranteed return.

a. Income Tax Liability

There is no income tax liability on the account unless the policy is canceled and the proceeds withdrawn. Many such policies will also allow the insured to borrow against their account. The interest on these loans is generally credited to the insured’s account. By “borrowing” the cash from your whole life insurance policy, no taxable event is triggered.

b. Cash Value

Technically, the cash values are supposed to be explained as tax deferred, not tax-free. The truth is, they may only be tax deferred, meaning tax will have to be paid on them someday; or they may end up being tax-free altogether. If the individual dies, the actual life insurance portion and the cash value are lumped together as one whole and called the death benefit, or life insurance proceeds, which, under most circumstances, are exempt from income tax.
3. Variable Life Insurance

Variable life insurance is similar to whole life insurance, except the cash value and/or the death benefits are not fixed. They vary depending on the results of the investments made from the owner’s separate account. The owner of the policy chooses how the money is invested.

The insurance company will offer a list of different types of investment accounts to choose from such as stock funds, bond funds, or money market funds. The individual investment accounts are managed by either the insurance company itself, or by an outside investment firm. The goal of variable life insurance is for the death benefits to keep up with the rate of inflation.

4. Universal Life Insurance

Universal life insurance is permanent life insurance that includes both pure insurance and investment components, similar to whole life. However, universal life insurance allows the owner to adjust either the amount of premiums to be paid or the amount of the death benefits to be paid at death. The rate of return on the investment component is based on the results of the company’s general asset account. The owner is not allowed to dictate what type of investments are made.

Because universal life insurance is intended to be a policy that individuals maintain during their entire life, the premiums can be adjusted so that they are equal over their lifetime, they pay them only for a set number of years, or they are more in the beginning years and then lower in later years, for example after the individual retires.

5. Universal Variable Life Insurance

Universal variable life insurance combines the features of universal insurance and variable insurance. The owner is able to choose the types of investments made by the cash value account and the account grows according to the returns on those investments. The owner can also adjust the amount of the premiums or death benefit of the policy. This type of policy offers the owner the most flexibility in meeting his/her insurance needs.

E. IMPACT OF INSURANCE ON TAXABLE INCOME

The proceeds from a decedent’s life insurance policy paid by reason of his or her death generally are excluded from income. The exclusion applies to any beneficiary, whether a family member or other individual, a corporation, or a partnership.

1. Veterans’ Insurance Proceeds

Veterans’ insurance proceeds and dividends are not taxable either to the veteran or to the beneficiaries. Interest on dividends left on deposit with the Department of Veterans Affairs is not taxable.

2. Life Insurance Proceeds

Life insurance proceeds paid because of the death of the insured (or because the insured is a member of the U.S. uniformed services who is missing in action) are not taxable unless the policy was turned
over for a price. This is true even if the proceeds are paid under an accident or health insurance policy or an endowment contract.

3. Accelerated Death Benefits

Accelerated death benefits received on the life of an insured individual can be excluded from income if certain requirements are met. Accelerated death benefits are amounts received under a life insurance contract before the death of the insured. These benefits also include amounts received on the sale or assignment of the contract to a viatical settlement provider. This exclusion applies only if the insured was a terminally ill individual or a chronically ill individual. This exclusion does not apply if the insured is a director, officer, employee, or has a financial interest, in any trade or business carried on by the beneficiary.

a. Terminally Ill Individual

A terminally ill individual is one who has been certified by a physician as having an illness or physical condition that reasonably can be expected to result in death in 24 months or less from the date of certification.

b. Chronically Ill Individual

A chronically ill individual is one who has been certified as one of the following:

- An individual who, for at least 90 days, is unable to perform at least two activities of daily living without substantial assistance due to a loss of functional capacity; and
- An individual who requires substantial supervision to be protected from threats to health and safety due to severe cognitive impairment.

A certification must have been made by a licensed health care practitioner within the previous 12 months.

c. Exclusion Limited

If the insured was a chronically ill individual, the exclusion of accelerated death benefits is limited to the cost incurred in providing qualified long-term care services for the insured. In determining the cost incurred, do not include amounts paid or reimbursed by insurance or otherwise. Subject to certain limits, payments received on a periodic basis can be excluded without regard to their costs.

4. Insurance Received in Installments

If an individual receives life insurance proceeds in installments, he or she can exclude part of each installment from his or her income. To determine the part excluded, an individual must divide the amount held by the insurance company (generally the total lump sum payable at the death of the insured person) by the number of installments to be paid. The individual includes anything over this excluded part in his or her income as interest.
a. Specified Number of Installments

If an individual will receive a specified number of installments under the insurance contract, he or she can figure the part of each installment he or she can exclude by dividing the amount held by the insurance company by the number of installments to which he or she is entitled. A secondary beneficiary, in case the individual dies before receiving all of the installments, is entitled to the same exclusion.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>As beneficiary, Mary chooses to receive $40,000 of life insurance proceeds in ten annual installments of $6,000. Each year, Mary can exclude from her income $4,000 ($40,000 ÷ 10) as a return of principal. The balance of the installment, $2,000, is taxable as interest income.</td>
</tr>
</tbody>
</table>

b. Specified Amount Payable

If each installment an individual receives under the insurance contract is a specific amount based on a guaranteed rate of interest, but the number of installments the individual will receive is uncertain, the part of each installment that he or she can exclude from income is the amount held by the insurance company divided by the number of installments necessary to use up the principal and guaranteed interest in the contract.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>The face amount of the policy is $200,000, and as beneficiary John chooses to receive annual installments of $12,000. The insurer's settlement option guarantees John this amount for 20 years based on a guaranteed rate of interest. It also provides that extra interest may be credited to the principal balance according to the insurer's earnings. The excludable part of each guaranteed installment is $10,000 ($200,000 ÷ 20 years). The balance of each guaranteed installment, $2,000, is interest income to John. The full amount of any additional payment for interest is income to John.</td>
</tr>
</tbody>
</table>

c. Installments for Life

If, as the beneficiary under an insurance contract, an individual is entitled to receive the proceeds in installments for the rest of his or her life without a refund or period-certain guarantee, the individual must figure the excluded part of each installment by dividing the amount held by the insurance company by his or her life expectancy. If there is a refund or period-certain guarantee, the amount held by the insurance company for this purpose is reduced by the actuarial value of the guarantee.
As beneficiary, Roger chooses to receive the $50,000 proceeds from a life insurance contract under a life-income-with-cash-refund option. Roger is guaranteed $2,700 a year for the rest of his life (which is estimated by use of mortality tables to be 25 years from the insured’s death). The actuarial value of the refund feature is $9,000. The amount held by the insurance company, reduced by the value of the guarantee, is $41,000 ($50,000 - $9,000) and the excludable part of each installment representing a return of principal is $1,640 ($41,000 ÷ 25). The remaining $1,060 ($2,700 - $1,640) is interest income to Roger. If Roger should die before receiving the entire $50,000, the refund payable to the refund beneficiary is not taxable.

5. Interest Option on Insurance

If an insurance company pays an individual interest only on proceeds from life insurance left on deposit, the interest the individual is paid is taxable.

6. Flexible Premium Contracts

A life insurance contract (including any qualified additional benefits) is a flexible premium life insurance contract if it provides for the payment of one or more premiums that are not fixed by the insurer as to both timing and amount. For a flexible premium contract issued before January 1, 1985, the proceeds paid under the contract because of the death of the insured will be excluded from the recipient's income only if the contract meets the requirements explained under section 101(f) of the Internal Revenue Code.

II. VARIABLE ANNUITIES

A. OVERVIEW

Variable annuities have become a part of the retirement and investment plans of many Americans. This section will provide a general description of variable annuities – what they are, how they work, and the charges investors often pay.

A variable annuity is a contract between an individual and an insurance company, under which the insurer agrees to make periodic payments to the investor, beginning either immediately or at some future date. An individual purchases a variable annuity contract by making either a single purchase payment or a series of purchase payments.

A variable annuity offers a range of investment options. The value of the investment will vary depending on the performance of the investment options chosen. The investment options for a variable annuity are typically mutual funds that invest in stocks, bonds, money market instruments, or some combination of the three.
Although variable annuities are typically invested in mutual funds, variable annuities differ from mutual funds in several important ways:

- First, variable annuities let investors receive periodic payments for the rest of their life (or the life of his or her spouse or any other person so designated). This feature offers protection against the possibility that, after the investor retires, he or she will outlive his or her assets;

- Second, variable annuities have a death benefit. If the owner dies before the insurer has started making payments, the beneficiary is guaranteed to receive a specified amount – typically at least the amount of the investor’s purchase payments. The beneficiary will get a benefit from this feature if, at the time of the investor’s death, the account value is less than the guaranteed amount; and

- Third, variable annuities are tax-deferred. That means the investor pays no taxes on the income and investment gains from the annuity until he or she withdraws his or her money. Investors may also transfer their money from one investment option to another within a variable annuity without paying tax at the time of the transfer. When money is taken out of a variable annuity, however, the investor will be taxed on the earnings at ordinary income tax rates rather than lower capital gains rates. In general, the benefits of tax deferral will outweigh the costs of a variable annuity only if the investor holds it as a long-term investment to meet retirement and other long-range goals.

**B. TAX CONSIDERATIONS**

Accountants should remember that other retirement vehicles, such as IRAs and employer-sponsored 401(k) plans, also may provide investors with tax-deferred growth and other tax advantages. For most investors, it will be advantageous to make the maximum allowable contributions to IRAs and 401(k) plans before investing in a variable annuity. In addition, if an individual is investing in a variable annuity through a tax-advantaged retirement plan (such as a 401(k) plan or IRA), he or she will get no additional tax advantage from the variable annuity. Under these circumstances, the individual should consider buying a variable annuity only if it makes sense because of the annuity’s other features, such as lifetime income payments and death benefit protection.

**C. LONG-TERM INVESTMENT OPTION**

Variable annuities are designed to be long-term investments, to meet retirement and other long-range goals. Variable annuities are usually not suitable for meeting short-term goals because substantial taxes and insurance company charges may apply if investors withdraw their money early. Variable annuities also involve investment risks, just as mutual funds do.

**D. INVESTMENT PHASES**

A variable annuity has two phases: an accumulation phase and a pay-out phase.
1. Accumulation Phase

During the accumulation phase, investors make purchase payments, which can be allocated to a number of investment options. For example, an investor could designate 40% of his purchase payments to a bond fund, 40% to a U.S. stock fund, and 20% to an international stock fund. The money the investor has allocated to each mutual fund investment option will increase or decrease over time, depending on the fund’s performance.

Variable annuities often allow investors to allocate part of their purchase payments to a fixed account. A fixed account, unlike a mutual fund, pays a fixed rate of interest. The insurance company may reset this interest rate periodically, but it will usually provide a guaranteed minimum (e.g., 3% per year).

Example

Jillian purchased a variable annuity with an initial purchase payment of $10,000. She allocated 50% of that purchase payment ($5,000) to a bond fund, and 50% ($5,000) to a stock fund. Over the following year, the stock fund has a 10% return, and the bond fund has a 5% return. At the end of the year, Jillian's account has a value of $10,750 ($5,500 in the stock fund and $5,250 in the bond fund), minus fees and charges.

An investor’s most important source of information about a variable annuity's investment options is the prospectus. Investors considering a variable annuity should request the prospectuses for the mutual fund investment options and read them carefully before allocating purchase payments among the investment options offered. Factors to be considered in making an allocation include the following:

- The fund’s investment objectives and policies;
- Management fees and other expenses that the fund charges;
- The risks and volatility of the fund; and
- Whether the fund contributes to the diversification of the investor’s overall investment portfolio.

During the accumulation phase, investors can typically transfer their money from one investment option to another without paying tax on investment income and gains, although the investor may be charged by the insurance company for transfers.

However, if the investor withdraws money from his or her account during the early years of the accumulation phase, he or she may have to pay “surrender charges,” which are discussed below. In addition, he or she may have to pay a 10% federal tax penalty if the money is withdrawn before the age of 59½.

2. Pay-Out Phase

At the beginning of the pay-out phase, investors may receive their purchase payments plus investment
income and gains (if any) as a lump-sum payment, or may choose to receive them as a stream of payments at regular intervals (generally monthly).

If an investor chooses to receive a stream of payments, he or she may have a number of choices of how long the payments will last. Under most annuity contracts, investors can choose to have their annuity payments last for a period determined by him or her (such as 20 years) or for an indefinite period (such as their lifetime or the lifetime of him or her and his or her spouse or other beneficiary). During the payout phase, an investor’s annuity contract may permit him to choose between receiving payments that are fixed in amount or payments that vary based on the performance of mutual fund investment options.

The amount of each periodic payment will depend, in part, on the time period that the investor selects for receiving payments. Remember, however, that some annuities do not allow investors to withdraw money from their account once they have started to receive regular annuity payments.

In addition, some annuity contracts are structured as immediate annuities, which means that there is no accumulation phase and investors will start receiving annuity payments right after they purchase the annuity.

E. THE DEATH BENEFIT AND OTHER FEATURES

A common feature of variable annuities is the death benefit. If the investor dies, a person he or she selects as a beneficiary (such as their spouse or child) will receive the greater of: (i) all the money in the account, or (ii) some guaranteed minimum (such as all purchase payments minus prior withdrawals).

**Example**

Martin owns a variable annuity that offers a death benefit equal to the greater of account value or total purchase payments minus withdrawals. He has made purchase payments totaling $50,000. In addition, he has withdrawn $5,000 from his account. Because of these withdrawals and investment losses, his account value is currently $40,000. If he dies, his designated beneficiary will receive $45,000 (the $50,000 in purchase payments he put in minus $5,000 in withdrawals).

Some variable annuities allow investors to choose a “stepped-up” death benefit. Under this feature, the guaranteed minimum death benefit may be based on a greater amount than purchase payments minus withdrawals. For example, the guaranteed minimum might be the account value as of a specified date, which may be greater than purchase payments minus withdrawals if the underlying investment options have performed well. The purpose of a stepped-up death benefit is to “lock in” the investment performance and prevent a later decline in the value of the account from eroding the amount that the investor expects to leave to his or her heirs. This feature carries a charge, however, which will reduce the value of the account.

Variable annuities sometimes offer other optional features, which also have extra charges. One common feature, the guaranteed minimum income benefit, guarantees a particular minimum level of annuity...
payments, even if the investor does not have enough money in his or her account (perhaps because of investment losses) to support that level of payments. Other features may include long-term care insurance, which pays for home health care or nursing home care if the investor becomes seriously ill.

**F. VARIABLE ANNUITY CHARGES**

Investors will pay several charges when they invest in a variable annuity. These charges will reduce the value of their account and the return on the investment. Often, they will include the following.

1. **Surrender Charges**

   If the investor withdraws money from a variable annuity within a certain period after a purchase payment (typically within six to eight years, but sometimes as long as ten years), the insurance company usually will assess a “surrender” charge, which is a type of sales charge. This charge is used to pay the investor’s financial professional a commission for selling the variable annuity. Generally, the surrender charge is a percentage of the amount withdrawn, and declines gradually over a period of several years, known as the “surrender period.”

   For example, a 7% charge might apply in the first year after a purchase payment, 6% in the second year, 5% in the third year, and so on until the eighth year, when the surrender charge no longer applies. Often, contracts will allow investors to withdraw part of their account value each year – 10% or 15% of their account value, for example – without paying a surrender charge.

   **Example**

   Lisa purchases a variable annuity contract with a $10,000 purchase payment. The contract has a schedule of surrender charges, beginning with a 7% charge in the first year, and declining by 1% each year. In addition, Lisa is allowed to withdraw 10% of her contract value each year free of surrender charges.

   In the first year, Lisa decides to withdraw $5,000, or one-half of her contract value of $10,000 (assuming that her contract value has not increased or decreased because of investment performance). In this case, Lisa could withdraw $1,000 (10% of contract value) free of surrender charges; she would pay a surrender charge of 7%, or $280, on the other $4,000 withdrawn.

2. **Mortality and Expense Risk Charge**

   This charge is equal to a certain percentage of the account's value, typically in the range of 1.25% per year. This charge compensates the insurance company for insurance risks it assumes under the annuity contract. Profit from the mortality and expense risk charge is sometimes used to pay the insurer’s costs of selling the variable annuity, such as a commission paid to the investor’s financial professional for selling the variable annuity to him.
Example

Tyler's variable annuity has a mortality and expense risk charge of an annual rate of 1.25% of account value. His average account value during the year is $20,000, so he will pay $250 in mortality and expense risk charges that year.

3. Administrative Fees

The insurer may deduct charges to cover record-keeping and other administrative expenses. This may be charged as a flat account maintenance fee (perhaps $25 or $30 per year) or as a percentage of the account value (typically in the range of 0.15% per year).

Example

Paul's variable annuity charges administrative fees at an annual rate of 0.15% of account value. His average account value during the year is $50,000. He will pay $75 in administrative fees.

4. Underlying Fund Expenses

Investors will also indirectly pay the fees and expenses imposed by the mutual funds that are the underlying investment options for their variable annuity.

5. Fees and Charges for Other Features

Special features offered by some variable annuities, such as a stepped-up death benefit, a guaranteed minimum income benefit, or long-term care insurance, often carry additional fees and charges. Other charges, such as initial sales loads, or fees for transferring part of an investor’s account from one investment option to another, may also apply.

G. TAX FREE “1035” EXCHANGES

Section 1035 of the U.S. tax code allows investors to exchange an existing variable annuity contract for a new annuity contract without paying any tax on the income and investment gains in their current variable annuity account. These tax-free exchanges, known as 1035 exchanges, can be useful if another annuity has preferred features, such as a larger death benefit, different annuity pay-out options, or a wider selection of investment choices.

Investors may, however, be required to pay surrender charges on the old annuity if they are still in the surrender charge period. In addition, a new surrender charge period generally begins when he exchanges into the new annuity. This means that, for a significant number of years (as many as 10 years), an investor typically will have to pay a surrender charge (which can be as high as 9% of his or
her purchase payments) if he or she withdraws funds from the new annuity. Further, the new annuity may have higher annual fees and charges than the old annuity, which will reduce the investment’s returns. If an investor surrenders an old annuity for cash and then buys a new annuity, he or she will have to pay tax on the surrender.

H. BONUS CREDITS

Some insurance companies are now offering variable annuity contracts with “bonus credit” features. These contracts promise to add a bonus to an investor’s contract value based on a specified percentage (typically ranging from 1% to 5%) of purchase payments.

**Example**

Stasia purchases a variable annuity contract that offers a bonus credit of 3% on each purchase payment. She makes a purchase payment of $20,000. The insurance company issuing the contract adds a bonus of $600 to her account.

Remember, however, that variable annuities with bonus credits may carry a downside, however – higher expenses that can outweigh the benefit of the bonus credit offered.

Frequently, insurers will also charge investors for bonus credits in one or more of the following ways:

- Surrender charges may be higher for a variable annuity that pays investors a bonus credit than for a similar contract with no bonus credit;
- An investor’s purchase payments may be subject to surrender charges for a longer period than he or she would be under a similar contract with no bonus credit; and
- Higher annual mortality and expense risk charges may be deducted for a variable annuity that pays a bonus credit. Although the difference may seem small, over time it can add up. In addition, some contracts may impose a separate fee specifically to pay for the bonus credit.

Before purchasing a variable annuity with a bonus credit, investors need to ask themselves whether the bonus is worth more to them than any increased charges they will pay for the bonus. This may depend on a variety of factors, including the amount of the bonus credit and the increased charges, how long they hold their annuity contract, and the return on the underlying investments. Investors also need to consider the other features of the annuity to determine whether it is a good investment.
Example

Kyle makes purchase payments of $10,000 in Annuity A and $10,000 in Annuity B. Annuity A offers a bonus credit of 4% on his purchase payment, and deducts annual charges totaling 1.75%. Annuity B has no bonus credit and deducts annual charges totaling 1.25%. Let’s assume that both annuities have an annual rate of return, prior to expenses, of 10%. By the tenth year, Kyle’s account value in Annuity A will have grown to $22,978. But his account value in Annuity B will have grown more, to $23,136, because Annuity B deducts lower annual charges, even though it does not offer a bonus.

Investors should also note that a bonus may only apply to their initial premium payment, or to premium payments made within the first year of the annuity contract. Further, under some annuity contracts the insurer will take back all bonus payments made to an investor within the prior year or some other specified period if he or she makes a withdrawal, if a death benefit is paid to the investor’s beneficiaries upon their death, or in other circumstances.

If someone already owns a variable annuity and is thinking of exchanging it for a different annuity with a bonus feature, they should be careful. Even if the surrender period on his or her current annuity contract has expired, a new surrender period generally will begin when they exchange that contract for a new one. This means that, by exchanging their contract, they will forfeit their ability to withdraw money from their account without incurring substantial surrender charges. And as described above, the schedule of surrender charges and other fees may be higher on the variable annuity with the bonus credit than they were on the annuity that they exchanged.

Example

Courtney currently holds a variable annuity with an account value of $20,000, which is no longer subject to surrender charges. She exchanges that annuity for a new variable annuity, which pays a 4% bonus credit and has a surrender charge period of eight years, with surrender charges beginning at 9% of purchase payments in the first year. Courtney’s account value in this new variable annuity is now $20,800. During the first year she holds the new annuity, she decides to withdraw all of her account value because of an emergency situation. Assuming that her account value has not increased or decreased because of investment performance, she will receive $20,800 minus 9% of her $20,000 purchase payment, or $19,000. This is $1,000 less than she would have received if she had stayed in the original variable annuity, where she was no longer subject to surrender charges.

In short, investors should take a hard look at bonus credits. In some cases, “bonus” may not be a good deal.
I. FINAL CONSIDERATIONS

Variable annuity contracts typically have a “free look” period of ten or more days, during which investors can terminate the contract without paying any surrender charges and get back their purchase payments (which may be adjusted to reflect charges and the performance of their investment). Individuals can continue to ask questions in this period to make sure they understand their variable annuity before the “free look” period ends.

Investors and their advisors should always consider the following questions before buying a variable annuity:

- Will the investor use the variable annuity primarily to save for retirement or a similar long-term goal?
- Is the individual investing in the variable annuity through a retirement plan or IRA (which would mean that he or she is not receiving any additional tax-deferral benefit from the variable annuity)?
- Is the individual willing to take the risk that his or her account value may decrease if the underlying mutual fund investment options perform badly?
- Does the individual understand the features of the variable annuity?
- Does the investor understand all of the fees and expenses that the variable annuity charges?
- Does the investor intend to remain in the variable annuity long enough to avoid paying any surrender charges if he or she has to withdraw money?
- If a variable annuity offers a bonus credit, will the bonus outweigh any higher fees and charges that the product may charge?
- Are there features of the variable annuity, such as long-term care insurance, that the individual could purchase more cheaply separately?
- Has the investor considered all the tax consequences of purchasing an annuity, including the effect of annuity payments on his or her tax status in retirement?
- If the investor exchanges one annuity for another one, do the benefits of the exchange outweigh the costs, such as any surrender charges that will have to be paid if he or she withdraws the money before the end of the surrender charge period for the new annuity?
### CHAPTER 16: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

## CHAPTER 16: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| **1.** | **A.** Incorrect. Owners can borrow from these policies during their lifetime.  
**B.** Incorrect. The return on investments made by this type of insurance grows tax free for the owner.  
**C.** **CORRECT**. This type of policy, by definition, is variable, meaning the death benefit will depend on the success of the investments.  
**D.** Incorrect. This is true because the money paid for the policy is invested, giving the insured a chance to increase the value of the insurance over time.  
*(See pages 363 to 365 of the course material.)* |
| **2.** | **A.** Incorrect. The contract owner has no investment fund selection choices available to him.  
**B.** Incorrect. The contract holder’s premiums are only invested into the company’s general asset account. Therefore, no other funds - such as mutual fund selections - are available.  
**C.** **CORRECT**. Universal life insurance allows the contract owner to adjust either the amount of premiums to be paid or the amount of the death benefits to be paid at death. The rate of return of the investment component is based on the results of the company’s general asset account.  
**D.** Incorrect. The contract owner is not allowed to dictate what type of investments are made. This restriction applies to both the rate of return and the investment vehicle used.  
*(See page 365 of the course material.)* |
| **3.** | **A.** **CORRECT**. To the contrary, this type of financial planning tool gives the owner period income either immediately after the annuity is purchased or beginning at a fixed date in the future.  
**B.** Incorrect. Given their flexibility, they have become a popular retirement tool in America.  
**C.** Incorrect. Although the money is most commonly invested in mutual funds, there is a range of available investment options.  
**D.** Incorrect. This makes them a popular retirement tool. Owners can also fix the date at which they begin receiving payments.  
*(See pages 368 to 369 of the course material.)* |

Chapter Objective

After completing this chapter, you should be able to:

• Identify the basics of various kinds of trusts.

I. INTRODUCTION AND OVERVIEW

Anyone engaged in financial or estate planning needs to consider the use of trusts as a way to reduce income taxes. Trusts are flexible and useful vehicles that can be used for many reasons, including tax planning, estate planning and for charitable giving. A trust may be created during the life of the donor (called an *inter vivos* trust) or at the death of the donor (called a *testamentary* trust). The person who creates the trust is most commonly referred to as the *trustor* of the trust. Other terms commonly used to denote the trustor are “settlor” and “donor.” These are merely terms of art, and no precise term is required in creating a valid trust. A trust can be either revocable (in which case the trustor is free to change his or her mind and retrieve the property within the trust) or irrevocable.

A. PROPER SUBJECTS OF A TRUST

Virtually anything can be the subject of a trust – real property, personal property such as a coin collection and furniture, as well as stocks, bonds, and other investment vehicles. The only significant limitation is that a trust cannot be used for an illegal purpose or to support an illegal activity, i.e., a trust to support domestic terrorism would be invalid.

B. PARTIES TO A TRUST

1. Trustee

The trustee is the individual who is in charge of managing the trust. Every trust must have a trustee. If for whatever reason the trustee cannot serve, however, the trust will not fail. Rather, an alternative trustee will be named either by a court, or, by the trust document itself if it contained the name of an alternate trustee. In a living trust, the trustor may be the trustee and the beneficiary.

The trustee owes a fiduciary duty to the trustor and the beneficiaries. The trustee’s concern must be for the benefit of the beneficiary. This means that he or she must act in the best interest of the trustor. The specific powers of the trustee are either set forth in the trust document or provided for in accordance with applicable state law.
2. **Beneficiary**

The beneficiary or beneficiaries is the person or persons for whose benefit the trust was created. Without a beneficiary, the court cannot ascertain who should benefit from the trust. Nor is there a person who can enforce the obligations of the beneficiary. The beneficiary can be a specifically named individual or individuals or a class.

### Examples

**Example 1.** In his will, John creates a testamentary trust for the benefit of his sons, Roger, Emmitt and Michael. The proceeds are to be held in trust for the sons until they have all reached the age of 21. This is a trust in which the beneficiaries are specifically named.

**Example 2.** In his will, John, who is childless, creates a testamentary trust for the benefit of “my nieces and nephews.” Each niece and nephew is a beneficiary under the trust even though their names are not specifically used. This is referred to as a “class” gift.

3. **Trust Property**

To be valid, a trust must also have some identifiable trust property. No formal transfer of the property is required (with the exception of a requirement in some states where the subject of the trust is real property); a declaration is normally sufficient to change the nature of the property.

### C. TITLE TO TRUST PROPERTY

The creation of a trust vests equitable title with the beneficiary or beneficiaries, while legal title is transferred to the trustee. The exception is testamentary trusts, which do not come into being until the death of the trustor. Title to property that is the subject to a testamentary trust remains with the trustor until his or her death. In the case of a revocable trust, title can be reclaimed by the trustor according to the terms of the trust instrument. The language of the trust document establishes the terms and conditions for the usage of the assets of the trust.

### Examples

**Example 1.** Jack created a trust for the benefit of his son, Roger, the proceeds of which were to pay for Roger’s education. Any funds leftover at the end of his education were to be distributed to charity. Roger may not use the proceeds of the trust to buy a car, to take a vacation or to pay for a wedding. The limits are dictated by the language of the trust instrument.
Examples (continued)

**Example 2.** Richard established a trust for the benefit of his wife, Lois, so long as his wife remained alive. After Lois’ death, the proceeds are to be distributed to his children and grandchildren in equal amounts. Under the terms of this type of life interest, Lois is free to remain on and use the property, but is not free to dispose of or otherwise encumber it.

**D. STATE LAW**

State law plays an important role in governing the use of trusts. The formalities of trust creation differ from state to state and, to some extent, based upon the type of property that is the subject of the trust. In the case of real property, it is governed by the laws of the state in which the property is located. In the case of all other property, the law of the state of the trustor’s domicile generally governs the trust. An individual’s domicile is the state in which he or she makes his or her permanent home. Each person may have only one domicile. As always, refer to the laws of each state for more specific guidance.

**II. TRUST CREATION**

If a trustor establishes a trust through his or her will – a so-called testamentary trust – the trust provisions are contained in the will. If a trustor creates a will during his or her lifetime, its provisions will normally be contained in the trust document. Under some circumstances, no written document is required to create a trust so long as the trustor has declared the existence of the trust and transferred the trust property to the trustee, if required. As we said above, trusts are governed by state law. That means that anyone considering creating a trust should be familiar with the laws of their state of domicile. However, as an illustration, most states require each of the elements described below.

**A. REQUIRED ELEMENTS**

1. **Precatory Language**

Precatory language is an expression of the testator’s wish. There must be a declaration – either orally or in writing – to create a valid trust. As a practical matter, oral trusts are never a good idea. Even if they are technically enforceable, any problems that might arise during its administration would be difficult to resolve absent a written document to provide guidance. As with a will, the trustor must have the requisite intent to create a trust in order for the document to be effective. This intent is set forth in the precatory language.
Example

Roger, as part of his estate plan, drafted a living trust in which he was the primary beneficiary and his children, Bob and Brenda, were the contingent beneficiaries. The precatory language provides as follows: “I Roger Applebe, do hereby place all of my property, real and personal, in trust for my benefit during my lifetime and, at the end of my lifetime, for the benefit of my children Bob and Brenda.” This language is a clear indication of Roger’s intentions.

2. Writing Requirement

A trust that involves real property must generally be in writing. As we said above, however, it is a good idea to reduce any declaratory trust to writing in order to better protect the trustor’s wishes.

3. Delivery

In most cases, no formal hand over of property is required to execute a valid trust. A mere declaration of trust normally, however, requires delivery of the trust property in order to be effective. In addition, the title to certain property often must be placed in the name of the trust, i.e., real property or motor vehicles in certain circumstances.

4. Knowledge of Beneficiary

It is not necessary for the validity of a voluntary trust that the beneficiary have knowledge of the existence of the trust or its provisions.

B. SELECTION OF TRUSTEE

1. Characteristics of Trustee

An important component of establishing a trust is selecting the trustee. In the case of a living trust, of course, the donor can also act as the trustee. When making plans for after the donor has passed, however, there are a number of important considerations, including the following:

- Is the trustee likely to carry out my wishes?
- Is the trustee financially responsible?
- Is the trustee knowledgeable in the area of investing and taxes?
- In the case of a spendthrift trust, is the trustee able to say “no” to demands from the beneficiary?
Key characteristics of any trustee are integrity and financial responsibility. A trustor is able to name more than one trustee to serve simultaneously. These people would be referred to as “co-trustees.” It is also generally a good idea to name an alternative trustee in the event the first one becomes unable or unwilling to serve.

2. Banks or Other Financial Institutions

Persons with particularly large estates often choose a bank to act as trustee. This can be advantageous because the entire institution, not a single person, is responsible for the assets. On the other hand, the service might be less personal than from someone with an emotional interest in the trustor or beneficiary. Banks and other financial institutions normally only handle trusts with a minimum worth, i.e., $1 million. In addition, their fees may be higher than those charged by an individual.

C. FEES

The terms of a trust will normally set forth the fee, if any, the trustee is to receive for his or her services. Banks and other financial institutions generally set their own fees.

D. RULE AGAINST PERPETUAL TRUSTS

One significant limitation in the creation of a trust is the duration for which the trust is to last. With the exception of charitable trusts, state laws generally forbid trusts that last in perpetuity. Further limits were historically used in the rarely understood Rule Against Perpetuities.

E. NOTE ON PURE TRUSTS

A so-called pure trust is an arrangement that purports to create a separate entity without actually altering the taxpayer’s control over the property or business transferred to the pure trust. Generally, the trust issues certificates that represent ownership of the trust. Often “pure trusts” are involved in arrangements to create a separate entity. The pure trust may be treated as a sham for federal tax purposes depending on the trust terms and its actual operation. Therefore, the taxpayer who transfers property or a business to the trust must report all the income earned by the trust and is liable for the taxes. The transferor may not circumvent the tax system by structuring transactions with the purpose of evading taxes.

III. TYPES OF COMMON TRUSTS

There is no limit to the type of trusts that can be created or to the purposes for which they can be created. Accordingly, this section will provide a look into some of the more common types of trusts.
TABLE 17-1. COMMON TYPES OF TRUSTS

<table>
<thead>
<tr>
<th>Trust Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Charitable Trusts</td>
<td>Created to support a charitable purpose or purposes; may be used to fund annual gifts during lifetime with remainder either going to charity or to other beneficiary.</td>
</tr>
<tr>
<td>Discretionary Trusts</td>
<td>Give trustee “discretion” to determine timing and amount of distributions.</td>
</tr>
<tr>
<td>Insurance Trusts</td>
<td>Trusts established by trustor prior to death and funded by life insurance proceeds after death.</td>
</tr>
<tr>
<td>Living Trusts</td>
<td>Created while trustor is still alive. Trustor can also act as trustee. This type of trust is generally revocable but can be irrevocable.</td>
</tr>
<tr>
<td>Medicaid Qualifying Trusts</td>
<td>Trusts in which certain assets are placed in trust to ensure that trustor is entitled to Medicaid benefits.</td>
</tr>
<tr>
<td>Pot Trusts</td>
<td>One in which there are multiple beneficiaries, each of which is entitled to support from the trust. If one beneficiary requires more support, they are entitled to receive it pursuant to the terms of the trust.</td>
</tr>
<tr>
<td>Revocable Trusts</td>
<td>One which can be changed or eliminated at the option of the trustor.</td>
</tr>
<tr>
<td>Irrevocable Trusts</td>
<td>One which cannot be changed once created.</td>
</tr>
<tr>
<td>Spendthrift Trusts</td>
<td>Limit the ability of beneficiaries to waste assets by limiting timing and amount of payments.</td>
</tr>
<tr>
<td>Support Trusts</td>
<td>Provide that income is to be used to meet certain basic needs of beneficiary, such as rent, or for educational support.</td>
</tr>
<tr>
<td>Totten Trusts</td>
<td>Not technically a trust; this is a type of pay-on-death account.</td>
</tr>
<tr>
<td>Wealth Trusts</td>
<td>Trusts used to reduce tax liabilities of later generations of beneficiaries.</td>
</tr>
</tbody>
</table>

A. LIVING TRUSTS

Living trusts have been a fad in recent years. A living trust is simply a trust created during the lifetime of the trustor or donor in which the trustor is normally both the trustee and the beneficiary. This type of trust will also name a contingent beneficiary that will receive the assets of the trust at the trustor’s death. Common reasons for establishing a living trust are as follows:

- Assets distributed through a valid trust are not subject to the time or expense often associated with probate; and
- A trust can be used as a “will substitute” if it accounts for all of the trustor’s assets.

A living trust also acts to provide financial support to others without giving them control of the trust property.
Bill and Sally want to give financial help to their daughter, Elizabeth. Elizabeth is married to Mike, a compulsive gambler. Bill and Sally are certain that Mike will gamble away money given directly to Elizabeth. A trust may provide financial support to Elizabeth, while protecting the principal and income from Mike.

1. **Revocable Living Trusts**

Most people who create this type of trust – also referred to as an inter vivos trust – make it revocable so that they can remove their assets from the trust if changed circumstances warrant such a decision. The effect of this type of trust is normally transparent for the individual who creates it. They continue to buy and sell assets as any other individual. However, in the case of real property and other assets, title must be held in the name of the trust. In some states, a married person can only create a living trust with the participation of both spouses.

2. **Protecting the Spouse Against Revocable Trusts**

In many states, a living trust can only be created by the participation of both spouses because the transfer of the property is merely gratuitous. An elective share is not applicable in California because of the community property laws. In California, for example, there is no protection for a spouse as to the separate property of the other spouse.

3. **Tax Implications**

The living trust is unfortunately often hyped as a way to avoid estate and income taxes. While there may be some savings in income and gift taxes, as a general rule no one should consider a living trust as a way to avoid taxes.

In some cases, an irrevocable living trust can be used to shift income from high tax bracket taxpayers to lower bracket taxpayers, but only if the grantor trust rules are avoided. The irrevocable living trust can also be used to make gifts that qualify for the gift tax annual exclusion and reduce the taxable estate for estate tax purposes.

The potential income tax benefits of a living trust are obtained mainly by using irrevocable living trusts. If the grantor trust rules are avoided, the grantor is able to shift the income tax consequences of the trust to beneficiaries in a lower tax bracket. However, since the tax brackets for trusts were greatly compressed, using the trust entity as another taxpayer is usually not beneficial because the trust’s income reaches the highest marginal tax rate much sooner.

The living trust can also be used to obtain estate tax benefits. The traditional credit shelter trust can provide the surviving spouse with an income interest and limited rights to access the corpus, while keeping the trust out of the surviving spouse’s taxable estate at death.
There are some income tax benefits to having a probate estate. Individuals and trusts generally must choose a calendar year for the taxable year. The individual or trust must recognize income for tax purposes in the tax year in which it was earned. An estate, on the other hand, is able to pick a fiscal year as long as the fiscal year ends on the last day of a calendar month and does not exceed twelve months in length. This allows the estate to possibly defer the payment of income tax on estate distributions up to twenty-six months. If the taxpayer cannot eliminate or reduce the tax, this deferral of the tax is the next best option. Without a probate estate, no income tax deferral is possible.

In addition, estates do not have to make estimated income tax payments for two years after the death of the decedent. Trusts, on the other hand, are normally required to pay estimated taxes in the same manner as individuals, unless the trust is a grantor trust into which the residue of the decedent’s estate will pass under the will. In that case, the trust receives the same two-year reprieve from paying estimated taxes that a probate estate receives. If no will is admitted to probate, then this rule will apply to the trust which is primarily responsible for paying taxes, debts, and administration expenses.

B. SUPPORT AND DISCRETIONARY TRUSTS

This type of trust is often used to provide for the needs of children, grandchildren or other family members without distributing the assets themselves. In some cases, the trustee is given discretion to determine the needs of the beneficiary. Once the trustee makes a decision to disburse funds in the trust, creditors can seize those assets except if the assets are held in a spendthrift trust. Such a trust protects the beneficiary from the reach of creditors. The majority of American courts hold valid spendthrift trusts.

In the United States, there is an exception to the validity of spendthrift trusts. Where the settlor and the beneficiary are the same person, the courts will not hold the spendthrift provision valid. Claims for child support and spousal support are allowed notwithstanding a spendthrift provision. Therefore, in a number of states, the law allows invasion of the spendthrift trust for spousal and child support.

C. CHARITABLE TRUSTS

Charitable trusts are created for the benefit of a certain organization or cause. This is the one type of trust that can be created to last forever.

1. Tax Deductible

A charitable gift is 100% tax deductible. Thus, the giving of a charitable gift saves both the amount of the gift in income from the donors other income sources as well as the extinction of the tax that would have been owed had the donor retained the charitable sum in his or her estate.

2. Valid Charitable Purpose

A charitable trust must have a valid charitable purpose. States have adopted legislation requiring the trustee of a charitable trust to file documentation regarding the trust with the state. Likewise, the statutes generally require the trustee to file periodic statements of the transactions of the trust.
3. Cy Pres Doctrine

With respect to most trusts, human greed assures the fulfillment of the trust. However, when charitable trusts are involved, there are generally no identifiable beneficiaries. The Cy Pres Doctrine allows the Attorney General of the state to prosecute the enforcement of the trust. In order for the Cy Pres doctrine to apply, three conditions must be met:

- The gift must be to a charitable organization for a charitable purpose;
- The gift must be impossible, impractical or illegal to carry out the donor’s stated charitable purpose; and
- It must appear that the donor had a *general* charitable intent as opposed to a specific charitable intent.

4. Types of Charitable Trusts

There are various ways an individual who would like to leave money to charity can create a trust.

**a. Charitable Remainder Trust**

With this type of instrument, the donor transfers property to the trust and receives an immediate income tax deduction and avoids any capital gain taxes on donated appreciated property. In return, the donor receives an income stream generated by the trust assets either for a specified time or for life. At the end of that period, the charitable organization inherits the trust assets. The term of the trust must be for a life or lives or for a period of years not exceeding 20. At the end of the trust term the trust property belongs to one or more charitable organizations.

**b. Charitable Lead Trust**

This is an irrevocable trust with charitable and non-charitable beneficiaries in which the charitable beneficiaries receive either a fixed dollar amount each year (charitable lead annuity trust) or a fixed percentage of the value of the trust each year (charitable lead unitrust).

The term of the trust must be for a life or lives or for a term of years; at the end of the trust term, the trust property can revert to the grantor or belong to other non-charitable beneficiaries. It can be an effective technique to avoid percentage limitations on income tax charitable deductions or to reduce gift or estate taxes.

**c. Charitable Remainder Annuity Trust**

This is a charitable trust arrangement in which the donor or other beneficiary is paid annually an income of a fixed amount of at least 5% but not more than 50% of the initial fair market value of property placed in the trust. The term of the trust is for life or for a period of up to 20 years.

One or more qualified charitable organizations must be named to receive the remainder interest upon the death of the donor or other income beneficiaries. In addition, the value of the charitable remainder interest must be at least 10% of the net fair market value of all property transferred to the trust, as determined at the time of the transfer.
d. Charitable Remainder Unitrust

This is a charitable trust arrangement whereby the donor or other beneficiary is paid annually an income of a fixed percentage of at least 5% but not more than 50% of the annually revalued trust assets, either for life or for a period of up to 20 years.

One or more qualified charitable organizations must be named to receive the remainder interest upon the death of the donor or other income beneficiaries, and the value of the charitable remainder interest must be at least 10% of the net fair market value of all property transferred to the trust, as determined at the time of the transfer.

D. TESTAMENTARY TRUST

An individual can set up a testamentary trust in his or her will or direct certain assets from his or her estate to be put into a previously established trust. In the latter case, the will acts as a pour over will, as it pours certain assets into a trust. This type of “pour-over” will merely add the property to an already existing trust.

1. Reasons for Testamentary Trusts

There are several reasons individuals might consider a testamentary trust, including the following:

- To provide financial support for a surviving spouse while preserving the assets for children upon the death of the surviving spouse;
- To provide for the care of beneficiaries who are minors and therefore unable to manage the assets; and
- To care for incompetent beneficiaries, i.e., a mentally retarded child of the decedent.

2. Funding Testamentary Trusts

A trustor has many choices when planning how to fund a testamentary trust. Options include all of the following:

- Life insurance proceeds;
- Proceeds from the sale of a home;
- Pension benefits; or
- Proceeds from an individual retirement arrangement.

A number of factors, including estate tax issues, will affect the assets chosen to fund a testamentary trust.

E. IRREVOCABLE LIFE INSURANCE TRUST

The proceeds of a life insurance policy held in an individual’s estate, perhaps used to pay for estate taxes, is subject to estate tax. But if an irrevocable life insurance trust owns the policy, the proceeds will
not be included in the individual's estate. An individual may donate annually to the trust an amount equal to the premiums to pay for the policy. For these donations to qualify for the annual gift tax exclusion, the individual must use a complicated strategy called Crummey letters.

F. SPOUSAL TRUSTS

1. Bypass Trust

Special types of trusts are available to help spouses reduce estate taxes. A spouse (with the exception of a foreign-citizen spouse) can pass his or her entire estate tax free to the surviving spouse.

With the passage of recent legislation, the need for establishing a credit shelter trust (often called a "bypass trust") has been reduced but not eliminated, especially when remarriage or rapidly appreciating assets are expected to occur soon after the first spouse's death.

On December 18, 2010, the President signed the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 ("2010 Tax Relief Act") legislation, which extended the 2001 tax cuts for two years temporarily increasing estate, gift and generation-skipping tax exemption amounts and temporarily reducing the estate tax rate.

On January 1, 2013, Congress approved and the President signed, new legislation titled the American Taxpayer Relief Act of 2012 ("ATRA-2012"). This Act extended most of the sweeping changes originally made by the 2010 Tax Act. The single change exception was the increase of the top tax rate from 35% to 40%.

In summary, ATRA-2012 permanently extends current estate and gift tax policy, including the portability of a deceased spouse’s exemption to the surviving spouse without the use of the traditional credit shelter trust.

2. QTIP Trust

A provision of the Internal Revenue Code allows, as a marital deduction, a gift tax exemption of transfers of certain life estates to spouses. For the exemption to apply, the donor must create a Qualified Terminable Interest Property (QTIP) trust.

In general terms, transfers between spouses qualify for a marital deduction and thus are exempt from gift or estate tax. However, if the transfer is in the form of a life estate or other terminable interest, the marital deduction is generally not allowed. Additionally, there is an exception allowed under the gift tax for qualified terminable interest property. That interest is defined in § 2523(f)(1) as one "in which the donee spouse has a qualifying income interest for life, and to which an election under this subsection applies.”

That election must be made “on or before the date prescribed by § 6075(b) (generally April 15 of the year following the transfer unless the period is properly extended) for filing a gift tax return with respect to the transfer.” By regulation authorized under that provision, the election must be made on a timely filed gift tax return.

## CHAPTER 17: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

<table>
<thead>
<tr>
<th>Question</th>
<th>Correct Answer</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>B. <strong>CORRECT</strong></td>
<td>For the most part, individual state laws govern how trusts are created as well as the details of their operation. Federal law is most important with respect to income tax issues.</td>
</tr>
<tr>
<td></td>
<td>C. Incorrect.</td>
<td>Again, it is state law that controls this area of trusts.</td>
</tr>
<tr>
<td></td>
<td>D. Incorrect.</td>
<td>There is no such distinction. State law governs the creation and operation of trusts, regardless of their size.</td>
</tr>
<tr>
<td></td>
<td>(See page 383 of the course material.)</td>
<td></td>
</tr>
<tr>
<td>2.</td>
<td>D. <strong>CORRECT</strong></td>
<td>Both financial responsibility and knowledge of investing and taxes are essential characteristics for a good trustee and are certainly more important than having a personal relationship with the trustor.</td>
</tr>
<tr>
<td></td>
<td>A. Incorrect.</td>
<td>Having a strong personal relationship does not necessarily mean the individual has the skill set and knowledge to be an effective or competent trustee.</td>
</tr>
<tr>
<td></td>
<td>B. Incorrect.</td>
<td>Financial responsibility, including not giving in to demands of trust beneficiaries, is a very important trait for being a good trustee. However, this is not the best answer.</td>
</tr>
<tr>
<td></td>
<td>C. Incorrect.</td>
<td>Knowledge of both investment and tax laws are key to growing the assets of the trust and keeping as much of that money as possible. However, this is not the best answer.</td>

</table>
One objective of most people planning their estate is ensuring that adequate resources are available to help pay education costs of their heirs, notably their children and grandchildren. There are a number of options available to help meet this objective with substantial income tax savings. This chapter explains the tax benefits that may be available to individuals who are saving for or paying education costs for themselves or, in many cases, another student who is a member of their immediate family. Most benefits apply only to higher education. Also note that individuals generally cannot claim more than one of the benefits described in this chapter for the same qualifying education expense.

I. COVERDELL EDUCATION SAVINGS ACCOUNTS

A. OVERVIEW

Certain individuals are eligible to establish a Coverdell ESA to finance the qualified education expenses of a designated beneficiary.

There is no limit to the number of separate Coverdell ESAs that can be established for a designated beneficiary. However, total contributions for the beneficiary in any year cannot be more than $2,000, no matter how many accounts have been established. This benefit applies not only to higher education expenses, but also to elementary and secondary education expenses. Earnings on contributions will be distributed tax free, provided that they are used to pay the beneficiary’s elementary or secondary school or college education expenses.

</tr>
<tr>
<td>Tax Treatment of Distributions</td>
<td>Distributions are tax free so long as they do not exceed the</td>
</tr>
<tr>
<td></td>
<td>beneficiary's adjusted qualified expenses for the year.</td>
</tr>
</tbody>
</table>

Any individual who meets adjusted gross income (AGI) requirements can make a non-deductible contribution on behalf of a child under the age of 18. The AGI requirements are $95,000 for single taxpayers and $190,000 for married taxpayers. The $2,000 annual contribution limit is phased out for single taxpayers with AGI of $95,000 to $110,000 and for joint filers with AGI of $190,000 to $220,000. Contributions to a Coverdell ESA may be made until the due date of the contributor’s federal income tax return, without extensions.

Distributions are tax-free as long as they are used for qualified education expenses, such as tuition, books, fees, etc., at an eligible educational institution. This income exclusion is not available for any expenses for which the American Opportunity Credit or the lifetime learning credit is claimed for that student. If the distribution exceeds education expenses, a portion will be taxable to the beneficiary and will be subject to a 10% tax penalty. Exceptions to the penalty include the death or disability of the beneficiary or if the beneficiary receives a qualified scholarship.

If there is a balance in the Coverdell ESA at the time the beneficiary reaches 30 years old, it must be distributed within 30 days. A portion representing earnings on the account will be taxable and subject to a 10% penalty. The beneficiary may avoid this tax and penalty by rolling over the full balance to another Coverdell ESA for another family member.

Contributions to a Coverdell ESA are not deductible, but amounts deposited in the account grow tax free until distributed. If, for a year, distributions from an account are not more than a designated beneficiary’s qualified education expenses at an eligible educational institution, the beneficiary will not owe tax on the distributions.

**B. CREATION OF ACCOUNT**

A Coverdell ESA is a trust or custodial account created or organized in the United States only for the purpose of paying the qualified education expenses of the designated beneficiary of the account. When the account is established, the designated beneficiary must be under age 18 or a special needs
beneficiary. To be treated as a Coverdell ESA, the account must be designated as a Coverdell ESA when it is created. There are restrictions on how monies in the account can be invested. For example, the funds cannot be used to invest in life insurance contracts.

C. ELIGIBLE INSTITUTIONS

For purposes of Coverdell ESAs, an eligible educational institution can be either an eligible postsecondary school or an eligible elementary or secondary school.

1. Eligible Postsecondary School

This is any college, university, vocational school, or other postsecondary educational institution eligible to participate in a student aid program administered by the Department of Education. It includes virtually all accredited, public, nonprofit, and proprietary (privately owned profit-making) postsecondary institutions. The educational institution should be able to tell the investor if it is an eligible educational institution.

2. Eligible Elementary or Secondary School

This is any public, private, or religious school that provides elementary or secondary education (kindergarten through grade 12), as determined under state law.

D. QUALIFIED EXPENSES

Generally, these are expenses required for the enrollment or attendance of the designated beneficiary at an eligible educational institution. For purposes of Coverdell ESAs, the expenses can be either qualified higher education expenses or qualified elementary and secondary education expenses. Eligible educational institutions can include both postsecondary schools and elementary and secondary schools.

1. Qualified Higher Education Expenses

The following expenses must be required for enrollment or attendance of a designated beneficiary at an eligible postsecondary school:

- Tuition and fees; and
- Books, supplies, and equipment.

Expenses for special needs services needed by a special needs beneficiary must be incurred in connection with enrollment or attendance at an eligible postsecondary school.

Expenses for room and board must be incurred by students who are enrolled at least half-time. The expense for room and board qualifies only to the extent that it is not more than the greater of the following two amounts:

- The allowance for room and board, as determined by the school, that was included in the cost of attendance (for federal financial aid purposes) for a particular academic period and living arrangement of the student; and
• The actual amount charged if the student is residing in housing owned or operated by the school.

The purchase of computer or peripheral equipment, computer software, or Internet access and related services must be used primarily by the beneficiary during any of the years the beneficiary is enrolled at an eligible postsecondary school. (This does not include expenses for computer software for sports, games, or hobbies unless the software is predominantly educational in nature.)

A student is enrolled “at least half-time” if he or she is enrolled for at least half the full-time academic work load for the course of study the student is pursuing, as determined under the standards of the school where the student is enrolled.

2. Qualified Elementary and Secondary Education Expenses

These are expenses related to enrollment or attendance at an eligible elementary or secondary school. As shown in the following list, to be qualified, some of the expenses must be required or provided by the school. There are special rules for computer-related expenses.

The following expenses must be incurred by a designated beneficiary in connection with enrollment or attendance at an eligible elementary or secondary school:

• Tuition and fees;
• Books, supplies, and equipment;
• Academic tutoring; and
• Special needs services for a special needs beneficiary.

The following expenses must be required or provided by an eligible elementary or secondary school in connection with attendance or enrollment at the school:

• Room and board;
• Uniforms;
• Transportation; and
• Supplementary items and services (including extended day programs).

The purchase of computer technology, equipment, or Internet access and related services is a qualified elementary and secondary education expense if it is to be used by the beneficiary and the beneficiary’s family during any of the years the beneficiary is in elementary or secondary school. (This does not include expenses for computer software designed for sports, games, or hobbies unless the software is predominantly educational in nature.)
E. CONTRIBUTIONS

Any individual (including the designated beneficiary) can contribute to a Coverdell ESA if the individual’s modified adjusted gross income (MAGI) for the year is less than $110,000. For individuals filing joint returns, that amount is $220,000. Organizations, such as corporations and trusts, can also contribute to Coverdell ESAs. There is no requirement that an organization’s income be below a certain level.

1. Contribution Requirements

Contributions must meet all of the following requirements:

• They must be in cash;
• They cannot be made after the beneficiary reaches age 18, unless the beneficiary is a special needs beneficiary; and
• They must be made by the due date of the contributor’s tax return (not including extensions).

Contributions can be made to one or several Coverdell ESAs for the same designated beneficiary provided that the total contributions are not more than the contribution limits for a year. Contributions can be made, without penalty, to both a Coverdell ESA and a QTP in the same year for the same beneficiary.

2. Contribution Limits

There are two yearly limits:

• One on the total amount that can be contributed for each designated beneficiary in any year; and
• One on the amount that any individual can contribute for any one designated beneficiary for a year.

3. Limit for Each Designated Beneficiary

For 2016, the total of all contributions to all Coverdell ESAs set up for the benefit of any one designated beneficiary could not be more than $2,000. This includes contributions (other than rollovers) to all the beneficiary’s Coverdell ESAs from all sources.

Example

When Maria Luna was born in 2015, three separate Coverdell ESAs were set up for her, one by her parents, one by her grandfather, and one by her aunt. In 2016, the total of all contributions to Maria’s three Coverdell ESAs cannot be more than $2,000. For example, if her grandfather contributed $2,000 to one of her Coverdell ESAs, no one else could contribute to any of her three accounts. Or, if her parents contributed $1,000 and her aunt $600, her grandfather or someone else could contribute no more than $400. These contributions could be put into any of Maria’s Coverdell ESA accounts.
4. Limit for Each Contributor

Generally, individuals can contribute up to $2,000 for each designated beneficiary for 2016. This is the most that can be contributed for the benefit of any one beneficiary for the year, regardless of the number of Coverdell ESAs set up for the beneficiary.

5. Reduced Limit

Certain individuals are subject to a reduced contribution limit. If an individual’s modified adjusted gross income (MAGI) (defined below) is between $95,000 and $110,000 (between $190,000 and $220,000 if filing a joint return), the $2,000 limit for each designated beneficiary is gradually reduced. If his or her MAGI is $110,000 or more ($220,000 or more if filing a joint return), he or she cannot contribute to anyone’s Coverdell ESA.

<td>Only cash can be contributed to a Coverdell ESA. No other type of property or assets can be contributed.</td>
</tr>
<tr>
<td>Timing of Contributions</td>
<td>No contributions can be made to a beneficiary’s Coverdell ESA after he or she reaches age 18, unless the beneficiary is a special needs beneficiary.</td>
</tr>
</tbody>
</table>

F. ADDITIONAL TAX ON EXCESS CONTRIBUTIONS

The beneficiary must pay a 6% excise tax each year on excess contributions that are in a Coverdell ESA at the end of the year. Excess contributions are the total of the following two amounts:

- Contributions to any designated beneficiary’s Coverdell ESA for the year that are more than $2,000; and
• Excess contributions for the preceding year, reduced by the total of the following two amounts:
  ▪ Distributions (other than those rolled over as discussed later) during the year; and
  ▪ The contribution limit for the current year minus the amount contributed for the current year.

G. ROLLOVERS AND OTHER TRANSFERS

Assets can be rolled over from one Coverdell ESA to another. The designated beneficiary can be changed or the beneficiary’s interest can be transferred to a spouse or former spouse because of divorce.

1. Rollovers

Any amount distributed from a Coverdell ESA and rolled over to another Coverdell ESA for the benefit of the same beneficiary or a member of the beneficiary’s family (including the beneficiary’s spouse) who is under age 30 is not taxable. An amount is rolled over if it is paid to another Coverdell ESA within 60 days after the date of the distribution. For these purposes, the beneficiary’s family includes the beneficiary’s spouse and the following other relatives of the beneficiary:

• Son, daughter, stepchild, foster child, adopted child, or a descendant of any of them;
• Brother, sister, stepbrother, or stepsister;
• Father or mother or ancestor of either;
• Stepfather or stepmother;
• Son or daughter of a brother or sister;
• Brother or sister of father or mother;
• Son-in-law, daughter-in-law, father-in-law, mother-in-law, brother-in-law, or sister-in-law;
• The spouse of any individual listed above; or
• First cousin.

Only one rollover per Coverdell ESA is allowed during the 12-month period ending on the date of the payment or distribution.

2. Changing the Designated Beneficiary

The designated beneficiary can be changed to a member of the beneficiary’s family (defined above). There are no tax consequences if, at the time of the change, the new beneficiary is under age 30 or is a special needs beneficiary.
3. **Transfer Because of Divorce**

If a spouse or former spouse receives a Coverdell ESA under a divorce or separation instrument, it is not a taxable transfer. After the transfer, the spouse or former spouse treats the Coverdell ESA as his or her own.

**H. DISTRIBUTIONS**

The designated beneficiary of a Coverdell ESA can take a distribution at any time. Whether the distributions are tax free depends, in part, on whether the distributions are equal to or less than the amount of adjusted qualified education expenses that the beneficiary has in the same tax year. Distributions are not subject to tax so long as they do not exceed the designated beneficiary's qualified educational expenses for the year. This calculation takes into account any tax-free education assistance the beneficiary may have received, such as government grants or employer-provided educational assistance.

**TABLE 18-3. COVERDELL ESA DISTRIBUTIONS**

<table>
<thead>
<tr>
<th>Issue</th>
<th>Rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Taxation of Distribution</td>
<td>Generally, a distribution from a Coverdell ESA to pay for a designated beneficiary’s qualified education expenses is tax free to the extent it does not exceed the beneficiary’s qualified educational expenses.</td>
</tr>
<tr>
<td>Distribution of Remaining Assets</td>
<td>After the designated beneficiary completes his or her education at an eligible institution, the remaining assets in the account can generally be distributed. However, the amounts must be distributed when the designated beneficiary reaches age 30, unless he or she is a special needs beneficiary. Also, certain transfers to members of the beneficiary’s family are permitted.</td>
</tr>
<tr>
<td>Eligibility for Tax-Free Distribution</td>
<td>The designated beneficiary does not need to be enrolled for a minimum number of courses to take a tax-free distribution.</td>
</tr>
</tbody>
</table>

A portion of the distributions is generally taxable to the beneficiary if the distributions are more than the beneficiary’s adjusted qualified education expenses for the year.

**I. COORDINATION WITH LEARNING CREDITS**

Certain federal tax credits, i.e., the American opportunity or lifetime learning credit, can be claimed in the same year the beneficiary takes a tax-free distribution from a Coverdell ESA, as long as the same expenses are not used for both benefits. This means the beneficiary must reduce qualified higher
education expenses by tax-free educational assistance, and then further reduce them by any expenses taken into account in determining a American opportunity or lifetime learning credit.

**J. COORDINATION WITH QUALIFIED TUITION PROGRAM DISTRIBUTIONS (QTP)**

If a designated beneficiary receives distributions from both a Coverdell ESA and a QTP in the same year, and the total distribution is more than the beneficiary’s adjusted qualified higher education expenses, those expenses must be allocated between the distribution from the Coverdell ESA and the distribution from the QTP before figuring how much of each distribution is taxable.

**K. ADDITIONAL TAX ON TAXABLE DISTRIBUTIONS**

Generally, if an individual receives a taxable distribution, they also must pay a 10% additional tax on the amount included in income. The 10% additional tax does not apply to distributions:

- Paid to a beneficiary (or to the estate of the designated beneficiary) on or after the death of the designated beneficiary;

- Made because the designated beneficiary is disabled. A person is considered to be disabled if he or she shows proof that he or she cannot do any substantial gainful activity because of his or her physical or mental condition. A physician must determine that his or her condition can be expected to result in death or to be of long-continued and indefinite duration;

- Included in income because the designated beneficiary received:
  - A tax-free scholarship or fellowship grant;
  - Veterans’ educational assistance;
  - Employer-provided educational assistance; or
  - Any other nontaxable (tax-free) payments (other than gifts or inheritances) received as educational assistance.

- Made on account of the attendance of the designated beneficiary at a U.S. military academy (such as West Point). This exception applies only to the extent that the amount of the distribution does not exceed the costs of advanced education (as defined in Section 2005(d)(3) title 10 of the U.S. Code) attributable to such attendance;

- Included in income only because the qualified education expenses were taken into account in determining the American opportunity or lifetime learning credit; or

- Made before June 1, 2017, of an excess 2016 contribution (and any earnings on it). The distributed earnings must be included in gross income for the year in which the excess contribution was made.
L. WHEN ASSETS MUST BE DISTRIBUTED

Any assets remaining in a Coverdell ESA must be distributed when either one of the following two events occurs:

- The designated beneficiary reaches age 30. In this case, the remaining assets must be distributed within 30 days after the beneficiary reaches age 30. However, this rule does not apply if the beneficiary is a special needs beneficiary; or

- The designated beneficiary dies before reaching age 30. In this case, the remaining assets must generally be distributed within 30 days after the date of death.

If a Coverdell ESA is transferred to a surviving spouse or other family member as the result of the death of the designated beneficiary, the Coverdell ESA retains its status. This means the spouse or other family member can treat the Coverdell ESA as his or her own and does not need to withdraw the assets until he or she reaches age 30. This age limitation does not apply if the new beneficiary is a special needs beneficiary. There are no tax consequences as a result of the transfer.

When a total distribution is made because the designated beneficiary either reached age 30 or died, the earnings that accumulated tax free in the account must be included in taxable income.

II. OTHER EDUCATION SAVINGS ACCOUNTS

A. QUALIFIED TUITION PROGRAM (QTP)

A qualified tuition program, also known as a 529 college savings plan, is a type of investment account that allows individuals to set aside money for their child’s education. The money is then able to grow tax-free. The proceeds of the account are not subject to federal income tax so long as the funds are used for higher education. Unlike other types of college savings programs, any family can contribute to a 529 account regardless of income. The account is subject to a lifetime maximum contribution of roughly $300,000 (this varies from state to state).

The money in a 529 plan can be used at any accredited college or university in the country – public or private, graduate or undergraduate. The money can be used for tuition, fees, room and board, books, supplies, and equipment. All 529 plans are administered by individual states. While individuals are not required to invest in their state of domicile, there are normally additional advantages for doing so.

1. Tax Benefits

The primary tax benefit is that no tax is due on a distribution from a state-sponsored QTP unless the amount distributed is greater than the beneficiary’s adjusted qualified education expenses. In addition, even if a QTP is used to finance a student’s education, the student or the student’s parents still may be eligible to claim either the American Opportunity credit or the lifetime learning credit.

In addition, funds contributed to a 529 plan are not considered in assessing a student’s eligibility for financial assistance. The following are some of the advantages to a 529 plan.
Money invested in the account remains tax free as long as it is kept in the program. When money is taken out for educational expenses, investors will not pay federal taxes on either the principal or income. State tax treatment varies, although most states also do not tax withdrawals.

Another potential tax benefit of this savings option is that if an individual has a loss on his or her investment in a QTP account, he or she may be able to take the loss on his or her income tax return. A taxpayer can take the loss only when all amounts from that account have been distributed and the total distributions are less than his or her unrecovered basis. An individual's basis is the total amount of contributions to that QTP account. A taxpayer must claim the loss as a miscellaneous itemized deduction.

2. Contributions Considered a Gift

The money invested in a 529 account is considered a gift and, as a result, qualifies for the annual $14,000 gift tax exclusion. In addition, federal law allows individuals to contribute up to five years' worth of gifts in one year without incurring gift tax liability so long as no further proceeds are contributed over the following four years.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Randy and Ethel have one grandson, John. John is preparing to go to college in the fall. Randy and Ethel have not put any funds aside for the benefit of their grandson, but are now realizing that they need to reduce the size of their estate. They decide to place $70,000 in one year in a 529 plan account for the benefit of John. This allows them to reduce the size of their taxable estate by $70,000 and jump start an investment for their grandson’s higher education.</td>
</tr>
</tbody>
</table>

3. Control of Funds

Investors in a 529 plan can decide when and how much money to withdraw. Unlike certain types of custodial accounts, the beneficiary of the account does not attain control upon reaching a certain age, i.e., 18 or 21.

4. Flexibility

Individuals can open a 529 plan for themselves or someone else regardless of age. If a child or other beneficiary elects not to attend college or does not need all of the money invested, the funds can be rolled over for someone else’s benefit.
Example

Steve and his wife Catherine have four children, Katie, who is 4, and triplets who are 1. Steve and Catherine open a 529 plan for their oldest daughter and contribute the maximum amount allowed. By the time Katie is ready for college, the value of the fund is $350,000. Because Katie is brilliant, she is able to attend Stanford University on a full scholarship. Steve and Catherine are then able to use the proceeds from the account to pay for the education of their triplets, who each choose to attend expensive Ivy League colleges.

A 529 plan is not, of course, perfect. Investors are limited to the investment vehicles offered by the state sponsors of the program. In addition, funds from a 529 plan withdrawn and used for non-educational expenses are subject to a 10 percent penalty in addition to federal income taxes on earnings. Some states also apply a 10 percent tax.

5. Qualified Education Expenses

These expenses are the tuition, fees, books, supplies, and equipment required for enrollment or attendance at an eligible educational institution. They also include the reasonable costs of room and board for a designated beneficiary who is at least a half-time student. The definition of qualified education expenses also includes expenses of a special needs beneficiary that are necessary for that person’s enrollment or attendance at an eligible educational institution.

6. Designated Beneficiary

The designated beneficiary is generally the student (or future student) for whom the QTP is intended to provide benefits. The designated beneficiary can be changed after participation in the QTP begins. If a state or local government or certain tax-exempt organizations purchase an interest in a QTP as part of a scholarship program, the designated beneficiary is the person who receives the interest as a scholarship.

7. Amounts That Can Be Contributed

Contributions to a QTP on behalf of any beneficiary cannot be more than the amount necessary to provide for the qualified education expenses of the beneficiary. There are no income restrictions on the individual contributors. Individuals may contribute to both a QTP and a Coverdell ESA in the same year for the same designated beneficiary.

8. Tax Treatment of Distributions

The part of a distribution representing the amount paid or contributed to a QTP does not have to be included in income. This is a return of the investment in the plan. The designated beneficiary generally does not have to include in income any earnings distributed from a QTP established and maintained by a state (or an agency or instrumentality of the state) if the total distribution is less than or equal to adjusted qualified education expenses.
9. Coordination with American Opportunity and Lifetime Learning Credits

An American opportunity or lifetime learning credit (education credit) can be claimed in the same year the beneficiary takes a tax-free distribution from a QTP, as long as the same expenses are not used for both benefits. This means that after the beneficiary reduces qualified education expenses by tax-free educational assistance, he or she must further reduce them by the expenses taken into account in determining the credit.

10. Coordination with Coverdell ESA Distributions

If a designated beneficiary receives distributions from both a QTP and a Coverdell ESA in the same year, and the total of these distributions is more than the beneficiary’s adjusted qualified education expenses, the expenses must be allocated between the distributions. For purposes of this allocation, disregard any qualified elementary and secondary education expenses.

11. Coordination with Tuition and Fees Deduction

A tuition and fees deduction can be claimed in the same year the beneficiary takes a tax-free distribution from a QTP, as long as the same expenses are not used for both benefits.

12. Rollovers and Other Transfers

Assets can be rolled over or transferred from one QTP to another. The designated beneficiary can be changed or the beneficiary’s interest can be transferred to a spouse or former spouse because of divorce. In addition, any amount distributed from a QTP and rolled over to another QTP for the benefit of the same beneficiary or for the benefit of a member of the beneficiary’s family (including the beneficiary’s spouse) is not taxable. An amount is rolled over if it is paid to another QTP within 60 days after the date of the distribution.

For these purposes, the beneficiary’s family includes the beneficiary’s spouse and other designated relatives of the beneficiary, including a spouse, parents, children, and siblings. Only one rollover per QTP is allowed during the 12-month period ending on the date of the payment or distribution.

There are no income tax consequences if the designated beneficiary of an account is changed to a member of the beneficiary’s family.

B. IRA WITHDRAWAL

Individuals may make withdrawals from an individual retirement account (IRA) to pay the qualified higher education expenses for the taxpayer, the taxpayer’s spouse, or the child or grandchild of the taxpayer or taxpayer’s spouse at an eligible educational institution.

The taxpayer will owe federal income tax on the amount withdrawn, but will not be subject to the 10 percent early withdrawal tax that applies when amounts are withdrawn from an individual retirement account before the account holder reaches age 59½.

The 10 percent early withdrawal tax does not apply to a distribution from an IRA to the extent that the amount of the distribution does not exceed the qualified higher education expenses for the taxpayer, the
taxpayer’s spouse, and the child or grandchild of the taxpayer or the taxpayer’s spouse at an eligible educational institution. For purposes of this rule, the term “qualified higher education expenses” means tuition, fees, books, supplies and equipment required for the enrollment or attendance of the student at an eligible educational institution. Qualified higher education expenses also include room and board if the student is enrolled at least half-time.

Qualified higher education expenses paid with an individual’s earnings, a loan, a gift, an inheritance given to the student or the individual claiming the credit, or personal savings (including savings from a qualified state tuition program) are included in determining the amount of the IRA withdrawal which is not subject to the 10 percent early withdrawal tax. Qualified higher education expenses paid with a Pell Grant or other tax-free scholarship, a tax-free distribution from a Coverdell ESA, or tax-free employer-provided educational assistance are excluded.

In addition, individuals can make a withdrawal from a Roth IRA, as they can from other IRAs, to pay qualified higher education expenses without paying the 10 percent early withdrawal tax.

III. SAVINGS BONDS FOR EDUCATION

Generally, individuals must pay tax on the interest earned on U.S. savings bonds. If the individual does not include the interest in income in the years it is earned, he or she must include it in his or her income in the year in which the bonds are cashed in. However, when an individual cashes in certain savings bonds under an education savings bond program, he or she may be able to exclude interest from income.

An individual may be able to cash in qualified U.S. savings bonds without having to include in income some or all of the interest earned on the bonds if the following conditions are met:

1. The individual pays qualified education expenses for himself or herself, his or her spouse, or a dependent for whom he or she claims an exemption on his or her return;
2. The individual’s modified adjusted gross income (MAGI) is less than the amount specified for his or her filing status; and
3. The individual’s filing status is not married filing separately.

A. QUALIFIED U.S. SAVINGS BONDS

A qualified U.S. savings bond is a series EE bond issued after 1989 or a series I bond. The bond must be issued either in the individual’s name (as the sole owner) or in the name of both the individual and his or her spouse (as co-owners). The owner must be at least 24 years old before the bond’s issue date. The issue date is printed on the front of the savings bond. The issue date is not necessarily the date of purchase – it will be the first day of the month in which the bond is purchased (or posted, if bought electronically).
B. QUALIFIED EDUCATIONAL EXPENSES

Qualified education expenses include the following:

- Tuition and fees required to enroll at or attend an eligible educational institution. Qualified education expenses do not include expenses for room and board or for courses involving sports, games, or hobbies that are not part of a degree or certificate granting program;
- Contributions to a qualified tuition program (QTP); and
- Contributions to a Coverdell education savings account (ESA).

1. Adjusted Qualified Education Expenses

Taxpayers must reduce the qualified education expenses by all of the following tax-free benefits.

- Tax-free part of scholarships and fellowship grants.
- Expenses used to figure the tax-free portion of distributions from a Coverdell ESA.
- Expenses used to figure the tax-free portion of distributions from a QTP.
- Any tax-free payments (other than gifts or inheritances) received as educational assistance, such as:
  - Veterans’ educational assistance benefits;
  - Qualified tuition reductions; or
  - Employer-provided educational assistance.
- Any expenses used in figuring the American opportunity and lifetime learning credits.

C. ELIGIBLE EDUCATIONAL INSTITUTION

An eligible educational institution is any college, university, vocational school, or other postsecondary educational institution eligible to participate in a student aid program administered by the U.S. Department of Education. It includes virtually all accredited, public, nonprofit, and proprietary (privately owned profit-making) postsecondary institutions. The educational institution should be able to tell you if it is an eligible educational institution.

D. FIGURING THE TAX-FREE AMOUNT

If the total an individual receives when he or she cashes in the bonds is not more than the adjusted qualified education expenses for the year, all of the interest on the bonds may be tax free. However, if the total received when the bonds are cashed in is more than the adjusted expenses, only part of the interest may be tax-free.
Example

In February 2016, Mark and Joan Washington, a married couple, cashed a qualified series EE U.S. savings bond. They received proceeds of $9,000, representing principal of $6,000 and interest of $3,000. In 2016, they paid $7,650 of their daughter’s college tuition. They are not claiming an American Opportunity or lifetime learning credit for that amount, and their daughter does not have any tax-free educational assistance. Their MAGI for 2016 was $80,000.

\[
\begin{align*}
3,000 \times 7,650 \text{ expenses} & = 2,550 \text{ tax free interest} \\
9,000 \text{ proceeds} & \text{ interest}
\end{align*}
\]

They can exclude $2,550 of interest in 2016. They must pay tax on the remaining $450 ($3,000 – $2,550) interest.

E. EFFECT OF THE AMOUNT OF INCOME ON EXCLUSION

The amount of the individual’s interest exclusion is gradually reduced (phased out) based on the individual’s MAGI and filing status.

IV. TAX CREDITS FOR EDUCATION

There are two tax credits available to help individuals offset the costs of higher education. They are the American opportunity credit and the lifetime learning credit, also referred to as education credits. Only one of the credits can be elected each year for each student.

A. AMERICAN OPPORTUNITY CREDIT

With the passage of the American Recovery and Reinvestment Act of 2009 (ARRA), Congress expanded the prior Hope tax credit, now called the American opportunity credit. The expanded terms will apply to tax years 2009 and beyond. While the Hope credit could be applied to two years of postsecondary education, the expanded program allows the credit to be claimed for four years, and also expands income eligibility.

For parents or guardians to claim an American opportunity credit for their child’s college expenses, the student must be listed as a dependent on the tax form. If the student is not listed as a dependent on another person’s tax form, he or she can claim the credit.

The exact amount of the American opportunity credit also depends on a family’s income, the amount of qualified tuition and fees paid, and the amount of certain scholarships and allowances subtracted from tuition. The total credit is also based on how many eligible students are in a family. This differs from the lifetime learning credit which sets a maximum dollar amount for a family.
1. Qualifications

An eligible student must be enrolled at least half-time for at least one academic period at an eligible program leading to a degree or certificate at an eligible school and cannot have completed four years of undergraduate study. A taxpayer may claim the credit for himself or herself if he or she is not claimed as a dependent by another taxpayer. (Once again, this means that the eligible student may also be the eligible taxpayer.)

2. Application Process

To apply for the credit, taxpayers must report the amount of qualified tuition and fees paid as well as the amount of certain scholarships, grants, and untaxed income used to pay tuition and fees in 2014. Schools are required to send this information to each taxpayer and to the IRS by January 31, 2015, in the form of a 1098-T statement. Taxpayers use this information and their own records about tuition and fees paid when they fill out IRS form 8863 to claim the tax credit. The statement sent by the school will also include contact information for someone at the school who can answer questions about the information on the form. A taxpayer may wish to talk to a tax advisor for help in calculating the amount of the credit.

For exact directions for claiming the American opportunity credit, consult IRS Publication 970, Tax Benefits for Education.

3. Maximum Annual Credit Amount

- The maximum yearly credit per eligible student is $2,500.
- The American opportunity credit is partially refundable (40%), which means up to $1,000 could be paid back to lower-income taxpayers when the credit exceeds their total tax bill.

Generally, the credit is allowed for qualified education expenses paid in 2016 for an academic period that begins in 2016 or during the first three months of 2017 (e.g., paying in December 2016 for an academic period beginning in the first three months of 2017).

4. Multiple Benefits

A family may claim a lifetime learning credit, a American opportunity credit, and an exclusion from gross income for certain distributions from qualified state tuition programs or education IRAs as long as the same student is not used as the basis for each credit or exclusion and the family doesn’t exceed the lifetime learning maximum per family. There is no limit on how many family members can receive the credit.

5. Income Limits

For 2016, the amount of the credit begins to phase out if your modified adjusted gross income (AGI) is between $80,000 and $90,000 or more for a single return and between $160,000 and $180,000 or more for a joint return.
B. LIFETIME LEARNING CREDIT

The lifetime learning credit is a nonrefundable tax credit available to individuals who file a tax return and owe taxes. The amount of the credit is subtracted from the taxes owed, rather than reducing taxable income as with a tax deduction. Individuals who do not pay taxes are not eligible for a lifetime learning credit. If a taxpayer owes less in taxes than the amount of lifetime learning credit he or she is eligible for, the taxpayer is only eligible for a credit equal to the amount of taxes he or she owes.

A family may claim a tax credit of up to $2,000 per tax year for the taxpayer, taxpayer’s spouse, or any eligible dependents for an unlimited number of tax years. The amount of the lifetime learning credit is 20% of the first $10,000 of qualified educational expenses paid for all eligible students. Therefore, the maximum amount of a lifetime learning credit is $2,000. The lifetime learning credit is available for all years of postsecondary education and for courses taken to acquire or improve job skills, unlike the American opportunity credit which is only available for four years.

The actual amount of the credit depends on a family’s income, the amount of qualified tuition and fees paid, and the amount of certain scholarships and allowances subtracted from tuition. This credit is family-based (up to $2,000 per tax return), unlike the American opportunity credit which is based on the number of eligible dependents in a family.

1. Qualifications

The Taxpayer: An eligible taxpayer must file a tax return and owe taxes to claim the credit. The taxpayer must also claim the eligible student as a dependent unless the credit is for the taxpayer or the taxpayer’s spouse. (This means the eligible taxpayer may also be the eligible student.) In 2016, those with a modified Adjusted Gross Income (AGI) of $65,000 or more (if single), or $131,000 or more (for married taxpayers filing a joint return) cannot claim a lifetime learning credit. The lifetime learning credit amount is reduced gradually for families with incomes between $55,000 and $65,000 if single, or $111,000 and $131,000 if married and filing jointly. Taxpayers that claim the American opportunity credit or tuition and fees deduction for a student are not eligible to claim the lifetime learning credit for the same student.

An eligible student may be enrolled in an eligible program leading to an undergraduate or graduate degree at an eligible school during the calendar year OR may be enrolled in any course of instruction at an eligible school to acquire/improve the student’s job skills during the calendar year. Students may claim the credit themselves if they are not claimed as a dependent by another taxpayer. (Once again, this means that the eligible student may also be the eligible taxpayer.)

2. Claiming the Credit

To apply for the credit, the taxpayer must report the amount of qualified tuition and fees paid as well as the amount of certain scholarships, grants, and untaxed income used to pay the tuition and fees. Schools must send this information to taxpayers and to the IRS by January 31, 2017, in the form of a 1098-T statement. Taxpayers will use this information and their own records about tuition and fees paid when they fill out the IRS Form 8863 to claim the tax credit. The statement sent by the school will also include contact information for someone at the school who can answer questions about the information on the form. A taxpayer may wish to talk to a tax advisor for help in calculating the amount of its credit.
Generally, the deduction is allowed for qualified tuition and expenses paid in 2016 in connection with enrollment at an institution of higher education during 2016 or for an academic period beginning in 2016 or in the first three months of 2017. For instance, if you paid $1,500 in December 2016 for qualified tuition for a spring 2017 semester that begins in January 2017, that $1,500 can be used to figure the 2016 deduction.

3. Multiple Benefits

A family may claim a lifetime learning credit, a American opportunity credit, and an exclusion from gross income for certain distributions from qualified state tuition programs or Coverdell ESA as long as the same student is not used as the basis for each credit or exclusion AND the family does not exceed the lifetime learning maximum per family.

V. SCHOLARSHIPS, FELLOWSHIPS, GRANTS, AND TUITION REDUCTIONS

This section discusses the taxability of various types of educational assistance the individual may receive if he or she is studying, teaching, or researching in the United States. The educational assistance can be for a primary or secondary school, a college or university, or a vocational school. Included in the discussion are:

- Scholarships;
- Fellowship grants;
- Need-based education grants, such as a Pell Grant; and
- Qualified tuition reductions.

Many types of educational assistance are tax free if they meet the requirements discussed here.

A. SCHOLARSHIPS AND FELLOWSHIP GRANTS

A scholarship is generally an amount paid or allowed to, or for the benefit of, a student at an educational institution to aid in the pursuit of his or her studies. The student may be either an undergraduate or a graduate student. A fellowship grant is generally an amount paid for the benefit of an individual to aid in the pursuit of study or research.

The amount of a scholarship or fellowship grant includes the following:

- The value of contributed services and accommodations. This includes such services and accommodations as room (lodging), board (meals), laundry service, and similar services or accommodations that are received by an individual as a part of a scholarship or fellowship grant.

- The amount of tuition, matriculation, and other fees that are paid or remitted to the student to aid the student in pursuing study or research.

- Any amount received in the nature of a family allowance as a part of a scholarship or fellowship grant.

1. Tax-Free Scholarships and Fellowship Grants

A scholarship or fellowship grant is tax free (excludable from gross income) only if the student is a candidate for a degree at an eligible educational institution.

A taxpayer may be able to increase the combined value of an education credit and certain educational assistance if the student includes some or all of the educational assistance income in the year it is received.

A scholarship or fellowship grant is tax free only to the extent:
• It does not exceed the expenses;
• It is not designated or earmarked for other purposes (such as room and board), and does not require (by its terms) that it cannot be used for qualified education expenses; and
• It does not represent payment for teaching, research, or other services required as a condition for receiving the scholarship.

a. Candidate for a Degree

A student is a candidate for a degree if he or she:

1. Attends a primary or secondary school or are pursuing a degree at a college or university, or
2. Attends an educational institution that:
   a) Provides a program that is acceptable for full credit toward a bachelor’s or higher degree, or offers a program of training to prepare students for gainful employment in a recognized occupation; and
   b) Is authorized under federal or state law to provide such a program and is accredited by a nationally recognized accreditation agency.

b. Eligible Educational Institution

An eligible educational institution is one whose primary function is the presentation of formal instruction and that normally maintains a regular faculty and curriculum and normally has a regularly enrolled body of students in attendance at the place where it carried on its educational activities.

c. Qualified Education Expenses

For purposes of tax-free scholarships and fellowship grants, these are expenses for:

• Tuition and fees required to enroll at or attend an eligible educational institution, and
• Course-related expenses, such as fees, books, supplies, and equipment that are required for the courses at the eligible educational institution. These items must be required of all students in the course of instruction.

Qualified education expenses do not include the cost of:

• Room and board,
• Travel,
• Research,
• Clerical help, or
• Equipment and other expenses that are not required for enrollment in or attendance at an eligible educational institution.
Generally, a taxpayer cannot exclude from his or her gross income the part of any scholarship or fellowship grant that represents payment for teaching, research, or other services required as a condition for receiving the scholarship. This applies even if all candidates for a degree must perform the services to receive the degree.

The student does not have to treat as payment for services the part of any scholarship or fellowship grant that represents payment for teaching, research, or other services if he or she receives the amount under:

- The National Health Service Corps Scholarship Program,
- The Armed Forces Health Professions Scholarship and Financial Assistance Program, or
- A comprehensive student work-learning-service program operated by a work college.

**B. TAXABLE SCHOLARSHIPS AND FELLOWSHIP GRANTS**

If and to the extent the scholarship or fellowship grant does not meet the requirements described earlier, it is taxable and must be included in gross income.

**C. OTHER TYPES OF EDUCATIONAL ASSISTANCE**

The following discussions deal with other common types of educational assistance.

1. **Fulbright Grants**

A Fulbright grant is generally treated as a scholarship or fellowship grant in figuring how much of the grant is tax-free.

2. **Pell Grants and Other Title IV Need-Based Education Grants**

These need-based grants are treated as scholarships for purposes of figuring their tax treatment. They are tax free to the extent used for qualified education expenses during the period for which a grant is awarded.

3. **Payment to Service Academy Cadets**

An appointment to a United States military academy is not a scholarship or fellowship grant. Payment an individual receives as a cadet or midshipman at an armed services academy is pay for personal services. This must be included in the recipient's income in most cases.

4. **Veterans' Benefits**

Payments an individual receives for education, training, or subsistence under any law administered by the Department of Veterans Affairs (VA) are tax free.
5. Qualified Tuition Reduction

The term “qualified tuition reduction” means a tax-free reduction in tuition provided by an eligible educational institution. Whether a tuition reduction is a qualified tuition reduction, and therefore tax-free, depends on whether it is for education below or at the graduate level. The qualified tuition reduction must not represent payment for services.

Qualified tuition reductions for education below the graduate level (including primary and secondary school) are tax-free if provided to the following individuals who are treated as employees.

- A current employee of the eligible educational institution;
- A former employee who retired or left on disability;
- A widow or widower of an individual who died while an employee;
- A widow or widower of a former employee who retired or left on disability; or
- A dependent child or spouse of an individual described in the four items above.

Qualified tuition reductions apply to officers, owners, or highly compensated employees only if benefits are available to employees on a nondiscriminatory basis. This means that the tuition reduction benefits must be available on substantially the same basis to each member of a group of employees. The group must be defined under a reasonable classification set up by the employer. The classification must not discriminate in favor of owners, officers, or highly compensated employees.

Tuition reductions for graduate education are considered “qualified” and are tax-free if they are provided by an eligible educational institution to a graduate student who performs teaching or research activities for that institution. All other tuition reductions for graduate education are taxable.
### CHAPTER 18: TEST YOUR KNOWLEDGE

The following questions are designed to ensure that you have a complete understanding of the information presented in the chapter (assignment). They are included as an additional tool to enhance your learning experience and do not need to be submitted in order to receive CPE credit.

We recommend that you answer each question and then compare your response to the suggested solutions on the following page(s) before answering the final exam questions related to this chapter (assignment).

<table>

| 2. | Under what circumstances are distributions from a Coverdell ESA tax free: |
|    | A. whenever they are taken by the designated beneficiary               |
|    | B. so long as the beneficiary is a full-time student at the time they are taken |
|    | C. to the extent the distributions do not exceed that individual’s qualified education expenses |
|    | D. to the extent the distributions do not exceed more than the beneficiary’s normal living expenses |

| 3. | Which of the following is correct regarding a qualified tuition program: |
|    | A. it is only available to families with incomes below $200,000 per year |
|    | B. it allows money to grow tax free                                      |
|    | C. it can be used by any family regardless of income                     |
|    | D. both B and C above                                                    |

### CHAPTER 18: SOLUTIONS AND SUGGESTED RESPONSES

Below are the solutions and suggested responses for the questions on the previous page(s). If you choose an incorrect answer, you should review the pages as indicated for each question to ensure comprehension of the material.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 1. | **A.** Incorrect. There is no hard cap.  
**B.** Incorrect. While the annual amount that can be contributed is limited, the total number of accounts is not.  
**C.** Incorrect. There is no such limit.  
**D.** **CORRECT.** There is no limit to the number of accounts that can be established for a single beneficiary, although no more than $2,000 can be contributed annually to all of the accounts combined.  
*(See page 397 of the course material.)* |
| 2. | **A.** Incorrect. The monies must be used to pay for qualified education expenses.  
**B.** Incorrect. Being a full-time student is not sufficient to make all distributions tax-free.  
**C.** **CORRECT.** Only in this case are all of the distributions tax-free. This calculation includes all of the support the beneficiary received for his or her education for the year in question.  
**D.** Incorrect. The money is tax free only to the extent is covers certain qualified education expenses.  
*(See page 404 of the course material.)* |
| 3. | **A.** Incorrect. The so-called 529 college savings plans are available to any family, regardless of income.  
**B.** Incorrect. These programs allow families to put aside after-tax money and have it grow tax-free to pay for qualified education expenses. However, this is not the most correct answer.  
**C.** Incorrect. Any family can create and contribute to these plans, regardless of income. However, this is not the best answer.  
**D.** **CORRECT.** These are both attributes of so-called 529 college savings plans. There is, however, a lifetime cap on the amount of money that can be contributed to a plan. This amount differs from state to state.  
*(See page 406 of the course material.)* |
THIS PAGE INTENTIONALLY LEFT BLANK.
**A/B Trust:** A type of Living Revocable Trust used by married couples. In this type of living trust, two trusts (trust A and trust B) are created at the time the first spouse dies. By dividing the couple’s estate into two trusts at the first death, each spouse can pass the maximum amount of property allowed to avoid federal estate taxes.

**Adjusted Gross Estate:** Calculated by deducting estate settlement costs from the gross estate, also known as the taxable estate.

**Administrator:** The person appointed by the court to manage your estate when you die without leaving a will. Since the person is court appointed, he or she is required to post a bond as security. The person has the same duties as an executor. In some states, the position is called “personal representative.”

**Annual Exclusion:** The amount of property the IRS allows a person to gift to another person during a calendar year before a gift tax is assessed and/or a gift tax return must be filed. The amount is increased periodically.

**Annuity:** The right to receive a series of payments on a yearly basis or at other regular intervals for a certain or uncertain period. Generally the result of an annuity contract purchased by an individual.

**At-risk rules:** Rules that limit the amount of loss you may deduct to the amount you risk losing in the activity.

**Attestation Clause:** The clause in a will in which the witnesses certify that the will has been signed before them and describes how all parties signed the will.

**Back-end Load:** A sales charge (also known as a “deferred sales charge”) investors pay when they redeem (or sell) mutual fund shares, generally used by the fund to compensate brokers.

**Basis:** Basis is the amount of your investment in property for tax purposes. The basis of property you buy is usually the cost. Basis is used to figure gain or loss on the sale or disposition of investment property.

**Beneficiary:** An individual, institution, trustee or other entity designated in a will or trust to receive something of value.

**Cash Basis Method:** Method of determining when income must be reported and when expenses can be deducted. It is used by most individual taxpayers. Under the cash method, income is generally reported in the tax year money is received, and expenses are usually deducted in the tax year they are paid.

**Charitable Lead Trust:** An arrangement whereby the charity receives income from a trust for a period of years, and then the remainder is paid to non-charitable beneficiaries (generally either the donor or his or her heirs).
Charitable Remainder Trust: A trust used to make large donations of property or money to a charity so the person making the gift or donation can obtain a tax advantage. In a charitable remainder trust, the donor reserves the right to use the trust property during his life or some other specified time period, and when the agreed period is over, the property goes to the charity.

Closed-End Fund: A type of investment company that does not continuously offer its shares for sale but instead sells a fixed number of shares at one time (in the initial public offering) which then typically trade on a secondary market, such as the New York Stock Exchange or the Nasdaq Stock Market. Legally known as a “closed-end company.”

Codicil: Technically a written addition or amendment to a will. Must be executed according to all of the formalities that govern a will itself to be valid.

Community Property: In the 10 states which are community property states, it is the property – real and personal – that is co-owned by each spouse. The law in these states presumes that property acquired during marriage is community property and limits the right of one spouse to dispose of such property either during life or upon death.

Contingent Beneficiary: Beneficiary of a trust or will who is entitled to receive certain property only if the primary beneficiary dies or otherwise is rendered unable to take the property.

Corporation: A legal entity that has rights usually only reserved for individuals. The primary advantage of a corporation is that it provides its shareholders with a right to participate in the profits without any personal liability.

Corpus of a Trust: Literally “the body” of the trust. Used to refer to the money or property placed in a trust. Distinguished from the income produced by the trust.

Crummey Trust: An irrevocable trust in which a beneficiary possesses a right to withdraw some or all of the property contributed for a period of time (usually 30 days), after which time the power lapses and the property is governed by the terms of the trust document; the beneficiary’s right to withdraw is considered a gift of a present interest for gift tax purposes, thereby qualifying contributions for the gift tax annual exclusion; irrevocable life insurance trusts are usually Crummey trusts.

Death Tax: Also known as estate tax, levied on a decedent’s estate.

Decedent: An individual who has died.

Direct Skip: An outright generation-skipping transfer, either by gift or at death, to a recipient, known as a “skip person,” who is two or more generation levels below the transferor. This type of property transfer prompts the generation-skipping transfer tax.

Dividend: A distribution of money or other property made by a corporation to its shareholders out of its earnings and profits.
**Domicile:** The state of a person's principal residence. An individual's domicile determines which state law applies to his or her estate. Each person can have only one domicile. Generally determined based on where the individual intended to make his or her permanent home.

**Donee:** One who receives a gift.

**Donor:** An individual who makes a gift. Also referred to as trustor, grantor or settlor in certain circumstances.

**Estate:** The assets owned by a decedent at the time of his or her death are referred to as the estate.

**Estate Planning:** The process by which an individual determines how to divide his or her assets upon death or during his or her lifetime in anticipation of death.

**Estate Taxes:** Taxes imposed on the “privilege” of transferring property by reason of death. Estate tax is most commonly used in reference to the tax imposed by the Federal Government rather than the state government. Estate taxes are intended to raise revenue for the government and break up a family’s wealth, so that the nation’s wealth does not concentrate in the hands of a few families.

**Exchange Fee:** A fee that some mutual funds impose on shareholders if they exchange (transfer) to another fund within the same fund group.

**Exchange-traded Funds:** A type of an investment company (either an open-end company or UIT) whose objective is to achieve the same return as a particular market index. ETFs differ from traditional open-end companies and UITs, because, pursuant to SEC exemptive orders, shares issued by ETFs trade on a secondary market and are only redeemable from the fund itself in very large blocks (blocks of 50,000 shares for example).

**Executor/ Executrix:** The person (male/female) named in a will to manage a decedent’s estate. The more modern term is a “personal representative,” which removes any reference to the sex of the person.

**Fair Market Value:** The price at which an item can be sold at the present time between two unrelated people, neither under compulsion to buy or sell.

**Fiduciary:** A person with the legal duty to act primarily for another’s benefit in a position of trust, good faith, candor and responsibility.

**Fiduciary Duty:** The duty of a fiduciary to act in a position of trust, good faith, candor and responsibility, on behalf of another. The duty is one of the best defined responsibilities under the law and is very strictly enforced by the courts.

**Front-end Load:** An upfront sales charge investors pay when they purchase mutual fund shares, generally used by the fund to compensate brokers. A front-end load reduces the amount available to purchase fund shares.

**Future Interest:** An ownership interest in property in which unlimited possession or enjoyment of property is delayed until some future time.
**General Partnership:** A partnership that has only general partners and no limited partners. Each partner is liable for all partnership debts and there is no limited liability.

**Generation Skipping Transfer (GST):** A transfer of property, usually in trust, that is designed to provide benefits for beneficiaries who are two or more generations younger than the generation of the grantor.

**Generation-Skipping Transfer (“GST”) Tax:** A separate 40% flat rate federal transfer tax in addition to the gift and estate taxes imposed on transfers to persons two or more generations below the transferor; each transferor has $5,000,000 of inflation-indexed exemption from the GST tax.

**Generation Skipping Trust:** Any trust having beneficiaries who belong to two or more generations younger than the grantor.

**Gift:** Literally a gratuitous transfer of something of value from the owner to another person. To be a valid gift there must be intent, actual transfer to the donee or recipient of the gift and acceptance.

**Gift Taxes:** Taxes levied by the Federal Government on gifts. Gift taxes and estate taxes have been “merged” into a single tax called the “unified tax.”

**Grantor:** The person who establishes a trust and transfers assets into it. Other terms for the “grantor” include “trustor” and “settlor.”

**Gross Estate:** The total value of all property owned by a decedent at the time of his or her death.

**Hedge Fund:** A special type of investment fund with fewer restrictions on the types of investments it can make. Of note is a hedge fund’s ability to sell short. In exchange for the ability to use more aggressive strategies, hedge funds are more exclusive, i.e., fewer people, usually only the wealthy, are allowed to invest in hedge funds.

**Heirs:** Those persons who are entitled under the statutes of intestate succession to the property of a decedent. Also used to refer generally to beneficiaries of a will. Also known as “next of kin.”

**Index Fund:** Describes a type of mutual fund or Unit Investment Trust (UIT) whose investment objective typically is to achieve the same return as a particular market index, such as the S&P 500 Composite Stock Price Index, the Russell 2000 Index, or the Wilshire 5000 Total Market Index.

**Inherit:** To receive property from a deceased person.

**Insurance Trust:** An irrevocable trust used to hold insurance and pass it on to your heirs without any estate taxes on the death benefits of the policy.

**Inter Vivos:** Literally means during life. Refers to transactions, such as gifts, made during a person’s lifetime.

**Inter Vivos Trust:** Legal name for a living trust. The trust is set up by the grantor during his or her lifetime.

**Intestate:** A person who dies without having made and left a valid will.
**Intestate Succession:** The distribution of property to heirs according to the statutes of the state of residency upon the death of a person who owned the property but did not leave a valid will.

**Irrevocable Trust:** A trust that cannot be changed or terminated after it is established.

**Joint Tenancy:** A form of property ownership in which two people co-own property with an automatic right of survivorship. If one of the owners dies, the surviving owner automatically receives the deceased’s owner’s interest. This allows real property to pass without going through probate.

**Keogh:** A pension plan in the United States that allows a business to contribute a portion of profits into a tax-sheltered account.

**Limited Liability Company (LLC):** An entity formed under state law that has the legal protection of owners similar to a corporation and the tax status of a partnership.

**Limited Partner:** A partner in a limited partnership not involved in the active management of the enterprise.

**Limited Partnership:** One consisting of at least one general partner and at least one limited partner. Must be formed in accordance with applicable state law.

**Living Trust:** A written legal document into which an individual places all of his or her property, with instructions for its management and distribution upon his or her disability or death.

**Management Fee:** Fee paid out of mutual fund assets to the fund’s investment adviser or its affiliates for managing the fund’s portfolio, any other management fee payable to the fund’s investment adviser or its affiliates, and any administrative fee payable to the investment adviser that are not included in the “Other Expenses” category.

**Marital Deduction:** The tax law that allows a person to give an unlimited value of property as a gift, or leave an estate of unlimited value to his or her spouse without a gift or estate tax being assessed.

**Marked to Market Rule:** The treatment of each section 1256 contract held by a taxpayer at the close of the year as if it were sold for its fair market value on the last business day of the year.

**Medicare:** A nationwide, federally administered health insurance program to cover the cost of hospitalization, medical care, and some related services for most people over age 65, and other selected groups.

**Member:** The term used to describe the owner of an interest in a limited liability company.

**Member-managed Company:** A limited liability company that is managed by its owners. Unless specified otherwise in the articles of operation, a limited liability company is presumed to be managed by its members.

**Merger:** The process by which one business entity combines with another business entity.
**Mutual Fund:** The common name for an open-end investment company. Like other types of investment companies, mutual funds pool money from many investors and invest the money in stocks, bonds, short-term money-market instruments, or other securities. Mutual funds issue redeemable shares that investors purchase directly from the fund (or through a broker for the fund) instead of purchasing from investors on a secondary market.

**NAV (Net Asset Value):** The value of a mutual fund’s assets minus its liabilities. SEC rules require funds to calculate the NAV at least once daily. To calculate the NAV per share, simply subtract the fund’s liabilities from its assets and then divide the result by the number of shares outstanding.

**No-load Fund:** A fund that does not charge any type of sales load. But not every type of shareholder fee is a “sales load,” and a no-load fund may charge fees that are not sales loads. No-load funds also charge operating expenses.

**Open-end Company:** The legal name for a mutual fund. An open-end company is a type of investment company.

**Partnership:** A type of unincorporated business organization in which multiple individuals, called general partners, manage the business and are equally liable for its debts.

**Passive activity:** An activity involving the conduct of a trade or business in which you do not materially participate and any rental activity. However, the rental of real estate is not a passive activity if both of the following are true: (1) More than one-half of the personal services you perform during the year in all trades or businesses are performed in real property trades or businesses in which you materially participate; and (2) You perform more than 750 hours of services during the year in real property trades or businesses in which you materially participate.

**Pay on Death (POD):** Designation is the naming of a beneficiary to receive an account balance on a party’s death.

**Pour Over Trust:** One which exists separately and independently of the will and is designated to serve as a custodian of property which it receives from the will.

**Prospectus:** Describes the mutual fund to prospective investors. Every mutual fund has a prospectus. The prospectus contains information about the mutual fund’s costs, investment objectives, risks, and performance. You can get a prospectus from the mutual fund company (through its website or by phone or mail).

**Qualified Terminable Interest Property (“QTIP”):** An irrevocable trust for the benefit of the grantor’s spouse which qualifies for the gift and/or estate tax marital deduction; must provide that spouse receives all of the trust accounting income at least as often as annually for life (e.g., cannot provide for reduction or cessation of income interest in the event of spouse’s remarriage) and that no other person has any interest in the trust while the spouse is alive; principal benefit is that the grantor can control the disposition of the trust property at the spouse’s death and still obtain the gift and/or estate tax marital deduction.
**Revocable**: A trust in which the trustor (maker of the trust) has, by the terms of the trust agreement, reserved the power to alter, amend or terminate the trust and to receive the property back from the trustee.

**Revocable Living Trust**: A living trust or inter vivos trust that can be amended and revoked, usually by the person who established the trust. This trust may become irrevocable and unamendable when the only person who can amend or revoke the trust dies or becomes incompetent.

**Revocable Trust**: A trust which can be amended or revoked by the person(s) who established the trust.

**S Corporation**: A special type of corporation in which shareholders receive the benefits of pass-through taxation generally available to partnerships while still maintaining limited liability. A number of requirements limit the type of entities eligible for this type of federal tax treatment.

**Sales Charge (or “Load”)**: The amount that investors pay when they purchase (front-end load) or redeem (back-end load) shares in a mutual fund, similar to a commission. The SEC’s rules do not limit the size of sales load a fund may charge, but the NASD’s rules state that mutual fund sales loads cannot exceed 8.5% and must be even lower depending on other fees and charges assessed.

**Separate Property**: In community property states, all property which is not held commonly by a married couple is considered separate property. In general, it is property owned by one spouse in which the other spouse does not own an interest.

**Settlor**: A person who establishes a trust. The term settlor is used interchangeably with the terms “trustor” and “grantor.”

**Short Sale**: The sale of shares of a security that the seller does not own. Such sales are made in anticipation of a decline in the price of the security to enable the seller to cover the sale with a purchase at a later date, at a lower price, and thus at a profit.

**Sole Proprietorship**: A business owned and operated by one person. The business has no legal existence separate from that of the owner.

**Spendthrift**: An individual who cannot handle money wisely and spends it wastefully.

**Spendthrift Trust**: One designed to provide for the needs of a spendthrift while protecting the corpus of the trust.

**Split Gift**: Each spouse is entitled to give any individual $14,000 in a calendar year without tax consequences. If a married couple tries to give more than $14,000 to an individual, they must file a gift tax form declaring that the gift is split between them.

**Spouse**: Legal term for a married person, either a husband or wife.

**Surviving Spouse**: The husband or wife that lives after the death of his or her spouse.
**Taxable Estate:** The portion of an estate that is subject to federal estate taxes or state death taxes. Technically, all of an estate is subject to federal estate taxes, but because of the unified credit, only estates with a value over the exemption equivalent amount actually have to pay any estate taxes.

**Term Life Insurance:** Type of life insurance that provides temporary protection for a specified number of years.

**Testamentary Trust:** A trust, set up in a will, which does not become effective until the death of the testator.

**Trust:** A legal document by which one person, called the trustor, donor, grantor or settlor, places property in the title of the trust for the benefit of himself or another. Normally involves trustor, trustee, who is charged with managing the trust, and beneficiary, in whose behalf the trust is established.

**Trustee:** The person or institution that manages trust property under the terms of the trust.

**Trustor:** A person who establishes a trust. The term trustor is used interchangeably with the “settlor” and “grantor” or “donor.”

**Unified Credit:** A tax credit is given to each person by the IRS to be used during his or her life or after his or her death. The tax credit equals the amount of tax (gift or estate) which is assessed on the exemption equivalent value of property. It is considered the “unified” credit because it applies to both gift taxes and estate taxes.

**Uniform Gifts (Transfers) To Minors Act (UGMA or UTMA):** A method to hold property for the benefit of a minor, which is similar to a trust but the rules are governed by state law.

**Unit Investment Trust (UIT):** A type of investment company that typically makes a one-time “public offering” of only a specific, fixed number of units. A UIT will terminate and dissolve on a date established when the UIT is created (although some may terminate more than fifty years after they are created). UITs do not actively trade their investment portfolios.

**Universal Life Insurance:** Life insurance which combines the low-cost protection of term insurance with a savings component that is invested in a tax-deferred account, the cash value of which may be available for a loan to the policy holder.

**Warrant:** A certificate issued by a company giving the holder the right to purchase securities at a stipulated price within specific time limits or with no expiration date (perpetual warrant). A warrant is sometimes offered by a company as an inducement to buy.

**Wash Sale:** The purchase and sale of a security either simultaneously or within a short period of time, often in order to recognize a tax loss without altering one’s position.

**Whole Life Insurance:** A contract with both insurance and investment components.

**Widows Allowance:** The amount allowed by court order to be paid a decedent’s widow and family from estate assets under administration.

**Yield:** The annual return on an investment, expressed as a percentage.
